State of the Plan

Purpose of the Iran Prosperity Project (IPP)

The Iran Prosperity Project (IPP) provides a detailed and actionable plan and recommendations, proposed by top experts inside and outside the country with intimate and first-hand knowledge about Iran, to stabilize and rebuild the country after the fall of the Islamic Republic. It seeks to inspire the people of Iran, the global Iranian diaspora, and the international community to imagine and realize the full potential of a free and prosperous Iran.

IPP Project Timeline

IPP was initiated in 2024. The first batch of whitepapers was published in May 2025. Unlike the initial publications, which followed a more traditional research timeline, we are now sharing drafts earlier in their development to meet the urgency of the moment.

IPP Overview

IPP consists of two sections - Foundational Stabilization & Industrial Revitalization. Within each section, there are 3 subsections:

FOUNDATIONAL STABILIZATION

- 1. Economic
- 2. Social
- 3. Government

INDUSTRIAL REVITALIZATION

- 4. Energy & Resources
- 5. Manufacturing
- 6. Services

The **Foundational Stabilization** section ensures a smooth political and administrative transition, laying the groundwork for long-term reform. Each of its three subsections addresses ~five key subject areas, for a total of ~15 whitepapers. These are authored by subject-matter experts and undergo a rigorous peer review process.

Each subject (Budget, Foreign Policy, etc.) is approached across three time horizons:

- **Emergency Phase:** The first ~100-180 days post-regime change
- **Transitional Period:** The first 2–3 years
- **Long Term:** A vision for a stable and flourishing future

To simplify, what this booklet does is connect each subject's elements that pertain to the Emergency Phase: imagine the work as a three-layer cake, Emergency Phase, Transitional Period, and Long Term. Each "slice" (subject) has been developed individually. **Now, in light of current events, we are accelerating the assembly of the "Emergency Phase layer" across all subjects into a unified booklet for the first 100-180 days.**

The Industrial Revitalization section follows the groundwork laid by stabilization. The IPP team has drafted an initial industrial policy blueprint, identifying priority industries for Iran's economic renewal.

This will be followed by an open-source project competition, inviting entrepreneurs, investors, and institutions to propose specific, actionable ventures aligned with our industrial vision. IPP will provide the structure, evaluation framework, and prioritization criteria to guide this process.

1. Transitional Government Objectives

1. Do no harm
2. Normalize Foreign Relations
3. Stabilize the country
4. Manage the basic government operations
5. Lay the groundwork for rapid and sustainable growth

2. Top Areas of Focus

1. **Military & Security:** Establishing control & chain of command
2. **Government Continuity:** Providing basic government services
3. **Legal Framework:** Creating short-term legal structures
4. **Monetary and Financial Framework:** Managing budgeting, banking, and markets
5. **Social Services:** Maintaining welfare and healthcare

3. Political Process and Framework for Transition From the Islamic Republic

Prior to the Fall of the Islamic Republic

1. At a time when Iran is in a revolutionary state and the Islamic Republic regime is making its final attempts to exert control over the Iranian people, Crown Prince Reza Pahlavi, in his role as the leader of the national uprising (hereinafter “Leader of the National Uprising”) and with the aim of overseeing the transitional period, establishes two institutions:
 - 1.1. National Uprising Council: This council shall serve as an advisory body and act as the policy and decision-making arm of the Leader of the National Uprising. Members will be chosen from both inside and outside Iran.
 - 1.2. Temporary Executive Team: This team shall be responsible for implementing policies and executing the decisions of the Leader of the National Uprising. Members will be chosen from both inside and outside Iran.
2. Due to security concerns stemming from the Islamic Republic’s notorious record of eliminating dissidents, the members’ identities shall not be disclosed until the fall of the regime.

After the Fall of the Islamic Republic

3. Following the fall of the Islamic Republic through a national revolution by the people of Iran with the support of honorable military and law enforcement forces, the country shall be governed during the transitional period by the Transitional System (comprising three institutions), under the leadership of the Leader of the National Uprising. The three institutions include the National Uprising Council (serving as the legislative branch), the Transitional Government (serving as the executive branch), and the Transitional Divan (serving as the judiciary).
4. The appointment and dismissal of the heads of all three institutions shall take place only after the proposal by the National Uprising Council (which requires an absolute majority vote of its members) and the approval of the Leader of the National Uprising. The following three sections discuss each of the three institutions separately.

A. National Uprising Council

5. In addition to its role outlined in paragraph 1.1, the National Uprising Council shall serve as the legislative branch during the transitional period.
6. Members of the National Uprising Council, reflecting the diversity of the united Iranian nation, will be appointed by the Leader of the National Uprising. Any changes to the total number of members or the removal of a member shall require an absolute majority vote by the Council and approval from the Leader of the National Uprising.
7. The Council's responsibilities include, but are not limited to:
 - 7.1. Assessing all institutions and organizations from the Islamic Republic era to decide which must be dissolved and which can be retained (with or without reforms).
 - 7.2. Reorganizing the command structure of the armed forces.
 - 7.3. Identifying the laws that must be annulled after the fall of the regime and those that can remain in force until the "Mahestan" (National Parliament—see paragraph 12.9.1) is formed, details of which are set out in the White Paper titled "Legal Process and Framework for Transition from the Islamic Republic."^[1]
 - 7.4. Enacting temporary laws necessary for managing the country during the transitional period.
 - 7.5. Reviewing and approving the national budget proposed by the Transitional Government.
 - 7.6. Adopting a general policy on necessary changes to be implemented in textbooks across all education levels (primary, secondary, and higher education) to ensure these textbooks align with the country's new direction.
 - 7.7. Deciding the total number of seats in the Constituent Assembly and the eligibility requirements for candidates (such as the minimum age and educational qualifications), who will be elected through an election that meets international democratic standards (discussed below, paragraph 12.8). It is recommended that the total number of seats be no fewer than 70 and no more than 310. These matters shall be decided before the referendum on the system of government (discussed below, paragraph 12.6), so that the public and political parties can engage in a national dialogue regarding the election in the period between the referendum and the Constituent Assembly election.

7.8. Restoring the independence of the Iranian Bar Association and allocating a budget for the Legal Aid Office, which operates under the Bar Association's oversight. This allocation aims to expand legal assistance to the underprivileged and reduce the harm they may suffer due to rapid legal changes during the transitional period. This budget allocation shall not infringe on the Bar Association's independence.

8. Once the Mahestan is duly formed, the legislative function of the National Uprising Council will cease to exist. However, the Council shall continue to serve as the advisory body to the Leader of the National Uprising until the dissolution of the Transitional Government, which will also mark the dissolution of the Council (discussed below, paragraph 12.10).

B. Transitional Government

9. The Transitional Government will serve as the executive branch during the transitional period.

10. Ministers shall be appointed by the Head of the Transitional Government, pending approval by an absolute majority of the National Uprising Council.

11. The structure of the Transitional Government (such as the number of ministries, organizations, and institutions) shall be devised by the Transitional Government in due course, after consulting with the National Uprising Council and obtaining the approval of the Leader of the National Uprising.

12. The responsibilities of the Transitional Government include, but are not limited to:

12.1. Executing laws and managing the daily affairs of the country and its people.

12.2. Protecting and defending Iran's borders through the military and law enforcement agencies.

12.3. Maintaining internal security through law enforcement agencies.

12.4. Managing the country's international affairs, including the following:

12.4.1. Taking control of Iranian embassies and consulates worldwide and deploying temporary diplomatic personnel.

12.4.2. Replacing Iran's representatives in all international organizations where Iran is a member.

12.4.3. Managing and protecting Iran's assets abroad.

- 12.4.4. Negotiating with the United Nations, the European Union, other governments, and international institutions to lift all sanctions against Iran (including financial, trade, human rights, and military sanctions) as well as visa restrictions against Iranians.
 - 12.4.5. Reviewing Iran's international and regional commitments, particularly in the Middle East, to ensure they align with the country's new direction.
 - 12.4.6. Making necessary changes to Iranians' passports and other travel documents.
- 12.5. Implementing necessary changes to textbooks across all education levels (primary, secondary, and higher education) in accordance with the educational policies adopted by the National Uprising Council (discussed above, paragraph 7.6).
- 12.6. Holding a referendum on the system of government: The Transitional Government shall hold, within a period of four months, a referendum for the nation to choose the system of government, namely, a democratic monarchy or a democratic republic.
 - 12.6.1. Political parties and activists supporting either system shall have at least three months (within the four-month period) to present and promote their preferred option to the public.[2] Entities and organizations of the Transitional Government, such as public media outlets, shall ensure impartial treatment of supporters of both systems and provide them with equal time and access.
 - 12.6.2. This referendum shall meet international democratic standards and be accessible to all eligible Iranian voters.
- 12.7. Holding a referendum on the fate of the leaders of the Islamic Republic: The Transitional Government shall hold a referendum—simultaneously with the referendum on the system of government discussed in the previous paragraph—so that the nation can determine the fate of the Islamic Republic leaders (political, military, security, and economic).[3] At a minimum, two options shall be presented to the Iranian people:
 - 12.7.1. Public trials and punishment of regime leaders, to be conducted in accordance with international standards, with the goal of delivering justice, alleviating victims' suffering, preventing acts of vengeance, and ensuring deterrence against future atrocities; or
 - 12.7.2. National amnesty, with the goal of accelerating the transition process.

If the nation chooses the first option—public trial and punishment—the “Truth Commission” shall be established by the Temporary Divan and commence its work immediately (discussed below, paragraph 16.5). It should be noted that this process (the referendum, the Truth Commission, and public trials or national amnesty) pertains solely to the criminal aspects of the actions committed by the leaders of the regime and does not negate the private rights of the victims or their families. Furthermore, this process applies only to crimes committed before the fall of the regime. If, after the fall, the leaders of the Islamic Republic take any action—by any means—against national security, public safety, or the Transitional System, this shall be considered a new crime, allowing the prosecution and trial of those leaders in a process independent from the one discussed here.

12.8. Holding an election for the Constituent Assembly: Within two months of receiving the results of the referendum on the system of government (discussed above, paragraph 12.6), the Transitional Government shall hold the election for the Constituent Assembly. This election shall meet international democratic standards and be accessible to all eligible Iranian voters. The Constituent Assembly’s mandate is to draft, within six to 12 months, a new constitution based on the system of government chosen by the nation in the referendum. In doing so, the Constituent Assembly shall—

12.8.1. Seek input from expert committees on topics such as the economy, industry, society and culture, family, education, environment, defense, and national security.

12.8.2. Appoint a seven-member panel of distinguished legal scholars, including three constitutional law experts, and consult with the panel when drafting each article of the constitution. This is to ensure that the text of the new constitution meets the highest legal standards.

12.8.3. Widely disseminate each drafted article. This aims to continually inform the public about the process and also to gather and incorporate their feedback into the drafting process.

12.9. Holding a referendum on the proposed constitution: Once the proposed constitution is finalized, the Transitional Government shall hold a constitutional referendum within one month. This referendum shall meet international democratic standards and be accessible to all eligible Iranian voters.

- 12.9.1. If the nation rejects the proposed constitution, the Constituent Assembly shall revise it within three months, considering public input. The revised version shall then be submitted for another referendum. If the nation rejects the proposed constitution a second time, the Constituent Assembly shall be dissolved, and the Transitional Government shall hold an election for a new Constituent Assembly within one month.
- 12.9.2. If the nation approves the proposed constitution—
 - 12.9.2.1. The Transitional Government shall hold a parliamentary election for the Mahestan within two months.[4] This election shall meet international democratic standards and be accessible to all eligible Iranian voters.
 - 12.9.2.2. The Constituent Assembly shall be adjourned until the Head of State (the Monarch or the President) is selected, at which point they will be sworn in before the Constituent Assembly. The Constituent Assembly will then be dissolved.
- 12.10. Charting the path for the elected government: The Transitional Government shall act according to one of the following scenarios, depending on the system of government chosen by the nation:
 - 12.10.1. If a monarchy is chosen, the Transitional Government shall organize the coronation ceremony within two months. Afterward, the Prime Minister and Cabinet shall be sworn in under the new constitution. The Transitional Government will then dissolve.
 - 12.10.2. If a republic is chosen, the Transitional Government shall hold the presidential election simultaneously with the Mahestan election (discussed above, paragraph 12.9.2). According to the new constitution, the President-Elect shall be sworn in and—
 - 12.10.2.1. If the new constitution has established a parliamentary republic, the Prime Minister and Cabinet shall then be sworn in, after which the Transitional Government will dissolve.
 - 12.10.2.2. If the new constitution has established a presidential republic, the President shall nominate a Cabinet for confirmation by the Mahestan.

Upon the Cabinet's swearing-in, the Transitional Government will dissolve.

C. Transitional Divan

13. Considering the Iranian people's desire to replace foreign terms with correct Persian equivalents, this White Paper uses the term "Divan" instead of "Qoveh Qaza'ieh." Likewise, it uses the title "Dadgah-e Aali Keshvar" instead of "Divan-e Aali Keshvar," and "Dadgah-e Edalat-e Edari" instead of "Divan-e Edalat-e Edari."
14. The Transitional Divan shall serve as the judicial branch during the transitional period.
15. The Head of the Divan shall be a respected and distinguished jurist, preferably a judge, whose appointment and dismissal shall be in accordance with the procedure set out in paragraph 4 of this White Paper.
16. The responsibilities of the Head of the Transitional Divan include, but are not limited to:
 - 16.1. Appointment and dismissal of the following officials: Chief Justice of the Supreme Court, Chief Justice of the Administrative Justice Court, Attorney General, Head of the National Inspectorate, Head of the Prisons and Correctional Facilities Organization, Head of the National Forensic Medicine Organization, and Head of the Deeds and Properties Registration Organization.
 - 16.2. Establishing a council entitled the "Judicial Council", which—
 - 16.2.1. Shall be responsible for reviewing the rules governing the appointment and dismissal of judges and prosecutors, and for overseeing their appointments and dismissals nationwide.
 - 16.2.2. Shall consist of five members: two judges, one prosecutor, one attorney, and one law professor. All members shall be chosen from respected and distinguished professionals in their fields. During their tenure, they shall not engage in judicial, prosecutorial, legal practice, or academic work.
 - 16.3. Establishing an organization entitled the "Budget Organization of the Divan": This organization aims to ensure the judiciary's financial independence from the executive branch. Its responsibilities include:
 - 16.3.1. Drafting the Divan's annual budget.

- 16.3.2. Submitting the draft budget to the Head of the Divan for review and approval.
- 16.3.3. Submitting the approved draft budget to the Transitional Government for inclusion in the national budget bill, which shall then be submitted to the National Uprising Council for final approval. It should be noted that—
 - 16.3.3.1. Without the Budget Organization’s approval, the Transitional Government may not change any part of the Divan’s proposed budget.
 - 16.3.3.2. If the National Uprising Council has any questions regarding the Divan’s proposed budget, the Budget Organization of the Divan shall appear independently (from the Transitional Government) to defend its proposal.
- 16.3.4. Overseeing the budget spending in the Divan and reporting any violations to the National Inspectorate.
- 16.4. Approving the draft annual budget proposed by the Budget Organization of the Divan (see above, paragraph 16.3.2).
- 16.5. Establishing a commission entitled the “Truth Commission” led by a respected and distinguished person: If, in the referendum on the fate of the Islamic Republic leaders (discussed above, paragraph 12.7), the nation chooses the public trial option, the “Truth Commission” shall be established to examine the records of the regime leaders across the political, military, law enforcement, and economic sectors. The responsibilities of the Truth Commission include, but are not limited to:
 - 16.5.1. Collecting, documenting, and verifying evidence of crimes committed against the Iranian people and any embezzlement of public funds. The findings are referred to as the “Initial Report.” To prevent delays in delivering justice, once the Initial Report on any of the regime leaders is finalized, it shall proceed to the next step.
 - 16.5.2. Submitting the Initial Report to the Head of the Transitional Divan for review and comments. The outcome is referred to as the “Truth Commission’s Report.”
 - 16.5.3. Submitting the Truth Commission’s Report to the Leader of the National Uprising, the National Uprising Council, and the Transitional Government for their review and comments. The outcome is referred to as the “Truth Commission’s Final Report.”

- 16.5.4. Submitting the Truth Commission's Final Report to the Attorney General to initiate the public trial of the relevant leader.
- 16.5.5. Widespread public dissemination of the Truth Commission's Final Report for public awareness.

Timeline

- 17. The process detailed in this White Paper is expected to take between 18 and 36 months. In the event of unforeseen circumstances, such as natural disasters or war, the timeline may be extended. However—
 - 17.1. Any extension beyond six months shall be approved by all three transitional institutions (the National Uprising Council, the Transitional Government, and the Transitional Divan) and the Leader of the National Uprising.
 - 17.2. Any extension beyond 12 months shall also require a national referendum for the nation's approval.

Endnotes

- [1] D.L.B., *IPP White Paper - Legal Process and Framework for Transition from the Islamic Republic*, 4th ed (July 22, 2025).
- [2] This schedule aims to balance two priorities: allowing sufficient time for a national discussion about an important issue on the one hand, and preventing a lengthy transitional period on the other hand.
- [3] The term "leaders" does not include managers and administrative staff, whether civilian or military.
- [4] Considering the Iranian people's desire to replace foreign terms with correct Persian equivalents, this White Paper uses the term "Mahestan" instead of "Majles Shura."

4. Legal Process and Framework for Transition From the Islamic Republic

Executive Summary

1. This White Paper outlines potential legal frameworks for managing daily affairs in Iran by the “Transitional System”[1] following the overthrow of the Islamic Republic regime.[2] It presents and evaluates three options to determine the optimal framework given the unique challenges that Iran faces.

Potential Legal Frameworks

2. Three legal frameworks are available:
 - 2.1. Restoring Option: It repeals all laws enacted by the Islamic Republic authorities and immediately reinstates the laws in force during the reign of Mohammad Reza Shah Pahlavi.
 - 2.2. Retaining Option: It retains the Islamic Republic laws, deferring modernization to an elected parliament in the future.
 - 2.3. Hybrid Option: It retains the Islamic Republic laws by default during the transitional period while repealing specific laws and provisions that either symbolize the Islamic Republic or impede the Transitional System’s progress.
3. This White Paper demonstrates that the Hybrid Option best meets the key criteria for an ideal framework, which include: (a) being practical, i.e., the framework must be executable by the Transitional System while allowing it to perform other critical tasks; (b) being stabilizing, i.e., the framework must ensure continuity and stability in the daily lives of the Iranian people; and (c) being promising, i.e., the framework must inspire hope for a better future and boost confidence in the Transitional System.

Origin of the Hybrid Option

4. The Hybrid Option does not draw inspiration from notable examples of regime change over the past five decades, such as the 1991 dissolution of the Soviet Union, the 2003 removal of Saddam Hussein in Iraq, or the 2011 revolutions in Tunisia and Egypt. Although those countries

experienced significant political changes, their legal systems did not undergo the same ideological transformation that the Iranian legal system did after the 1979 Islamic Revolution, which enforced a shift that can only be described as fundamental and substantive.

5. Instead, the Hybrid Option takes inspiration from Britain's experience with Brexit. Although it did not involve a regime change, Brexit led to fundamental and substantive changes in the British legal system. During the transitional period following its departure from the European Union ("EU"), Britain retained all EU laws applicable on the Exit Day as its domestic law while repealing key symbolic EU laws (e.g., the European Communities Act 1972) on the same day. This approach provided legal stability while also signaling a decisive break from the EU.

Proposed Legal Framework

6. The proposed legal framework for the transitional period includes the following three parts:
 - 6.1. Part 1: Dissolving the Constitution of the Islamic Republic along with all (or several of) its institutions.[3] This action officially establishes the Transitional System and signifies a clear departure from the old regime, garnering international recognition and support.
 - 6.2. Part 2: Retaining all existing laws except those explicitly repealed in *Part 3* or announced at later stages. This approach ensures stability and prevents legal chaos during the transitional period.
 - 6.3. Part 3: Repealing specific laws and provisions that blatantly contradict the values symbolized by the slogan of the Iranian modern revolution: *Woman, Life, Freedom / Man, Homeland, Prosperity*. These six words serve as six bases for identifying laws to be repealed, ensuring alignment with national aspirations and promoting unity and confidence.
7. The proposed framework provides a balanced, pragmatic, and hopeful approach for the transitional period. By combining legal continuity with targeted repeals, it offers a pathway to stability and renewal, setting the stage for a democratic future.

I. Context And Definitions

8. Generally, under the Principle of Continuity of Laws, laws enacted during an overthrown regime are not automatically invalidated after the dissolution of its constitution unless those laws are explicitly tied to the regime's ideology. Therefore, civil, criminal, and administrative laws

normally remain in effect until a new legal authority formally repeals them. However, in the case of the Islamic Republic regime, most statutes (notably, portions of the Civil Code and the entirety of the Islamic Penal Code) are inseparable from the regime's religious and political ideologies. Therefore, these statutes would automatically lose validity upon the dissolution of the Constitution of the Islamic Republic, potentially even undermining the validity of certain legal instruments and deeds issued under such statutes. This scenario would inevitably lead to chaos, underscoring the need for a comprehensive legal framework to prevent such an outcome.

9. When formulating a legal framework for Iran, two competing imperatives must be reconciled: the legitimate desire to immediately eliminate the Islamic Republic's retrograde laws on the one hand, and the critical need to maintain stability during the transitional period (which may last up to three years) on the other hand. The goal is to establish an optimal framework that effectively balances these competing needs.
10. To avoid misunderstanding, the term "optimal framework" in this White Paper refers to a legal framework that meets the following three criteria:
 - 10.1. Practical: The framework must be feasible for the Transitional System to implement, given its extensive responsibilities.
 - 10.2. Stabilizing: It must ensure continuity and stability in the nation's daily affairs during the transitional period.
 - 10.3. Promising: It must inspire hope and confidence among the Iranian people. The absence of this psychological element, even if the other two criteria are met, could lead to collective frustration, ultimately hindering the success of the Transitional System.
11. With these criteria in mind, the following sections will explore the legal frameworks available and identify the one that best meets these criteria.

II. Possible Legal Frameworks

12. There are three possible options for the legal framework during the transitional period:
 - 12.1. The Restoring Option, which—

- repeals all laws enacted by the Islamic Republic law-making authorities, based on the premise that these laws are rooted in illegitimate power, corruption, incompetence, and discrimination; and
- immediately reinstates the laws in force during the reign of Mohammad Reza Shah Pahlavi.

12.2. The Retaining Option, which—

- retains the laws of the Islamic Republic; and
- leaves the task of modernizing the laws to a future elected parliament.

This approach was initially adopted by the transitional government in Syria, following the overthrow of President Bashar Al-Assad. However, more recently, it appears to have changed course, as it has begun legislating and enforcing new policies, especially in the economic and educational sectors.

12.3. The Hybrid Option, which—

- retains the laws of the Islamic Republic by default, during the transitional period; but
- repeals immediately specific laws and provisions that symbolize the Islamic Republic or hinder the Transitional System's success.

13. The Hybrid Option is the only framework that meets the three optimal criteria outlined earlier: being practical, stabilizing, and promising. The following sections explain why.

A. The Restoring Option

14. Repealing the laws of the Islamic Republic and reinstating the Imperial laws is not suitable for the transitional period and, therefore, this White Paper does not recommend it. This is because, while this option seems appealing, it would lead to legal chaos since it fails to meet the first two wings of the optimal criteria: being practical and stabilizing.
15. The Islamic Republic has ruled over Iran for approximately fifty years, during which significant changes have transformed people's lives worldwide, including in Iran. Examples include the rise of new technologies, novel forms of transactions, and scientific breakthroughs—none of which existed half a century ago, and thus no relevant laws were in place at that time. Throughout this period, the Islamic Republic has enacted numerous laws to keep pace with these changing needs. These laws, albeit ineffective and unscientific, play an important role by filling legal gaps.

16. One of the key goals during the transitional period is to ensure stability in the daily affairs of the Iranian people (the stabilizing criterion). Repealing all laws of the Islamic Republic undermines this goal, as it would create a legal vacuum that Imperial-era laws cannot adequately fill. The only way to address such a vacuum would be for the Transitional System to enact a vast array of new laws—a task that is impractical given the scale of its other priorities (the practicality criterion).
17. A question arises whether the same logic applies to the more traditional components of the legal system, such as the Civil Code and the Penal Code. At the very least, could these Codes be replaced with their Imperial-era versions? While this appears attractive, such a replacement would present two significant challenges. First, the current versions of these Codes are intertwined with hundreds of rules and regulations that would cease to function without the current versions of the Codes. Second, a five-decade gap means the current generation of lawyers and judges lacks familiarity with the Imperial-era versions of those Codes. Attempting an overnight replacement of these Codes would likely result in judicial paralysis.
18. It is crucial to emphasize that the above analysis does not suggest that the existing laws of the Islamic Republic should remain unchanged indefinitely. These laws—being retrograde, unscientific, and discriminatory—must indeed be replaced. The question is one of timing. The transitional period is not the right time for such a sweeping overhaul. Instead, once a new parliament is elected, the Imperial laws could provide a valuable starting point for debates on modernizing Iranian laws to align with the nation’s contemporary needs and aspirations.

B. The Retaining Option

19. This framework involves retaining laws of the Islamic Republic during the transitional period and deferring their modernization to a future elected parliament. This White Paper does not recommend this option either. Despite meeting the first criterion (being practical and easy to implement), it fails to meet the third criterion (raising public hope and confidence).
20. A significant portion of the frustration and even animosity that Iranians feel toward the Islamic Republic stems from how the existing laws have made their daily lives an unbearable challenge. Given that the transitional period could extend up to three years, adopting the Retaining Option would deprive the Iranian people of the sense of change they seek in their daily lives, potentially resulting in collective dissatisfaction.

21. Furthermore, several laws (such as those discriminating against women, imposing the death penalty, mandating corporal punishments, and restricting internet access) fundamentally contradict the notion of a new era for the nation.

C. The Hybrid Option

22. This hybrid framework consists of two key parts: retaining the current laws as default during the transitional period, while selectively repealing those laws and legal provisions that either symbolize the Islamic Republic or hinder the success and operation of the Transitional System. This White Paper recommends the Hybrid Option because it satisfies all three criteria for an optimal framework:
 - 22.1. Practical: The framework minimizes the workload of the Transitional System, making it feasible to implement without overburdening the System's resources.
 - 22.2. Stabilizing: By maintaining continuity in the Iranian people's daily affairs, the framework ensures stability until new laws can be enacted.
 - 22.3. Promising: Repealing specific laws associated with the Islamic Republic provides visible evidence of progress, boosting the nation's hope and confidence that the Transitional System is steering them in the right direction.
23. The next consideration is whether the Hybrid Option is inspired by examples from notable regime changes over the past five decades.

III. Examples From Other Jurisdictions

A. Soviet Union, Iraq, Tunisia, and Egypt

24. Examining significant regime changes in other countries reveals that their experiences offer limited guidance for Iran. This is because the challenges Iran faces are different from those faced by other countries. The 1979 Islamic Revolution in Iran not only changed the country's political system but also fundamentally and substantively changed its legal system.[4] No comparable ideological change took place in the legal systems of other nations.
25. Consider the Egyptian revolution of 2011, which followed the Arab Spring. While it changed Egypt's political landscape, its legal system did not undergo a major ideological transformation.

The same observation applies to the 2011 revolution in Tunisia and, to a considerable extent, the 2003 overthrow of Saddam Hussein in Iraq.

26. The only notable regime change since 1979 that arguably involved an ideological shift was the dissolution of the Soviet Union in 1991. This transition was expected to usher in an ideological shift from communism to a market economy and democratic principles. Whether those ambitions were fully realized in Russia is not the focus here. What is relevant is that the degree of legal restructuring in post-Soviet Russia was limited compared to the changes imposed on the Iranian legal system after the 1979 revolution. Many elements of the Soviet legal infrastructure were preserved, with reforms largely operating within the pre-existing framework rather than replacing it outright.
27. The absence of an ideological shift in the legal systems of these other countries differentiates their experiences from those of Iran. Consequently, their transitional periods offer little practical insight for addressing Iran's unique situation. Reversing the ideological changes imposed on the Iranian legal system in 1979 requires an approach that is equally fundamental and substantive. To draw inspiration, we must look to jurisdictions that have undergone comparable ideological changes in their legal system.
28. The research conducted for this White Paper suggests that Britain's legal experience during the Brexit transition is the most analogous and thus the most relevant example for Iran.

B. Britain

29. Britain's departure from the European Union (voted for in 2016 and officially executed in 2020) resulted in significant changes to British laws—a process that still continues. Estimates suggest that more than 50,000 laws in Britain were EU-related. One might question the relevance of Brexit to this discussion, especially given that it did not even involve a regime change.
30. It should be noted that some of the most significant root factors behind Brexit were ideological (e.g., sovereignty and nationalism) or quasi-ideological (e.g., immigration and anti-establishment populism). These factors required changes to British laws that can be described as fundamental and substantive. Consequently, the transitional period designed by British lawmakers could be an important source of inspiration for us. Regardless of differing views on Brexit's political and economic outcomes, the way British lawmakers planned the transitional period was undeniably effective.

- 31.** When Brexit officially occurred in 2020, a transitional period of approximately one year was implemented to prevent legal chaos. During this period—
- 31.1.** the EU laws that applied to Britain on the Exit Day remained in effect as British domestic laws; but
 - 31.2.** specific EU laws that symbolized Britain’s membership in the EU (e.g., the European Communities Act 1972) were repealed immediately on day one.

This approach enabled British lawmakers to avoid a legal vacuum while allowing for a democratic process to determine which EU laws to retain or repeal in the following years.

- 32.** The British experience with Brexit and its transitional period is highly relevant and serves as a successful example that can inspire us. The Hybrid Option proposed earlier (see above, paragraph 22) takes inspiration from this approach.
- 33.** Britain and France represent two prominent legal traditions: Common Law and Civil Law, respectively. Unlike France, Britain did not abandon its political tradition of monarchy but, rather, evolved it into a parliamentary monarchy over time. This continuity has enabled British lawmakers, over centuries, to master the art of implementing significant legal changes with minimal social disruption. The design of the transitional period for Brexit exemplifies this mastery.
- 34.** The details of the proposed legal framework in this White Paper, which is based on the Hybrid Option and inspired by the Brexit transition period, are outlined in the next section.

IV. Proposed Legal Framework

- 35.** The National Uprising Council[5] will issue an Official Decree consisting of three parts:
- 35.1.** Part 1: Dissolving the Constitution of the Islamic Republic, along with all (or many of) its institutions. From a legal perspective, this act officially establishes the Transitional System and creates the necessary break from the old regime to gain international recognition and support.
 - 35.2.** Part 2: Announcing that, despite the dissolution of the Constitution, all existing laws—except those explicitly listed in Part 3 (or announced at later stages)[6]—will remain in effect during the transitional period to maintain stability in the nation’s affairs.

- 35.3. Part 3: Repealing a specified number of laws or provisions thereof. This signals the beginning of a new era for the nation and sets the stage for future modernization.
36. This approach ensures that societal functions continue uninterrupted, avoiding sudden disruptions or judicial paralysis. It also minimizes the National Uprising Council's workload, allowing it to focus on immediate priorities. Furthermore, it enables future elected representatives to deliberate and implement permanent legal reforms without provoking reactionary resistance from opposing factions.
37. A critical question arises regarding the formula the National Uprising Council should use to identify the laws to be repealed in Part 3. Given that this section serves the psychological element of boosting the nation's hope and confidence, the formula should be designed to create an immediate and emotional connection with the nation.
38. The most powerful source of inspiration for this formula is the slogan that has become a symbol of the Iranian modern revolution: Woman, Life, Freedom | Man, Homeland, Prosperity. This six-word slogan offers six core values for choosing which laws to repeal. Any law—or provision thereof—that clearly contradicts these six core values should be the top priority for repeal in the Official Decree.
39. Beyond providing a clear foundation, the slogan offers two additional benefits: first, it strongly resonates with the nation, inspiring hope and confidence; and second, its international recognition creates positive public relations for the Transitional System, enhancing its legitimacy on the global stage.
40. The following table illustrates how the six-word slogan can be applied to identify laws and legal provisions to be repealed.

Six Values	Woman	Life	Freedom	Man	Homeland	Prosperity
Examples of Laws and Legal Provisions Identified for Repeal	1. Laws and legal provisions imposing restrictive dress codes on women.	1. Laws and legal provisions imposing the death penalty and stoning.	1. Laws and legal provisions mandating internet filtering and censorship of the press, publications, and the film industry.	1. Laws and legal provisions imposing criminal penalties on men for failing to fulfill dowry obligations (Mahr) or paying alimony (Nafagheh).	1. Laws and legal provisions providing for the use of the Islamic Republic's official flag with the Allah symbol and its anthem.	1. Laws and legal provisions allocating funds to Islamic establishments, e.g., seminaries (Hozeh Elmiyeh), mosques, and imamzadeh mausoleums.
	2. Laws and legal provisions allowing gender discrimination in divorce, inheritance, child custody, and testimony/legal standing.	2. Laws and legal provisions imposing corporal punishments, e.g., amputation and flogging.	2. Laws and legal provisions discriminating against ethnic and religious minorities (e.g., restrictions on worship, property rights, and holding public office).	2. Laws and legal provisions allowing polygamy for men, including marrying up to four wives and having unlimited temporary marriages (Sigheh). ^[7]	2. The Islamic Republic's demands from international organizations to use "Islamic Republic" before "Iran" as the State name.	2. Laws and legal provisions deemed detrimental to stabilizing the national currency (to be determined by a panel of economists), e.g., currency controls and inflationary subsidies.
	3. Law and legal provisions requiring men's consent for women to work, pursue education, or obtain a passport.	3. Laws and legal provisions allowing harmful pollutants that affect air, water, and soil (to be determined by experts).	3. Law and legal provisions criminalizing same-sex relationships. ^[8]	3. Laws and legal provisions restricting men's attire, such as bans on sleeveless shirts and shorts in public.	3. Laws and legal provisions allowing construction projects near historical sites and protected natural environments.	3. Laws and legal provisions restricting foreign direct investment and the operation of foreign companies in Iran.
	4. Laws and legal provisions preventing women from holding public office or pursuing education in specific fields of study.	4. Laws and legal provisions prohibiting prenatal genetic screening of fetuses in pregnant women (checking for congenital conditions).	4. Laws and legal provisions banning the sale and consumption of alcohol, and those restricting the hospitality industry (e.g., the ban on bars and nightclubs).	[9]	4. Laws and legal provisions preventing the revival of significant natural resources, e.g., Urumiyeh Lake and Zayanderud River.	4. Laws and legal provisions imposing visa requirements (especially on tourists and business visitors) and restricting the tourism industry.

Conclusion

41. This White Paper outlined potential frameworks for managing daily legal affairs in Iran during the transitional period following the overthrow of the Islamic Republic. It evaluated three options and recommended the Hybrid Option as the most suitable framework.
42. The Hybrid Option combines retaining existing laws with repealing specific laws that either symbolize the Islamic Republic or hinder the success of the Transitional System.
43. Laws and legal provisions to be repealed should be selected based on the slogan that has symbolized the Iranian modern revolution: Woman, Life, Freedom | Man, Homeland, Prosperity. Laws and legal provisions that blatantly contradict these values should be prioritized for repeal.
44. This phased approach ensures the continuation of societal functions without judicial paralysis or public backlash. It allows the National Uprising Council to focus on immediate priorities while deferring the comprehensive modernization of the legal system to a future elected parliament.
45. Adopting this legal framework can pave the way for a successful and peaceful transition to a democratic future for Iran.

Endnotes

[1] The title “Transitional System” serves as an umbrella title encompassing three institutions that will govern Iran during the transitional period, under the leadership of Crown Prince Reza Pahlavi. The three institutions are as follows: the *National Uprising Council* (serving as the transitional legislative branch), the *Transitional Government* (serving as the transitional executive branch), and the *Transitional Divan* (serving as the transitional judiciary). For more information, see D.L.B., *IPP White Paper - Political Process and Framework for Transition from the Islamic Republic*, 4th ed (July 22, 2025).

[2] This White Paper does not address the following topics, each warranting a separate, detailed analysis: (i) sources of legitimacy of the Transitional System; (ii) the dissolution of Islamic Republic institutions and their potential replacements during the transitional period; (iii) international legal obligations inherited by the Transitional System from the Islamic Republic; and (iv) structural reforms to the Iranian legal system, including the sources of law and the responsibilities of legal institutions, such as the parliament and courts.

[3] Decisions as to which Islamic Republic institutions (e.g., the Islamic Revolutionary Guard Corps) should be dissolved during the transitional period fall outside the scope of this White Paper.

[4] The term “legal system” covers both “legal sources” and “legal institutions” (such as parliament and courts).

[5] For information on the responsibilities of the National Uprising Council, see D.L.B., *IPP White Paper - Political Process and Framework for Transition from the Islamic Republic*, 4th ed (July 22, 2025).

[6] In the Official Decree, the National Uprising Council should vest itself with the authority to add to the list of repealed laws as necessary during the transitional period. This flexibility is essential to address unforeseen challenges that may arise as the Transitional System progresses in its work.

[7] This repeal is essential not only for promoting gender equity in Iran but also for enhancing the dignity and global perception of Iranian men.

[8] The term “relationship” is deliberately used here instead of “marriage” in order to reduce potential controversy and backlash from conservative parts of society. During the transitional period, it is best for the Transitional System to focus on decriminalizing these relationships without addressing larger issues like marriage, inheritance, or adoption rights for same-sex couples. These topics are better suited for discussion by the elected parliament in future and in due course.

[9] Laws providing for compulsory military service for men fit into the table. However, they are not listed here because repealing them would deprive the Transitional System of access to new soldiers, which might not be advisable as a defense policy during the transitional period. The issue of balancing national defense needs with gender equity can be discussed later once a new parliament is elected.

5. Maintaining Essential Functions

The transitional government aims to stabilize the nation by ensuring the continuity of essential functions. This plan outlines strategies for the first six months to maintain societal stability, focusing on both the public and private sectors.

Objectives:

- Ensure uninterrupted delivery of essential services.
- Stabilize the economy by supporting key industries.
- Maintain law and order to prevent societal unrest.

Key Priorities:

- Food Security: Guarantee access to essential food supplies.

- Supply Chain Management: Ensure continuous operation of supply chains for essential goods.
- Infrastructure Stability: Keep transportation and utilities operational.
- Public Health: Maintain healthcare services to manage health crises.
- Economic Stability: Maintain production and economic participation levels.
- Public Services: Maintain essential government services like law enforcement and emergency services.

Assumptions:

- Regional and international cooperation and aid will be available.
- Key stakeholders will cooperate with the transitional government.
- Basic infrastructure remains intact post-regime fall.
- Key and essential industry workers will largely continue to work

Actions:

Food Supply:

- Collaborate with the private sector to ensure operational continuity
- Facilitate import of key inputs of production in the food supply chain, e.g., animal feed
- Partner with local and international suppliers to secure food imports in case of food shortages, e.g., cooperation with WFP.
- Implement rationing systems if necessary to ensure equitable distribution.

Transportation and logistics Infrastructure:

- Conduct immediate assessments of roads, rail, and airports and identify key routes and infrastructure for repair and maintenance prioritisation e.g., in case of major destruction
- Collaborate with private transport and logistics companies to ensure operational continuity.

Utilities (For more details please see Energy section of the plan):

- Assess potential for shortages and develop contingency plans
- Identify essential industries and locations, e.g., hospitals, for prioritisation of utility supplies especially electricity, in case of shortages
- Collaborate with utility providers to ensure continuous supply.
- Implement contingency plans for potential disruptions.
- Identify and halt energy consumption of certain operations set up by the Islamic Republic and IRGC privately, e.g., Bitcoin mining, that contribute to energy shortages and do not benefit the public
- Promote energy conservation measures among the population, e.g., by leveraging behavioral economic nudges

Health Services (For more details please see Health section of the plan):

- Collaborate with international health entities, e.g., WHO, to mobilise emergency medical supplies if needed
- Collaborate with the private sector to ensure operational continuity
- Facilitate import of medicine and medical supplies, including equipment
- Implement rationing systems if necessary for non-essential medication
- Conduct an assessment of existing and potential medical shortages for contingency planning and imports

Public Services:

- Deploy security forces to safeguard public facilities.
- Maintain communication lines with local institutions to ensure service delivery.
- Establish a rapid response team to address public grievances and emergencies.
- Assess potential for strikes by Islamic Republic loyalists within public services, especially government entities, and develop contingency plans to address potential slow-down of public services

Institutional Knowledge:

- Digitize key government documents and knowledge bases.
- Establish a knowledge management system for efficient information sharing.
- Retain and leverage key personnel with long-term experience within governmental institutions, to train new personnel and instill institutional knowledge, e.g., through workshops, training programs, etc.

Recommendations:

- Develop strategic partnerships with international organizations for technical and financial assistance.
- Collaborate with Civil Society, NGOs, and the private sector to ensure operational continuity
- Enhance communication strategies to keep the public informed and engaged.
- Strengthen local governance structures to ensure effective implementation.

Expected Outcomes:

- Sustained access to food, transportation, public services, and utilities.
- Reduced societal disruptions and increased public trust in transitional governance.
- Preservation of institutional knowledge and expertise.

Monitoring and Evaluation:

- Establish an oversight committee to track maintenance of essential functions.
- Use indicators such as supply chain disruptions, change in food shortages,, and public satisfaction levels, to monitor progress towards or deviation from desired outcomes.
- Conduct regular evaluations to assess progress and adjust strategies as needed.

Anticipated Political Challenges:

- Resistance from factions opposing the transitional government.
- Potential lack of cooperation from existing bureaucracies.
- Political instability affecting resource allocation and decision-making processes.

Mitigation measures for political challenges:

- Inclusive dialogue, power-sharing, amnesty, transparent communication, influencers
- Retention incentives, clear mandates, training, whistleblower protection, gradual transitions
- Interim legal frameworks, independent oversight, public reporting, rapid response teams, conflict resolution

6. Education

Overview: This policy paper proposes a phased educational reform plan for Iran in the aftermath of the Islamic Republic. Drawing on post-totalitarian experiences like post-Nazi Germany and post-imperial Japan, the plan is rooted in secularism, democracy, and national integration. It aims to dismantle the ideological legacy of the Islamic Republic, and to build a modern, inclusive, and globally connected education system, which will promote critical thinking, gender equality, and individual flourishing.

Reforms are structured in three phases: emergency de-ideologisation and stabilisation (Phase 1); systemic curricular and institutional reform (Phase 2); and long-term consolidation through excellence and internationalisation (Phase 3). Each phase is described in this paper, along with specific goals, implementation strategies, and obstacles—including infrastructural challenges, teacher resistance, and cultural inertia – and recommended policy responses.

1. Introduction: Education as Political Reconstruction

Decades of authoritarianism under the Islamic Republic will leave behind a fractured society – scarred by psychological trauma and crippled institutions. Nowhere is the imprint of this legacy more pronounced than in the education system. Designed to reinforce theocratic authority and suppress dissent, Iranian schools under the Islamic Republic became instruments of religious conformity, gender segregation, and intellectual restriction. Rather than fostering critical thinking or civic engagement, education was subordinated to the goals of political control and the export of a transnational Islamist revolutionary project. This legacy stands in stark contrast to secular democratic systems, where education serves as a foundation for pluralism, inquiry, and public reason.

Years of isolationism further drained Iran's human capital and severed ties with global intellectual and economic networks. As the country seeks revival and reintegration, education must become the foundation for civic renewal and a modern knowledge economy. Initiatives like HIH Reza Pahlavi's Cyrus Accords, which envision Iran as a regional leader in diplomacy and ecological innovation, highlight the need for a new generation trained in science, law, governance, and the humanities.

Rebuilding Iran's civic and intellectual life must therefore begin with a fundamental transformation of the education system. This transformation requires a comprehensive overhaul of institutions, curricula, pedagogy, personnel and infrastructure. Reform must also invest in diverse domains – science, literature, music, business, art, and sport – while establishing elite public service schools aligned with international standards.

Above all, it must affirm education as a fundamental human right. This paper proceeds from the premise that educational reform is foundational to national recovery, and is guided by four core objectives:

1. Dismantling the intellectual, cultural, and psychological legacy of the totalitarian Islamist regime
2. Creating a secular, democratic intellectual culture
3. Developing the general intellectual capacities necessary for Iran's successful participation in the 21st-century global society and economy
4. Building the specialised competencies necessary to advance Iran's strategic goals in science, diplomacy, ecology, and sustainable development.

2. Background: The Ideological, Institutional, and Infrastructural Crises of Education Under the Islamic Republic

Today, Iran's education system suffers from crises in three main areas: ideology, governance, and infrastructure, each reinforcing the other. These are further compounded by a set of cross-cutting systemic failures that have widened inequality, entrenched inefficiency, and deepened the system's irrelevance to national and global realities. Any meaningful reform must begin with an honest reckoning with this legacy.

2.1. The Legacy of Ideological Education

From its inception, the Islamic Republic designed the education system to reshape social and political consciousness, and so to produce citizens loyal to the ideas of Islamic revolution. In accordance with other aspects of state organisation, the regime ran the education system as a centralised monopoly, ensuring consistency with state ideology through tight controls over curricula and teacher recruitment. Key aspects of the system are as follows:

- **Islamisation of Intellectual Life and Suppression of Critical Disciplines:** Humanities and social sciences were either eliminated or replaced with Islamicised versions, for example, disciplines such as philosophy, history, political science, and sociology were purged or replaced by Islamicised variants. Academic freedom was systematically eliminated, with teachers and students closely monitored by Basij and clerical networks. This included the comprehensive revision of textbooks to align with Islamic principles and the values of the revolution.
- **Religious Indoctrination:** Textbooks and curricula were heavily centred on Islamic jurisprudence, martyrdom, jihad, and obedience to velayat-e faqih. This content framed the student not as an autonomous citizen but as a subject of divine authority.

- **Ideological Monopolisation:** Social studies, literature, and even science were imbued with revolutionary slogans and conspiratorial anti-Western themes. The aim was to close off the possibility of alternative political or epistemological frameworks.
- **“Ummah-isation”:** Iranian national identity was subordinated to a vision of Islamic supranationalism, aimed at dissolving Iranian culture and history in favour of a transnational religious-political mission, encouraging students to view themselves as part of the “Ummah” (transnational community of Muslims), with a duty to defend, and expand the Islamic revolution.
- **Gender Segregation:** This was to reinforce traditional roles for men and women in line with Islamist ideology. Segregation is both physical and intellectual. Schools were physically segregated by gender, and curricular content reinforced patriarchal roles.

These practices created an intellectually stunted society with limited capacity for global engagement, scientific innovation, or democratic deliberation. Undoing this legacy demands a careful, phased approach rooted in historical lessons and responsive to present challenges.

2.2. Crisis of Governance and Institutional Inflexibility

Parallel to its ideological rigidities, the education system in Iran suffers from profound governance failures. The administrative structure is bloated, inefficient, and highly resistant to reform. Key aspects of this institutional dysfunction include:

- **Redundant Structures:** A proliferation of ministries, sub-agencies, and parallel authorities has resulted in thousands of redundant positions and significant public spending with minimal return.
- **Overlapping Mandates:** Conflicting organisational responsibilities have led to duplicated efforts, unclear accountability, and inefficiency in service delivery.
- **Inequitable Staffing:** Human resources are disproportionately concentrated in urban centres, leaving rural and peripheral areas critically underserved.
- **Lack Of Professionalism And Experience:** A culture of routine and complacency dominates many educational institutions. Promotions and appointments are frequently based on ideological loyalty rather than merit or competence.

This managerial crisis obstructs even modest reform efforts and contributes to widespread mistrust of the education system.

2.3. Infrastructural Crisis

The physical infrastructure of Iran's education system is in a state of visible collapse. Years of neglect, budgetary mismanagement, and regional disparity have created unsafe and unequal learning environments. The key problems include:

- **Acute Facility Shortages:** There is a severe lack of educational space, particularly in high-density urban areas and remote, underserved provinces.
- **Unsafe School Buildings:** Approximately 30% of Iran's schools are structurally compromised or at risk of collapse, posing a direct threat to students and staff.
- **Makeshift Schooling Conditions:** Thousands of schools across the country operate in buildings made of mud, straw, metal containers, or other substandard materials.
- **Deficient Equipment:** Laboratories, workshops, and vocational schools suffer from chronic shortages in basic equipment, severely limiting hands-on learning and skills development.
- **Funding Shortfalls:** Public investment in education is inadequate, and efforts to attract community-based or philanthropic support have largely failed due to mistrust and centralised control.

2.4. Additional Systemic Failures

In addition to the three core crises of ideology, governance, and infrastructure, Iran's education system suffers from a number of cross-cutting systemic failures that undermine equity, quality, continuity, and relevance. These failures deepen existing disparities and reflect the broader decay of state capacity and vision.

- **Crisis of Free and Paid Education:** The constitutional promise of free education has eroded under the Islamic Republic. Most public schools now operate as de facto fee-paying institutions under various guises – such as Board of Trustees schools, Shahed schools (for families of regime loyalists), model public schools, and schools for the academically gifted. This shift has widened inequalities, particularly for students from low-income families who are increasingly excluded from quality education. At the same time, private school founders – once expected to innovate and relieve pressure on the public sector – have been stripped of meaningful autonomy. The system's incoherence is further exacerbated by the proliferation of over twenty different school types, resulting in fragmentation, inefficiency, and a breakdown in universal standards.
- **Crisis Of Dropouts And Out-Of-School Children:** Every year, a large number of Iranian children drop out or never enter the school system. According to a 2019 estimate by the country's Parliament Research

Centre, more than 2.5 million children are currently out of school. This crisis is driven by a combination of economic hardship, long distances to educational facilities, lack of transportation infrastructure, and the absence of a compelling educational or professional future. The government has consistently failed to target vulnerable groups, exacerbating cycles of poverty and exclusion.

- **Crisis of Isolation and Irrelevance:** The Islamic Republic's education system is not only ideologically insular but also functionally disconnected from the country's broader social and economic needs. There is little integration between schools and sectors such as industry, agriculture, or environmental policy, and curricula remain abstract and detached from real-world applications. Students emerge with knowledge that has limited value in the job market or public life. Compounding this inwardness is Iran's international isolation: language instruction is weak, global academic standards are disregarded, and students are poorly prepared to compete in global arenas. As a result, Iranian education fails not only in principle but also in performance.

3. Dismantling the Intellectual and Cultural Legacy of the Islamic Republic

The new education system must first dismantle the ideological architecture of the past and foster the conditions for a secular and democratic society. While removing the state monopoly on education may be explored, all schools must be licensed to teach a new, unified national curriculum. The objectives of the new curriculum are as follows:

- **Removing Islamic Republic Influence:** The overwhelming Islamist influence must be removed from the curriculum and from all textbooks, as must the emphasis on martyrdom, jihad, and militarism.
- **Addressing The Crimes Of The Islamic Republic:** The curriculum must provide schoolchildren with a clear understanding of what has taken place in Iran over the last five decades.
- **Overcoming Islamist Ideas of Gender:** Schoolchildren will be taught the theory of gender equality from a young age. Classrooms, and school activities will be desegregated, which will also involve the physical reconstruction of school facilities.
- **Promoting Iranian Democracy:** Schoolchildren must learn about the history of the Constitutional Revolution and the struggle for democracy in Iran, along with Iranian and European political theory, and the nature of the democratic rights and responsibilities carried by all citizens in the new Iran. They must receive a comprehensive civic education, including such crucial areas as human rights, environmental stewardship, and gender equality.

- **Reestablishment of Iranian National Identity:** As a response to the Islamic Republic's "Ummah-isation", it will be crucial to instruct students in the history and culture of their country. Literature, history, philosophy, and the arts will occupy a prominent place in the curriculum.
- **Creating an Open Intellectual Culture:** Critical thinking will be essential. Students must learn to analyse ideas, to construct logical arguments, to debate with others with tolerance, and to respect the diversity of opinions. They will study the history of a wide range of religions and philosophical schools, be exposed to histories and cultures from all areas of the globe, and be encouraged to learn foreign languages.

4. Lessons from Post-Totalitarian Transitions: Germany and Japan

Nearly ninety percent of Iranians alive today received their education under this system. The legacy is therefore deep. Dismantling it will require not only the complete reconstruction of Iran's intellectual and cultural life, but also the promotion of a post-totalitarian political psyche.

Comparative historical experiences offer valuable guidance. The "de-Nazification" of Germany after 1945 and the democratic reforms in post-war Japan demonstrate how deeply authoritarian societies can be transformed into open, liberal democracies. In both countries, education reform was central to broader societal reconstruction. While the United States played a decisive role in imposing many of these reforms, they were also eventually embraced by domestic actors, who recognised the disastrous legacy of fascism and militarism. In contrast, countries in the Soviet Bloc that failed to pursue such deep cultural reform remained far more authoritarian for decades.

In post-Nazi Germany, several key strategies shaped educational transformation:

- **Removing Ideological Influence:** Nazi textbooks were banned, and teachers associated with Nazi ideology were dismissed. Racist, militarist, and anti-democratic content was purged from curricula.
- **Confronting Historical Crimes:** Holocaust education became a central component of history instruction. Museums and memorials were created to cultivate historical memory and moral reflection.
- **Teaching Democracy:** Civic education was introduced, focusing on political theory, democratic institutions, and citizenship responsibilities.
- **Creating an Anti-Totalitarian Intellectual Culture:** Education emphasised student participation, free discussion, and respect for differing views. This was mirrored in the wider society, which saw a new diversity of media and culture. The Kongresshalle ("Congress Hall") opened in Berlin in 1957; a gift

from the USA, the hall was – and remains to this day – a major centre of liberal culture, hosting conferences, debates, concerts, and other intellectual and cultural activities.

Japan's post-war experience, though shaped by different historical and cultural conditions, offers additional insights. The education system underwent a major shift from nationalist indoctrination to democratic reorientation.

Key reforms included:

- **Decentralisation of School Governance:** Local authorities were given more control over educational content and administration, reducing the reach of centralised ideological control.
- **Textbook Revision and Curriculum Liberalisation:** Wartime propaganda was eliminated and replaced with content encouraging critical thinking, international cooperation, and civic responsibility.
- **Institution-Building for Intellectual Renewal:** The International House of Japan, founded in 1955, became a major centre for cultural dialogue and academic exchange, fostering post-war liberal intellectual life across disciplines.

These cases demonstrate that educational reform is not only about content and dismantling authoritarian legacies, but also about rebuilding civic trust and reshaping the national imagination. Post-regime Iran can learn from these experiences to establish an education system that does not simply reject the past but actively builds the foundations of a more open, informed, and democratic future.

5. Phased Strategy for Educational Reform

Reforming Iran's education system will require a phased, multi-year strategy, corresponding to the changing institutional, legal, and societal contexts of the post-Islamic Republic transition. This policy paper outlines reforms over three broad phases: Phase 1 (months 0–6) focuses on emergency de-ideologisation and institutional stabilisation. Phase 2 (months 7–24) initiates systemic curricular and structural reform. Phase 3 (month 24 onward) targets long-term consolidation through academic excellence and international integration.

5.1. Phase 1: Emergency Phase

In the first six months following the fall of the Islamic Republic, the immediate priority is to stabilise the education system while initiating urgent reforms that both ensure continuity and signal a decisive break from the past. This phase must balance administrative pragmatism with clear political and symbolic action. The goal is twofold: to maintain school operations without disruption, and to begin dismantling the ideological foundations of the former regime's educational apparatus.

5.1.1. Immediate priorities

- Eliminate the policy of gender segregation in schools and make the wearing of the hijab optional for both students and teachers, and eliminate strict Islamic dress codes.
- Remove selected textbooks and subjects associated with ideological indoctrination; revise extracurricular and cultural programming to strip out content linked to the Islamic Republic's ideological agenda.
- Remove all symbols of the Islamic Republic from school and educational institution premises.
- Preserve the existing administrative and employment structure to avoid chaos, while ensuring that schools remain open and teachers continue to receive their salaries without interruption.
- Provide essential support services, including free transportation in rural areas and distribution of meals in underserved provinces, to promote equitable access and retain vulnerable students.
- Start introducing comprehensive sex education, crucial to addressing issues like early marriage, reproductive health, and sexual consent.
- Teacher and staff training for integrated classrooms to support inclusive and integrated learning environments.
- Depoliticising and de-ideologising the teaching profession, and establishing new hiring standards based on qualifications rather than political affiliations.

5.1.2. Structural And Legal Interventions

To support these priorities, the following legal, administrative, and symbolic measures should be implemented rapidly:

- **Legal Overhaul:** Repeal all existing laws and regulations that mandate religious indoctrination, gender segregation, gender discrimination, discrimination based on sexual orientation, or the inclusion of ideological content in the curriculum.
- **Curriculum Freeze and Audit:** Immediately suspend the most extreme ideological materials. Establish an independent task force of educators, academics, historians, and psychologists to conduct a comprehensive review of all educational content.

- **Personnel Reassessment:** Identify and temporarily suspend educators and administrators complicit in ideological enforcement or abuse. Offer early retirement packages with clear due process protections to facilitate institutional turnover without disorder.
- **Symbolic Rupture:** Rename institutions, revise public signage, and remove Islamic Republic symbols, slogans, and portraits from school premises to clearly mark the transition.

5.1.3. Anticipated challenges

Several risks may complicate this transition:

- A bloated and ideologically entrenched bureaucracy – accounting for nearly 30% of public-sector employees – some of whom may resist reform.
- Teachers and administrators may oppose measures such as mixed-gender education or fear loss of status under new policies.
- Families in poverty may depend on child labour, making it difficult to reintegrate children into formal education.
- Former regime affiliates may attempt to continue ideological education through private schools under a legal façade.

Mitigating these challenges requires early and transparent communication, community engagement, and social protection measures. This phase must lay the foundation for deeper systemic reform in Phases 2 and 3, while restoring public trust and demonstrating the values of a new, inclusive educational order.

Reforms – Phase 1	
Reforms	Tasks and obstacles
Phase One of curriculum reform	Immediate removal of ideological indoctrination Immediate removal of state-imposed religious teachings Rename institutions, revise public signage, and remove Islamic Republic symbols from school premises
Gender integration	Infrastructure: school buildings and classroom setup Teacher and staff readjustment Social and cultural; resistance from conservative families and communities Adjusting gender norms in student behaviour; removing Islamic dress code Preventing harassment and ensuring safe school environments
Immediate teachers assessments and training	Ideological resistance from conservative teachers Resistance from teachers who fear job loss Administrative resistance from school bureaucracy
Adjusting for students	Psychological and social readjustment Curriculum stability
Phase one of curriculum reform	Immediate removal of ideological indoctrination Immediate removal of state-imposed religious

Smooth functioning of schools	Ensuring the continuation of schools and the salary system for teachers
--------------------------------------	---

The transition from a gender-segregated education system to mixed-gender schools in Iran must also begin during this initial reform phase. This initiative, however, presents both infrastructural and social challenges. With separate institutions for boys and girls operating for over four decades, there is no existing model or space designed for coeducation. A phased approach is essential: designated pilot schools should begin implementing mixed-gender learning while renovations are undertaken to ensure adequate and inclusive facilities—such as restrooms and locker rooms—are available to all students. Flexible classroom layouts, combined with optional segregated spaces, can help accommodate a range of comfort levels during this transition.

Adjusting the teaching workforce will be critical. Many teachers, having worked exclusively in gender-segregated environments, may find the shift to mixed-gender education challenging. Retraining programs, with a focus on gender sensitivity and inclusive pedagogy, will be essential. A balanced redistribution of male and female teachers is also necessary, along with incentives such as bonuses and promotions to encourage early adoption.

Resistance from conservative communities will be significant. Some parents may refuse to send their daughters to mixed schools due to moral or religious concerns. To counter this, a gradual implementation strategy is vital. Community engagement programmes, including public awareness campaigns and the use of religious and cultural narratives in favour of coeducation, must be launched to reassure families. Highlighting examples from Islamic history and modern Muslim-majority countries can build confidence. Simultaneously, mechanisms for preventing harassment—such as clear reporting policies, counselling services, and staff training—must be embedded in all schools.

Students will also require support. Having been raised in strict gender-segregated environments, many may lack the social skills necessary for healthy mixed-gender interactions. Mentorship programmes, orientation sessions, and structured classroom participation strategies can ease this transition. Encouraging older students to mentor younger ones can help normalise new behavioural norms.

The transition must also be regionally sensitive. While some areas may accept coeducation more readily, the conservative regions may resist. A regionally phased rollout, accompanied by targeted support—such as scholarships for girls and infrastructure funding for rural schools—will help mitigate disparities.

Beyond gender integration, addressing ideological resistance among educators is essential. Some teachers, especially those trained under or affiliated with the regime, may resist reforms or fear job loss. Immediate assessments must be conducted to determine which individuals can adapt, which require retraining, and which should be removed. Clear guarantees must be given to teachers who were simply following mandated curricula, while those who actively propagated extremist ideology should face accountability. Retraining, job security guarantees, and early retirement options should be part of a humane and practical transition.

Students, too, will need psychological and academic support. Some high school students steeped in ideological narratives may find secular education disorienting. Younger children may feel anxiety amid adult disagreements. Schools should offer structured discussion spaces, counselling, and a gradual curriculum shift - retaining core academic subjects while developing new content in history, literature, and ethics.

To coordinate these reforms, an Interim National Education Task Force should be established immediately. Composed of respected educators and civil society figures, it should oversee personnel reform, launch fast-track teacher training, and ensure that no school is forced to close due to staffing or curricular gaps. The system must remain functional and coherent during this delicate phase.

Ultimately, this phase is not just about removing indoctrination but laying the foundation for a civic, inclusive, and student-centred education. Once consensus emerges around these aims, Iran can begin developing a blueprint for a new education system – learning from successful global models and tailored to the country's unique context.

5.2. Phase Two: Transitional Reconstruction (7–24 months)

The second phase marks a shift from emergency intervention to systemic rebuilding. It is during this period that Iran must begin to design and pilot the structural and intellectual foundations of its new educational system. The key challenge of this phase is balancing continuity with innovation – retaining the functionality of the education system while reimagining its ethos, structure, and goals.

5.2.1. *Top priorities in the first two years after the Islamic Republic*

- Eliminate redundant and ineffective organisations and departments such as the Literacy Movement, Non-Profit Schools Organisation, and the Cultural Affairs Department, and reassign their staff to schools.
- Construct and equip boarding school complexes in rural areas to reduce dropout rates and provide quality educational services.

- Develop the necessary strategies to reduce school dropouts and bring out-of-school children back into the education system.
- Eliminate the numerous and diverse types of state-run but fee-based schools, which currently exceed 20 different categories.
- Organise and optimise the use of human resources by facilitating the entry of graduates from public and private universities into the school system through required training programs.
- Strengthen institutions such as the Institute for the Intellectual Development of Children and Young Adults to provide meaningful extracurricular engagement for students.
- Curricular reform in key disciplines, including redesigning and depoliticising the teaching of history, social sciences, humanities, art, and literature; integrating regional, inclusive, and non-ideological narratives, and revising textbooks to reflect scholarly accuracy, pluralism, and critical inquiry.
- Undertaking a comprehensive overhaul of humanities and social science curricula, and reintroducing sociology, anthropology, history, philosophy, and political science in secular, evidence-based frameworks.
- Eliminating gender segregation across all levels of schooling, both physically and in curriculum design, and ensuring equal access to subjects, especially science, technology, engineering, and mathematics, and civic education, for all genders.

5.2.2. Key Challenges And Obstacles:

- Teacher shortages and retraining fatigue: Many teachers removed or reassigned in the immediate phase will need to be replaced or retrained. Fatigue, resistance, and lack of training infrastructure may hamper these efforts.
- Urban–rural disparities in implementation: Urban schools may advance rapidly, while rural or under-resourced areas lag behind due to infrastructural and human resource deficits.
- Student trauma and disengagement: Students may continue to struggle with unprocessed trauma and educational instability.
- Institutional distrust: After decades of ideological manipulation, public trust in educational authorities may remain low.

5.2.3. Proposed solutions:

National teacher retraining programme:

- Establish regional teacher colleges and summer institutes focused on inclusive pedagogy, civic education, and post-authoritarian ethics.
- Recruit newly graduated university students into accelerated teaching fellowships.
- Engage the diaspora by inviting exiled educators and academics to contribute through temporary in-country appointments or virtual platforms.

Interim Curriculum Development:

- Introduce a provisional, centrally coordinated curriculum with core subjects: civic education, constitutional studies, Iranian cultural heritage and history, comparative religion, science, and global history.
- Partner with trusted international educational NGOs and academic institutions for technical support and comparative models.

Model Schools And Pedagogical Innovation:

- Designate a network of “model schools” across provinces to trial new teaching methods, participatory governance structures, and community engagement strategies.
- Promote experimentation in school councils, parent associations, and student-led activities to foster democratic practice at the school level.

Student Support And Psychosocial Services:

- Deploy trained counselors to schools with high trauma exposure.
- Integrate trauma-informed practices into pedagogy, especially for secondary school students.

Public Engagement And Accountability Mechanisms:

- Establish local education advisory councils composed of parents, students, teachers, and civil society members.
- Promote transparency in decision-making and allocate resources equitably across regions.

5.3. Phase Three: Long-Term Transformation (Beyond 2 years)

The final phase involves the institutionalisation of reform. The goal is to anchor Iran's education system in values of pluralism, secular democracy, excellence, and global relevance and competitiveness while addressing long-standing inequalities and structural deficits.

5.3.1. Top priorities

- Provide universal, free, and high-quality public education for all citizens
- Permit private sector participation in education
- Streamline the administrative sector and reinforce the central role of schools
- Expand the scope of educational content to include local and optional non-Persian languages and dialects
- Reform the centralised, lifelong (30-year) state employment model for new teachers - one possible solution is to replace it with continuous, decentralised performance evaluations carried out by schools and local education departments.

5.3.2. Key Challenges and Obstacles

- Curriculum standardisation and political pressures: The long-term curriculum must balance competing visions of Iranian identity while avoiding ideological relapse or politicisation.
- Infrastructure inequality: Rural schools, especially those in remote regions, may continue to suffer from poor infrastructure and limited access to qualified teachers.
- Brain drain and academic isolation: Iran may continue to lose talented faculty to emigration or suffer from outdated governance structures.
- Financial constraints: The post-regime state may face fiscal limitations that delay investment in infrastructure, technology, and salaries.

5.3.3. Proposed solutions

1. Finalising A National Curriculum And Philosophy Of Education:

- Convene a National Education Assembly, composed of scholars, educators, and academics, to draft a guiding philosophy for education.

- Establish independent curriculum development bodies insulated from political interference.
- Emphasise secularism, pluralism, critical inquiry, human rights, ethics, and the integration of Iran's diverse intellectual and cultural traditions.

2. Massive Infrastructure Investment:

- Launch a "National School Rebuilding Plan," prioritising rural, remote, and underserved urban areas.
- Expand access to digital infrastructure, including tablets, solar-powered classrooms, and online learning platforms.
- Encourage local construction initiatives with youth involvement to foster a sense of ownership and community revival.

3. Global Partnerships And Academic Reconnection:

- Rejoin international educational bodies and academic networks.
- Encourage school partnerships, student exchanges, and faculty mobility through government-sponsored fellowships.
- Translate key global academic texts into Persian and invest in public-access digital libraries.

4. Higher Education Reform:

- Restore institutional autonomy and academic freedom in universities.
- Diversify governance structures with student and faculty representation.
- Prioritise education in fields critical to Iran's future—climate adaptation, renewable energy, agriculture, industry, international law, digital technologies, and public health.

5. Educational Equity And Inclusion:

- Provide scholarships for students from disadvantaged backgrounds, special training tracks, and mentoring programmes to cultivate leadership from all segments of society.

6. Conclusion

- Education lies at the heart of Iran's future. Reclaiming the classroom from the ruins of ideological domination is not merely a technical or administrative task – it is a civilizational project. The fall of the Islamic Republic creates a historic opportunity to reimagine education as a force for liberation, renewal, and collective dignity. Through sustained reform, Iran can develop an education system that honours its ancient intellectual heritage while preparing future generations to lead in the twenty-first century.
- This policy paper offers a roadmap for that transformation. It is a call to educators, policymakers, students, and citizens to take part in shaping a system that will not only reflect the democratic aspirations of the Iranian people but also serve as a model for post-authoritarian reconstruction around the world

7. Foreign Policy

Introduction: A Transitional Foreign Policy Framework for Iran

This document outlines the foreign policy roadmap of Iran's Interim Government during the transitional period following the end of the Islamic Republic. Built on principles of realism, national interest, and non-ideological diplomacy, this framework aims to address the country's immediate security and foreign policy needs, secure international legitimacy, and prepare the ground for long-term regional stability and economic recovery.

The transition period marks a historic opportunity to redefine Iran's role in the world. The ideological, confrontational, and destabilizing foreign policy of the Islamic Republic will give way to a responsible diplomacy rooted in cooperation, transparency, and national development.

This document presents both the foundational principles of Iran's future foreign policy and a concrete, time-bound action plan for the first 100 days of the transition. It includes immediate steps to normalize relations with key global powers, reestablish credibility with international institutions, and launch regional cooperation initiatives. It also proposes institutional reforms within the Ministry of Foreign Affairs and introduces a dedicated Economic Diplomacy Task Force to attract foreign investment.

Iran's Foreign Policy Outlook After Transition

Fundamental Objective

The Interim Government of Iran views the complete overhaul of the country's foreign policy as a vital prerequisite for national reconstruction, reintegration into the international community, and the establishment of a stable regional order. This transformation will pursue the following key goals:

- Rapid attainment of international legitimacy and formal recognition by major global powers, including the United States, the European Union, Israel, neighboring countries, India, China, and Russia
- Addressing global concerns regarding Iran's nuclear and missile programs, as well as its past destabilizing regional behavior
- Ending Iran's international isolation and freeing the economy from the burden of sanctions
- Replacing the Islamic Republic's ideological foreign policy with a pragmatic, nationally-driven, and peace-oriented approach.

1. Core Principles of Future Iranian Foreign Policy

A. **Non-Interventionist Regional Strategy**

Iran will adopt a foreign policy that emphasizes respect for national sovereignty and territorial integrity. Unlike the previous regime, which exported ideology and fomented instability, the interim government is committed to internal rebuilding and peaceful coexistence.

B. **Full Transparency in the Nuclear Arena**

One of the government's first actions will be to fully re-engage with the IAEA, inviting unfettered inspections to demonstrate the civilian nature of Iran's nuclear program— paving the way for sanction relief.

C. **Recognition and Normalization with Israel**

The interim government will officially recognize the State of Israel and initiate normalization efforts without preconditions, marking a historic shift away from ideological hostility.

D. **Strategic Reconstruction of U.S.–Iran Relations**

Iran seeks a respectful, mutually beneficial partnership with the United States, grounded in shared interests across security, trade, and non-aggression.

E. **Balanced and Respectful Relations with China & Russia**

Iran acknowledges the global significance of China and Russia and will synergize its partnerships with them based on mutual respect, transparency, and Iran's sovereign interests— without turning into a subordinate client state.

F. **Pragmatic, Transparent, National-Interest-Driven Policy**

Future foreign policy will be driven by realism, accountability, and Iran's national interest— not by ideology, slogans, or antagonism.

2. Strategic Foreign Policy Goals During the Transition

A. **Peace Through Strength (Military & Economic)**

Iran will build credible deterrence to secure peace and respect in the region—not to wage war, but to prevent future coercion.

B. **Strategic U.S. Partnership for Regional Stability**

Serving as a force multiplier, Iran can lessen the U.S. security burden by contributing to counterterrorism, regional resilience, and economic development.

C. **Strategic Relationships with Israel & Saudi Arabia**

Deepening ties with these two regional powers will support maritime security, counter proxy actors, enable tech exchange, and advance regional cohesion. Normalization with Israel symbolizes a break from past hostility.

D. **Multilateral Regional Cooperation Frameworks**

Iran aims to lead initiatives across the Persian Gulf, Levant, and Central Asia—covering maritime security, reconstruction, anti-radicalism, trade, and connectivity.

E. **End of Ideological, Revolutionary Foreign Policy**

The era of exporting revolution and fueling regional unrest is to be replaced by pragmatic, neighborly engagement.

F. **Targeted De-escalation**

Wherever possible, Iran will lower tensions through diplomacy, confidence-building, and crisis prevention mechanisms.

3. **First 100 Days: Action Plan Summary**

Timeline	Key Actions
Week 1	Dispatch official letters to world powers announcing regime change and requesting recognition
	Recognize Israel
	Commit to full IAEA cooperation
	Request immediate sanctions suspension
Month 1	Enter formal talks with the U.S., EU, Israel, China, Russia, and neighbors

	Open diplomatic channels
	Host regional cooperation conference
	Accept IAEA inspections
Months 2–3	Draft MOUs on trade, non-aggression, and security cooperation
	Appoint interim envoys to global institutions
	Launch regional security/economic initiative
End of Month 3	Officially begin the sanctions relief process
	Sign first agreements with the U.S. and Israel
	Present a 5-year foreign policy blueprint to the public

4. Iran and Neighboring Countries

A) Week One: Official Messages to Neighboring Countries

Objective:

Prevent misunderstandings, reaffirm commitment to good neighborly relations, and invite regional cooperation.

Actions:

The interim government will issue formal diplomatic communications to all neighboring states, outlining the following reciprocal commitments:

- A formal request for recognition of the interim government
- A reaffirmation of friendship and a pledge of mutual non-interference
- A commitment to secure borders on both sides to prevent the infiltration of armed or terrorist groups
- A mutual guarantee of non-intervention in each other's internal affairs
- Reciprocal respect for each other's territorial integrity
- An open invitation to launch regional dialogue aimed at stabilization and cooperation
- A request that no former regime elements be granted asylum or safe haven by either side
- A pledge to uphold and not disrupt existing bilateral trade, transit, and customs agreements

B) Month One: Regional Visits by Interim Leaders or Special Envoys

Country	Core Objective	Initial Agreement Proposal
Turkey	Joint cooperation on terror/separatist groups and western border stability	Border security cooperation + Joint intelligence coordination hub
Iraq	Prevent IRGC-backed militias from crossing into Iran calm border tensions	Joint border monitoring + halt to Islamic Republic proxy influence
Azerbaijan	De-escalate ethnic tensions and pan-Turkist narratives + no Unilateral geopolitical changes	Non-support pact on separatist groups + maintain current geopolitical borders
Pakistan	Contain Jaish al-Adl and cross-border terrorism	Joint border outposts + termination of intelligence support for armed groups

Country	Core Objective	Initial Agreement Proposal
Afghanistan	Secure the eastern border and manage migration	Migration control + Taliban commitment to non-interference in Iranian affairs
Saudi Arabia	Initiate true de-escalation and redefine regional ties	Joint statement condemning proxy warfare and fostering regional détente
Qatar	Ensure financial and media neutrality end support for Islamic Republic affiliates	MOU on stability cooperation + commitment to avoid hosting anti-interim groups
UAE	De-escalate Persian Gulf tensions secure energy and trade flows	Diplomatic and trade normalization + energy corridor guarantees
Bahrain	Reassure on cessation of sectarian influence and respect for national sovereignty	Joint non-intervention declaration + confidence-building dialogue
Kuwait	Strengthen diplomatic ties and regional coordination	MOU on diplomatic cooperation + support for peaceful power transition
Turkmenistan	Preserve northeast border stability and ongoing energy partnerships	Border and energy agreements + continuation of joint gas and transit projects

C) Key Topics for Bilateral Negotiation

Security & Borders:

- Immediate cooperation on border management
- Preventing arms and militant infiltration

- Establishment of Joint Border Operation Rooms with each neighboring country

Intelligence & Counterterrorism:

- Intelligence-sharing on threats such as ISIS, PJAK, Jaish al-Adl, IRGC remnants, and separatist factions
- Confidential security and intelligence cooperation agreements

Non-Support for Separatist Groups:

- Mutual pledges to refrain from granting asylum or political support to separatist or militant groups

D) Immediate Actions in Cooperation with Neighbors

Official Declarations from Neighboring States

The interim government will request formal statements from neighboring countries affirming their support for Iran's stability, territorial integrity, and peaceful political transition.

Action

- Establish Joint Border Commissions with each neighboring country
 - Purpose: 24/7 bilateral monitoring of borders and swift resolution of tensions
- Reopen Military and Security Communication Channels
 - Between Iranian border commanders and their counterparts in neighboring states
- Enforce a Mutual Ban on Non-State Armed Group Movements
 - Joint measures to prevent the cross-border movement of militant or non-state actors
- Coordinate Humanitarian Aid Access
 - All humanitarian relief must flow through official and internationally monitored channels, under the authority of the interim government

E) Proposal for a Regional Framework

Launch of the "Iran Transition and Stability Mechanism" with Neighboring States

- Convene monthly meetings between Iran and all neighboring countries to review developments, share intelligence, and build confidence
- Invite participation by international observers from the United Nations or the European Union to enhance transparency and reinforce neutrality

5. Strategic Extra-Regional Relations During the Transition

During the transitional period, Iran's interim government will redefine its foreign policy based on mutual respect, international trust-building, and pragmatic cooperation with global powers. The primary objective is to ensure internal stabilization, address immediate security and economic threats, and reintegrate Iran into the international system.

A) United States of America

The interim government will prioritize full normalization of relations with the United States. This renewed relationship must be founded on mutual respect and shared interests—not hostility or dependence.

Iran seeks a strategic partnership with the U.S. that supports the lifting of sanctions, reinforces domestic and regional stability, and facilitates Iran's reintegration into the global economy.

Three-Month Roadmap:

- **Week 1:**
 - Send formal communications to the White House, U.S. Department of State, and U.S. Mission to the United Nations, including:
 - Official declaration of the end of the Islamic Republic
 - Willingness for immediate talks on sanctions and regional stability
 - Commitment to non-proliferation measures and treaties
 - Invitation to reopen embassies.
- **Month 1:**
 - Submit a formal request to suspend key sanctions (banking, energy, etc.)
 - Issue a public statement of commitment to full cooperation with the IAEA and nuclear transparency

- Propose bilateral talks and appoint a dedicated negotiation team.

- **Months 2–3:**

- Begin technical discussions on a phased sanctions relief mechanism
- Draft a bilateral agreement on trade and investment
- Initiate dialogue toward a strategic partnership modeled after U.S.–Iran cooperation in the 1970s.

B) Israel

Iran will formally recognize the State of Israel and initiate a rapid normalization process. This strategic pivot will mark a definitive end to the Islamic Republic’s adversarial ideology and open a path to long-term regional security and development partnership.

Three-Month Roadmap:

- **Week 1:**

- Issue an official statement:
 - Recognizing the State of Israel
 - Declaring the end of the Islamic Republic’s hostile policies
 - Inviting direct dialogue.

- **Month 1:**

- Establish a communication channel to initiate consultations
- Begin discussions on:
 - Opening embassies
 - Joint efforts to neutralize sabotage by remnants of the former regime
 - Cooperation in technology, agriculture, water security, cybersecurity, and energy
 - A mutual pledge to avoid unilateral or uncoordinated actions.

- **Months 2–3:**

- Sign a preliminary memorandum of strategic cooperation
- Launch institutional and security training programs, including:
 - Transfer of knowledge and best practices to Iran's law enforcement, intelligence, and border security forces
 - Expansion of cyber, intelligence, and judicial cooperation.

C) European Union

The European Union will be one of Iran's most important partners during the transitional and reconstruction periods. The interim government seeks a multidimensional partnership with the EU covering trade, investment, security, and humanitarian cooperation (including refugees and migration management).

Three-Month Roadmap:

- **Week 1:**

- Send formal messages to the European Council, Commission, and Parliament:
 - Announcing the regime change
 - Requesting political support for the interim government
 - Proposing cooperation on shared security challenges
 - Releasing all European citizens from detention.

- **Month 1:**

- Request the suspension of sanctions, including in banking, energy, and transportation
- Invite an official EU delegation to visit Iran
- Initiate discussions on emergency infrastructure investment.

- **Months 2–3:**

- Establish a joint task force to:
 - Restore banking and financial ties (including a return to SWIFT)
 - Attract EU investment in energy, transport, and advanced industries

- Develop a legal framework for migration and the resettlement of Iranian refugees.

D) China & Russia

Iran recognizes the global economic and military standing of both China and Russia. The interim government will seek a constructive, balanced, and transparent relationship with both countries.

Foundational Principles:

- Continuation of economic and technological cooperation without restrictions
- Comprehensive review and clarification of all opaque or non-transparent agreements
- Shift from geopolitical dependency to mutual strategic partnership.

Three-Month Roadmap:

- **Week 1:**
 - Send formal messages to Beijing and Moscow affirming:
 - Continued friendship
 - The end of the Islamic Republic's dependency model
 - A proposal for renewed strategic dialogue.
- **Month 1:**
 - Establish a review committee for strategic agreements, including:
 - The 25-year China–Iran agreement
 - Defense-related contracts with Russia
 - Invite selected Chinese and Russian firms for transparent investment initiatives.
- **Months 2–3:**
 - Draft a new framework for economic and defense cooperation
 - Define clear limits and mutual expectations—particularly non-interference in domestic or political affairs

- Sign a “Statement of Principles for Independent and Reciprocal Relations.”

E) India & Japan

As two advanced democratic Asian powers, India and Japan will be key partners for Iran in technology, sustainable development, and maritime security.

Three-Month Roadmap:

- India:
 - Resume the Chabahar port project and position it as a commercial hub for southeastern Iran.
- Japan:
 - Invite Japan to participate in health, green energy, and reconstruction projects.
- Geoeconomic Role:
 - Define Iran’s future role in Persian Gulf–Indian Ocean stability as a regional geoeconomic partner for both India and Japan.

F) International Institutions

Iran will immediately and comprehensively resume its engagement with international organizations. At the forefront of this effort is cooperation with the International Atomic Energy Agency (IAEA).

International Atomic Energy Agency (IAEA)

Week 1:

- Submit a formal letter to the IAEA:
 - Declaring readiness for unrestricted inspections of all nuclear sites
 - Committing to full transparency and cooperation.

Month 1:

- Welcome IAEA inspectors to begin on-site evaluations

- Develop a technical roadmap to resolve all outstanding nuclear issues
- Officially commit to the Additional Protocol and full compliance with the Non-Proliferation Treaty (NPT).

Months 2–3:

- Facilitate the publication of a preliminary positive report
- Use IAEA cooperation as a basis to lift nuclear-related sanctions
- Begin designing a long-term, peaceful nuclear energy program.

Other International Institutions

Week 1:

- Submit formal applications or reactivation requests for full engagement with:
 - The World Bank
 - The International Monetary Fund (IMF)
 - The World Trade Organization (WTO)

Month 1:

- Initiate negotiations for emergency technical and financial assistance
- Establish joint working groups focused on governance, public health, and education.

Months 2–3:

- Secure emergency financing to rebuild critical public services
- Rejoin global development and trade initiatives
- Reestablish Iran as an active and responsible member of the international community.

6. Iran's Role in Regional Order and Multilateral Cooperation Frameworks

During the transitional period, Iran must redefine and solidify its role as an anchor of regional stability. Guided by a non-ideological foreign policy, the interim government will seek to end the country's isolation and actively participate in shaping a new regional security and economic architecture.

Iran's regional policy will center on three strategic geographic zones:

- The Persian Gulf and Arabian Peninsula
- The Levant and Eastern Mediterranean
- Central Asia and the South Caucasus

A) The Persian Gulf and Arabian Peninsula

Strategic Objective:

Iran will seek to rebuild relations with the member states of the Persian Gulf Cooperation Council (GCC), end sectarian and ideological rivalries, and establish a regional framework for cooperation on security, energy, and maritime transit.

Actions & Timeline:

Week 1:

- The interim government will send formal diplomatic letters to all GCC member states, reaffirming:
 - Commitment to good neighborliness and non-intervention
 - Respect for the territorial integrity and political sovereignty of Arab states
 - An invitation to launch regional security and economic dialogue.

Month 1:

- Official visits or the dispatch of special envoys to Riyadh, Abu Dhabi, Doha, Kuwait City, Manama, and Muscat
- Begin bilateral talks on:
 - Maritime boundaries and security
 - Energy corridors and joint investments
 - Cooperation on curbing extremism and facilitating civilian technology transfers.

Months 2–3:

- Propose a multilateral mechanism involving:
 - Iran, the six GCC states, and observers from the United Nations or the European Union

- Advance the formation of a joint commission on energy and maritime security to manage crises and ensure stability in the Strait of Hormuz.

B) The Levant and Eastern Mediterranean (Iraq, Syria, Lebanon, Jordan)

Strategic Objective:

To bring an end to Iran's interventionist policies in the Levant and replace them with reconstruction cooperation, peace diplomacy, and joint management of migration, terrorism, and drug trafficking crises.

Actions and Timeline:

Week 1:

Send formal messages to the governments of Iraq, Syria, Lebanon, and Jordan, declaring:

- A complete halt to support for proxy groups
- A firm commitment to respect national sovereignty
- Willingness to cooperate on reconstruction and border security

Month 1:

Bilateral talks with the governments of Iraq and Syria focused on:

- Gradual withdrawal of Iran-linked paramilitary elements
- Maintaining diplomatic and security ties with official governments
- Participation in civilian reconstruction efforts in Syria and Iraq

Months 2–3:

Proposal to launch a UN-backed "Levant Peace Initiative" focused on:

- Coordinated reconstruction
- Counterterrorism and anti-narcotics cooperation
- Strengthening border management
- With participation from Iran, Iraq, Syria, Lebanon, Jordan, the EU, and regional observers

C) Central Asia and the South Caucasus

Strategic Objective:

To reinforce Iran's role as a geopolitical and economic bridge between the Middle East, Russia, China, and Central Asia—through expanded transit, energy, and border security cooperation.

Actions and Timeline:

Week 1:

Send formal diplomatic outreach to Turkmenistan, Uzbekistan, Kazakhstan, Tajikistan, Azerbaijan, and Armenia, including:

- An expression of readiness to deepen economic and transit ties
- A request for joint efforts to secure borders and counter smuggling and extremism

Month 1:

Bilateral discussions aimed at:

- Activating key transport corridors (such as the INSTC and Sarakhs–Bandar Abbas railway)
- Expanding exports of electricity, gas, and engineering services
- Launching trilateral consultations between Iran, Turkmenistan, and Azerbaijan

Months 2–3:

Iran will express its intent to take a more active role in regional economic bodies, such as:

- The Economic Cooperation Organization (ECO)
- Participation in regional rail and road connectivity projects

Summary: Proposal for a Comprehensive Regional Stabilization Mechanism

Proposed Mechanism: *"Iran Regional Transition & Stability Framework"*

Component	Description
Objective	Prevent foreign intervention, reduce tensions, and stabilize borders
Members	Iran + neighboring states (Turkey, Iraq, Pakistan, Afghanistan, GCC, etc)
Support	Monitored by the UN, European Union, and regional institutions
Mechanism	Monthly meetings, Border Security Coordination Center, Counterterrorism intelligence sharing
Message	Iran seeks peace, stability, and an active role in regional cooperation—grounded in mutual respect and national interest

7. Emergency Foreign Ministry Reconstruction Plan During Transition

In the early days of the transition, the Ministry of Foreign Affairs must come under the full political, administrative, and strategic control of the interim government. The objective is to restore international connectivity, prevent diplomatic vacuums, and initiate institutional rebuilding based on national interest and professional diplomacy.

Key Goals:

- Immediate control over the Islamic Republic’s diplomatic network
- Appointment of interim representatives to key countries and international bodies
- Ensuring uninterrupted embassy and consular services
- Launch of merit- and loyalty-based screening of diplomats

First 10-Day Action Plan

Week 1: Official Announcement by Interim Government

- Declare the end of ideological foreign policy
- Issue directives to all embassies:
 - Maintain administrative order and avoid abandonment or destruction of documents
 - Ban any independent political statements

Week 2: Appoint Interim Special Representatives to Key Countries and Institutions

Due to the urgency of certain relationships, the interim government will immediately dismiss current ambassadors of the Islamic Republic in key countries and appoint interim special envoys to:

- Deliver the message of regime change
- Open new diplomatic channels

Country / Institution	Government Action	Mission of Interim Representative
United States (UN & Washington)	Dismiss current ambassador, send interim envoy	Announce regime change, begin diplomatic engagement
United Kingdom	Dismiss ambassador, appoint interim envoy	Maintain ties with the Foreign Office, review financial and legal files
France	Dismiss ambassador, appoint interim envoy	Rebuild ties with the Elysée and the EU
Germany	Dismiss ambassador, appoint interim envoy	Cooperate on human rights, economic, and consular matters
Belgium (EU Institutions)	Dismiss ambassador, send envoy to EU bodies	Redefine Iran-EU relations

Israel	Appoint interim special envoy	Initiate new relations, launch strategic dialogue
--------	-------------------------------	---

Handling Other Embassies and Diplomatic Personnel

For all other ambassadors and mission staff:

- Those without ties to the Islamic Republic's intelligence, security, or ideological apparatus may, with approval from the interim head of government, continue temporarily in their roles.
- If a senior diplomat is suspected of ideological or security ties, their authority will be immediately transferred to a bureaucratic officer at the mission, pending further orders.
- In all cases, mission performance will be monitored by the central office in Tehran.

Continuity of Consular and Citizen Services

To prevent disruption in services for Iranian citizens abroad, the interim government will implement the following:

- Establishment of an Emergency Consular Task Force within the Ministry of Foreign Affairs
- Issuance of urgent directives to all embassies to continue:
 - Issuing passports and visas
 - Verifying official documents
 - Providing emergency services to Iranians abroad
 - Offering guidance on immigration, residency, marriage, birth, and death
 - Prohibiting any security-related or discriminatory behavior in handling citizen affairs
 - Providing immediate assistance to those with special circumstances, such as second-generation Iranians who lack Iranian passports or citizenship, including those who have been denied citizenship due to their father's non-Iranian nationality.

8. Emergency Structure of the Ministry of Foreign Affairs During the Transition

Domain	Proposed Action	Details
Leadership	Appoint a temporary head of the Ministry	Must be experienced, non-ideological, and patriotic
Administration	Establish a Diplomatic Vetting Committee	Review diplomats' records for past affiliations and conduct
Training	Launch a Diplomatic Reorientation Center	Align diplomats with the new foreign policy framework
Media & Transparency	Form a Diplomatic Transparency Unit	Publish reports on foreign contacts and communications
Regional Coordination	Set up a Neighboring States Coordination Desk	Facilitate regional diplomacy on security and border affairs

Core Principle: The Ministry of Foreign Affairs must not collapse—it must be swiftly freed from ideological control and rebuilt on the basis of professionalism, national interest, and responsible global engagement. This transformation will begin through immediate stabilization, fair screening, and professional retraining.

9. Proposal: Formation of a Special Task Force for Economic Diplomacy and Foreign Investment

Ministry of Foreign Affairs – Interim Government of Iran

Overall Objective:

To create a cross-sectoral, professional mechanism within the Ministry of Foreign Affairs to steer, facilitate, and accelerate foreign investment through proactive economic diplomacy in full coordination with the interim government's economic team.

A) Rationale for the Task Force:

- Urgent need for economic reconstruction and access to external resources
- Repositioning the Ministry of Foreign Affairs as a driver of economic development—not just political representation
- Fierce regional competition for foreign capital
- Iran's vast opportunities in energy, transit, industry, agriculture, and technology
- Necessity of strategic, internationally targeted economic diplomacy

B) Proposed Task Force Structure:

Section	Responsibilities
Central Secretariat	Strategic planning, coordination with government economic team, supervision of embassy-level operations
Public Sector Investment Office	Engage with governments, development funds, and multilateral banks (IMF, World Bank, ADB)
Corporate Engagement Unit	Interface with multinationals, SMEs, and global entrepreneurs
Public Economic Diplomacy Office	Craft Iran's investment messaging, media campaigns, and international content

Events and Outreach Division	Organize conferences, expos, investment summits, and "Iran Economic Week"
International Opportunity Office	Active presence in global economic forums, workshops in target countries, promotion of Iranian projects abroad

C) Key Missions and Action Items:

Short-Term (First 3–6 Months):

- Draft a comprehensive roadmap to boost economic diplomacy and attract Foreign Direct Investment
- Produce an Iran Economic Opportunities Booklet in English, French, Arabic, Chinese, and other languages
- Launch a multilingual online investment platform for Iran
- Participate in at least 3 major global economic conferences (e.g., Davos, OECD, JETRO, GITEX)
- Host investment opportunity workshops in strategic countries

Medium-Term (6–18 Months):

- Deploy Economic Counselors to 20 key embassies
- Sign bilateral investment agreements with at least 15 countries
- Establish joint Iran–Global Investment Chambers
- Organize an annual "New Iranian Economy International Conference" in Tehran or a third country

D) Core Principles:

- Transparency and anti-corruption in investment promotion
- Guarantee of capital repatriation and protection of property rights

- Focus on job-creating and export-oriented projects
- Pragmatic, non-ideological engagement with all global powers and markets

E) Coordinating Body:

Office of Economic Diplomacy

Under the Special Economic Deputy of the Ministry of Foreign Affairs

In coordination with the Ministries of Economy, Oil, Industry, Central Bank, Chamber of Commerce, and the Office of the Interim Head of Government

8. Military and Security

Military

I. Introduction

Transitional Government Plan for Reforming and Rebuilding Iran's Military Structure

The Iran Prosperity Project introduces this comprehensive plan to reform the country's military structure, aimed at preserving public order, ensuring national security, defending territorial integrity, and initiating a democratic transition. This plan draws on crucial historical lessons, including particularly the catastrophic errors made after the 1979 revolution. It is designed to prevent retaliatory policies, mass purges, and the disintegration of security institutions while ensuring the survival of the new political order, securing borders, and preventing the return of the ancient régime. The approach is rooted in reform, reconstruction, maximum reintegration, and leveraging existing capacities, not the destruction or dismantling of all institutions. The plan retains individuals who are capable of contributing positively to the future of Iran, which encompasses the majority of the rank and file. Those who are not criminals, but for various reasons, cannot be integrated into the future military and security establishment will be retired, with measures in place to assist their transition to new jobs. Furthermore, we will ensure that the most egregious offenders—those with blood on their hands—are referred to the judicial system to face trial in a transparent legal process.

II. Core Strategic Priorities During Transition

1. Preparedness for Crisis Management During the Transition Period

- The Transitional Government will design and implement emergency plans to maintain security and political stability during the transition phase.
- Reconstitute the military forces by integrating the organized revolutionary cells and with the help of defectors previously identified and vetted through the defection platform and other means.
- Reconstituted security forces must professionally and effectively confront any organized resistance, acts of sabotage, or armed threats from the former regime's repressive institutions.
- Military command must focus on preserving internal cohesion, preventing mutiny, managing factional loyalties, and upholding order.

- The Transitional Government must carefully execute contingency plans to prevent coups or attempts by regime loyalists to reclaim power.

2. Immediate Reactivation of Law Enforcement, Border Security, and National Security Institutions

- The Transitional Government must issue an immediate directive to reinstate operational duties across institutions such as law enforcement, border control, customs, counterintelligence units, and the defenders of Iran's land, air, and maritime borders.
- Under new oversight, these institutions must resume their role in maintaining domestic order and safeguarding national borders without interruption.
- Timely and full payment of salaries, benefits, and welfare support for all military and law enforcement personnel must be a top priority to prevent disaffection, unrest, and security gaps.
- The Transitional Government underscores that the country is not collapsing; only the corrupt, ideological, and regime-loyal leadership must be removed; existing institutions must swiftly return to functionality.

3. Distinguishing Regime Loyalty from Criminal Conduct

- The Transitional Government must clearly distinguish between individuals who served professionally in the former regime's military and security institutions and those directly involved in repression, torture, corruption, or criminal activity.
- The judiciary must remove and prosecute ideological leaders, perpetrators of abuses, and violators of human rights, while retaining and reintegrating technical experts and professional personnel.

4. Avoiding Widespread Purges: Lessons from Iraq and 1979

- The Transitional Government is obligated to avoid the historic errors of Iraq's de-Baathification and the collapse of Iran's military following the 1979 incident.
- Large-scale purges of the military rank-and-file would trigger instability, create security vacuums, provoke unrest, and strengthen extremist groups.
- The government's official policy will emphasize maximum reintegration, retraining, and the peaceful, phased transition of institutional structures.

5. Establishing Fair Vetting Committees for Personnel Review

- The Transitional Government must form independent institutions tasked with reviewing the background of military and security personnel on a case-by-case basis, ensuring transparency and the right to defense.
- These committees must base their decisions on individual responsibility, not mere organizational affiliation.
- Those who successfully pass this process may be reintegrated into the new institutional structure at the discretion of the Transitional Government's leadership and in accordance with flexible criteria.

6. Temporary Use of Existing Structures to Prevent a Security Vacuum

- Until the new military and security institutions are fully organized and operational, the Transitional Government must rely on existing structures to maintain public order, defend national sovereignty, and secure the borders.
- Rebuilding the military from scratch is unnecessary, costly, and dangerous.

7. Gradual Integration of Armed Forces Instead of Sudden Dissolution

- The government must retrain and gradually integrate qualified members of the IRGC and Basij into the new national military, once their ideological roles have been eliminated.
- This process must be carried out with caution and aimed at maintaining security, ensuring a smooth transfer of power, and preventing the rise of destabilizing forces and terrorist groups.

8. Rebuilding Trust with Former Military and Security Personnel

- The Transitional Government must emphasize through official messaging and concrete actions that the objective is reform, not revenge.
- Everyone, especially mid- and lower-ranking personnel, must be treated with respect and dignity to eliminate the roots of insubordination, distrust, or resistance.
- The transitional judiciary must ensure fair, transparent, evidence-based legal proceedings against the architects and executors of systemic repression, not collective punishment of the rank-and-file.

9. Guaranteeing Livelihoods and Job Security During the Transition

- The government must implement programs for retraining, phased retirement, re-employment, and targeted redeployment of former personnel to prevent financial hardship and psychological distress among the armed forces.

10. Preserving Institutional Military Memory

- The Transitional Government must document, retain, and utilize the accumulated tactical, intelligence, logistical, and geographic knowledge of experienced military personnel in the design of the new defense structure.

III. Principles of Democratic Military Reform

11. Separating the Military from Politics and Ideology

- The government must completely remove ideological influence from the military structure and eliminate institutions such as the IRGC from the armed forces.
- The new national army must demonstrate loyalty to a democratic constitution and to the defense of the country and its people, not to religious or political leadership.

12. Integration of Armed Forces and Elimination of Parallel Structures

- The Transitional Government must merge all armed entities, including the Artesh (conventional army), IRGC, and other forces, into a single, unified, centralized, and accountable military structure.
- Unified command, reduced bureaucracy, and enhanced operational efficiency must be prioritized.

13. Establishing a Professional, National, and Accountable Army

- The government must redefine the military as an independent, professional institution loyal to national sovereignty and the people, not to any political figure or ideology.
- The armed forces must be accountable to democratic institutions and they must be prohibited from engaging in political, economic, or media activities.

14. Commitment to the Principle of Iran's Territorial Integrity

- The new national army must be fully committed to defending Iran's territorial integrity, national independence, and geographic unity against any foreign or domestic threat.

- Armed forces must treat any ethnic, political, or military effort aimed at partitioning the country as a national security threat and respond accordingly.
- This principle must be institutionalized in the national defense doctrine, military training, and command structure.

IV. Institutional Modernization and Capacity Building

15. Focus on Modern Training and Human Capital Development

- The government must overhaul the military education system to prioritize technical skills, cyber warfare, intelligence analysis, crisis management, and democratic and human rights principles.
- Equal opportunity must be guaranteed for all segments of society, regardless of ethnicity, religion, gender, or sexual orientation.

16. Financial Transparency and Smart Defense Budgeting

- The government must combat corruption, patronage, and wasteful projects within the defense sector.
- Concrete plans must be developed to recover lost assets, lift international sanctions, and attract foreign assistance.
- Defense budgets and financial reports must be made publicly available in a transparent and accountable manner.

17. Establishing a System for Performance Evaluation and Oversight

- The government must create mechanisms to evaluate the progress of military reforms, assess operational efficiency, and ensure accountability within the chain of command.
- Modern, data-driven technologies must be employed to enhance transparency and oversight.

18. Enhancing Morale and Welfare of Military Personnel

- The Transitional Government must provide competitive salaries, healthcare, educational support, and career opportunities for military personnel and their families to boost morale, reinforce loyalty, and restore public trust in the armed forces.

19. Modernization of Military Equipment and Technologies

- The government must invest in emerging technologies such as drones, cyber defense, electronic warfare, and artificial intelligence.
- The armed forces must collaborate with universities and research institutions to develop advanced military systems and replace outdated equipment.

20. Developing Defense Diplomacy and International Cooperation

- The Transitional Government must end Iran's militaristic regional adventurism and instead commit to international peacekeeping efforts and United Nations missions.
- Iran must cultivate defense partnerships with regional and global democratic states to strengthen deterrence and promote constructive military engagement.

V. Phased Reconstruction Timeline (24 Months)

Overarching Goal:

To guide the country from the collapse of the Islamic Republic toward the establishment of national, democratic, accountable, and security-centered institutions.

Phase I: Immediate Post-Regime Collapse (0–3 Months)

Objective:

Stabilize the crisis, prevent a power vacuum, maintain order, and begin dismantling the regime's former structures.

Key Actions:

- Declare the army's neutrality and call upon law enforcement, border security, and intelligence forces to return to duty under new oversight.
- Peacefully secure, repurpose, reintegrate, and where needed suspend and/or shut down critical regime's military institutions .
- Issue directives banning the use of force against civilians and implement a conditional general amnesty for non-criminal military personnel.
- Secure borders, key infrastructure, and national resources (oil, energy, central bank, airports, power plants).

- Ensure immediate payment of salaries to military personnel, teachers, healthcare workers, and civil servants to prevent social collapse.
- Officially launch the project to “redefine the military’s identity” as a national, non-ideological institution under the Transitional Government.

Phase II: Institutional Reconstruction (3–12 Months)

Objective:

Design and implement national security, intelligence, law enforcement, and judicial institutions to replace the former regime’s repressive structures.

Key Actions:

- Establish a National Intelligence and Security Service (NISS) with a transparent structure reporting to the Transitional leader.
- Reform the national police and retrain officers with a focus on civil order, human rights, and democratic oversight.
- Deploy Community Oversight Boards to monitor the conduct of police and security personnel.
- Strengthen border security in areas where the probability of a potential threat is heightened
- Create transitional courts and Truth and Accountability Commissions to address crimes, corruption, torture, and repression under the former regime.
- Design a Modern Border Security Program in collaboration with the army and retrained forces, using advanced surveillance technologies.
- Gradually integrate former members of the IRGC, Basij, and intelligence organizations into new military and civilian institutions who pass rigorous vetting and are not a threat to the new political order.
- Draft a Law Prohibiting Military Involvement in Politics.
- Rebuild military academies focusing on professional training, cyber warfare, international law, and non-ideological defense.
- Launch a personnel registration and evaluation system to determine eligibility for retention, retirement, or prosecution.

Phase III: Institutional Consolidation and Handover (12–24 Months)

Objective:

Institutionalize professional, accountable security and defense structures and prepare for handover to an elected civilian government.

Key Actions:

- Ensure full Transitional Government control over the army, police, border forces, and national security through a provisional parliament and oversight committees.
- Establish a professional military intelligence unit to counter espionage and hostile infiltration, under an international cooperation framework.
- Reform the Ministry of Defense and armed forces' support institutions to reduce bureaucracy and corruption.
- Complete the integration of former regime military structures and dissolve any remaining legacy institutions.
- Launch a National Defense Studies Center to develop defense doctrine, train officers, and promote regional cooperation.
- Initiate participation of Iranian armed forces in regional peacekeeping missions coordinated with the United Nations.
- Gradually enroll military personnel in international training programs and multilateral defense missions.
- Design a transparent public reporting and annual review mechanism for all defense and security institutions.
- Prepare institutional infrastructure for the formal handover of power to a popularly elected government.

VI. Restructuring Iran's Military and Security Forces

Core Principles of Transitional Security Reform

De-ideologization:

The complete removal of religious, sectarian, and revolutionary influence from the military, police, and security institutions.

Depoliticization:

A total ban on political, partisan, or propaganda activities by the armed forces and intelligence services.

Integration:

Gradual, transparent, and conditional incorporation of qualified personnel from previous institutions into new structures, maximizing retention of capable individuals.

Professionalization:

Standardization of training, promotions, command hierarchy, and oversight in line with international norms and best practices.

Security with Trust:

Ensuring national security while rebuilding public trust in the military, law enforcement, and intelligence services.

VII. Structural Assessment of Armed Forces and Paramilitary Organizations

Institution	Function	Category
Intelligence Agencies		
Ministry of Intelligence Organization	Domestic and foreign intelligence	Removal of top officials, screening, and absorption of mid-level personnel into the new intelligence organization
IRGC Intelligence	Parallel intelligence focused on dissent and cyber operations	Screening, removal of top officials, integration of staff into the new intel body, and dissolution of the old organization.
Basij Intelligence	Neighborhood informant network	Dissolution of the organization

FARAJA Intelligence	Local surveillance using civilian informants	Removal of top officials while preserving the organization
Quds Force Intelligence	Intelligence collection for external operations	Dissolution of the organization
IRGC Counterintelligence	Internal counterintelligence within the IRGC	Dissolution and integration into the national army
Artesh Counterintelligence	Security oversight of Artesh and its commanders	Retaining the structure and ensuring operational continuity after vetting
Military Forces		
IRGC Aerospace Force	Advanced missile and drone capabilities	Dissolution and integration into the national army
IRGC Ground Forces	Ground military force loyal to the Supreme Leader	Dissolution and integration into the national army

IRGC Navy	Asymmetric naval warfare	Dissolution and integration into the national army
Artesh Ground Forces	Conventional ground warfare, politically sidelined	Retaining the structure and ensuring operational continuity after vetting
Quds Force	Foreign operations and proxy warfare	Dissolution of the organization
Artesh Navy	Conventional naval defense	Retaining the structure and ensuring operational continuity after vetting
Artesh Air Force	Conventional air force operations	Retaining the structure and ensuring operational continuity after vetting
National Organization for Passive Defense	Technical-intelligence operations for infrastructure and cyber defense	Retaining the structure and ensuring operational continuity after vetting
General Staff of the Armed Forces	Strategic military planning and overall command	Removal of top officials, After vetting existing personnel, defectors may remain but ideological forces will have to retire, the structure will be retained after significant reforms

Office of the Supreme Leader's Military Affairs	Supreme Leader's military decision-making office	Dissolution of the organization
Basij Organization	Paramilitary force used for domestic suppression, ideological control, cyber operations, and proxy recruitment	Dissolution of the organization
Law Enforcement Command (FARAJA)		Law Enforcement
Traffic Police (Rahvar)	Urban and highway traffic control	Retaining the structure and ensuring operational continuity after vetting
Public Security Police (PAVA)	Organized crime and public morality enforcement	Retaining the structure and ensuring operational continuity after vetting
Morality Police (Gasht-e Ershad)	Enforcing Islamic dress code, harassment of women	Dissolution of the organization
Immigration and Passport Police	Passport issuance, visa control, and foreign nationals	Retaining the structure and ensuring operational continuity after vetting

Diplomatic Police	Protection of embassies, diplomats, and international facilities	Retaining the structure and ensuring operational continuity after vetting
FARAJA Intelligence Organization	Main intelligence branch of law enforcement, monitoring domestic threats and dissidents	Dismantling the repressive component and leadership, screening personnel, and restructuring the organization with the primary goal of preserving national security and public safety
Cyber Police (FATA)	Monitoring and repressing cyber dissent and online crimes	Dismantling the repressive component and leadership, screening personnel, and restructuring the organization with the primary goal of preserving national security and public safety
Criminal Investigation Police (Agahi)	Criminal investigations, evidence gathering, and case building	Retaining the structure and ensuring operational continuity after vetting
Prevention Police	Command of all police stations and security outposts; general law enforcement deployment	Retaining the structure and ensuring operational continuity after vetting
Border Guard Command	Border security for land, sea, and air	Retaining the structure and ensuring operational continuity after vetting
Anti-Narcotics Police	Counter-narcotics operations	Retaining the structure and ensuring operational continuity after vetting

Police Emergency Response Center (110)	Emergency police response and unit dispatch- Call Center 110	Retaining the structure and ensuring operational continuity after vetting
Military Service Organization	Conscription management and exemption processing	Preserve after going through reform and professionalization
International Police (Interpol Iran)	International criminal pursuit and coordination with Interpol	Retaining the structure and ensuring operational continuity after vetting
FARAJA Special Units	Riot control, protest suppression, special ops, and critical site protection	Dismantling the repressive component and leadership, screening personnel, and restructuring the organization with the primary goal of preserving national security and public safety
NOPO Special Operations Unit	Hostage rescue, anti-terror, riot response, and tactical law enforcement	Dismantling the repressive component and leadership, screening personnel, and restructuring the organization with the primary goal of preserving national security and public safety

VIII. Key Challenges and Solutions in Military-Security Reform

Challenges and Solutions in the Process of Security–Military Reform During the Transitional Period

CHALLENGE	PROPOSED SOLUTION
Sabotage attempts by loyalists of the former regime (within security, intelligence, and logistics forces)	Integration of organized revolutionary cells, elevation of defected members of the security and military establishment inside the organizations; Immediate implementation of a personnel vetting system; identification, demobilization, and apprehension of organized loyalists to the old regime that will be a threat to the new political order; contingency plans for different scenarios; establish confidential internal reporting channels.
Security vacuum and emergence of parallel or armed militias (as seen in Iraq, Libya)	Rapid deployment of neutral and trained forces to maintain public order in urban areas; temporary curfews in critical zones; phased reintegration of retrained legacy forces.
Foreign interference from hostile regional and international powers (e.g., Russia, China, proxies like Hashd Al-Shabi, Hezbollah, Ansar Allah)	Swift formation of a regional security coalition with neighboring states and willing global actors; joining collective defense agreements; building multilateral deterrence capacity.
Public distrust of armed institutions, particularly given the legacy of repression and violence	Structural reforms in judiciary, law enforcement, and intelligence agencies; guarantees of transparency, civilian oversight, and command accountability; launch of national reconciliation and truth-finding initiatives.
Shortage of trained, competent, and democratically loyal personnel	Partnership with international training institutions for accelerated leadership development.
Lack of experience in managing military crises within the new structures	Establishment of a “National Security Crisis Management Center” composed of domestic and international experts; use of data-driven technology for threat forecasting and control.

Moral and psychological collapse or demoralization among legacy personnel	Immediate improvement of welfare, pay, professional conditions, and healthcare; national messaging focused on ending revenge and beginning inclusive national reconstruction.
Infiltration of former regime intelligence networks into new structures	Total systematic removal of suspicious elements from security systems; dismantling of parallel intelligence structures; creation of a National Intelligence Service under parliamentary oversight.
Separatist and ethno-sectarian threats in border regions	The new army must enforce a doctrine of territorial integrity while upholding inclusive justice and equal citizenship rights; a firm yet strategic response to all separatist activity.

IX. Operational Implementation Companion to Iran's Transitional Military Reform Plan

PHASE 0: Pre-Fall Operations & Strategic Preparation

Goal:

Establish command continuity, weaken the regime internally, and position transitional forces for rapid takeover.

Strategic Priorities:

- Achieve internal intelligence superiority.
- Encourage internal defections and disarm loyalty.
- Build forward-operational capabilities and diaspora integration.

Key Initiatives:

National Defection & Cooperation Platform (NDCP):

- Physical and encrypted digital channels for regime defectors.
- Real-time vetting + facial biometric mapping.
- Pre-assignment registry for defectors into transitional units.

Secure Command Continuity Protocol (SCCP):

- Multi-region emergency bunkers and satellite comms.
- Hidden data vaults with succession orders.
- Redundant communication chains via diaspora & allied nodes.

Credentialing & Mapping Cell (CMC):

- Geospatial and AI fusion to map IRGC/MOIS assets, tunnels, airbases, and proxies.
- Predictive modeling of power vacuum zones.

Regional Threat Fusion Center (RTFC):

- Regional joint monitoring node for cross-border threats.
- Proxy monitoring (PMF, Hezbollah, others).

Diaspora Intelligence Integration Program:

- Background-verified diaspora security professionals ready for redeployment.
- Immediate fill-ins for judicial, cyber, forensic, and executive security roles.

Red-Team Simulations (RTS):

- Insurgency drills, chemical/nuclear seizure simulations.
- Failure chain detection in the current command simulation.

War Damage Integration Protocol (WDIP):

- Leverage regional intelligence and logistics partnerships to assess military sites and prepare contingency infrastructure plans.
- Develop contingency barracks and triage hubs.

PHASE A/B1: Days 1–10 | Seizure and Stabilization

Strategic Focus:

- Decapitate regime control
- Secure national command zones
- Establish a visible, lawful transitional authority

Key Actions:

- **Artesh Deployment:** Immediate presence in Tehran, Tabriz, Esfahan, Khuzestan, Sistan, Bandar Abbas, and border provinces
- **Cyber Neutralization Cell (CNC):** Shut down regime comms and databases within 48–72 hours.
- **Emergency Broadcast Authority (EBA):** Launch national unity messages, counter disinformation.
- **Rapid Containment Force (RCF):** Eliminate active IRGC/Basij resistance cells.
- **Critical Infrastructure Security:** Deploy vetted Artesh personnel to secure energy, water, oil, gas, and power plant facilities from sabotage attempts.
- **Curfews and Martial Control:** Military curfews in 20 hotspot cities.
- **Military Base Seizure Units (MBSU):** Artesh-loyal forces take IRGC arsenals.
- **Artesh Loyalty Protocol:** Redeploy loyalists and isolate regime loyalists.

PHASE A/B2: Days 11–40 | Vetting, Disarmament, Neutralization

Strategic Focus:

- Begin the dismantling of regime structures
- Establish judicial and intelligence control
- Counterintelligence

Key Actions:

- **Three-Tier Vetting Protocol (Category A/B/C):** Personnel classified for retention, retraining, or prosecution.
- **Transitional Intelligence Tribunal Command (TITC):** Coordinate arrests of torturers, political murderers, and cyber agents.
- **Controlled Amnesty Framework:** Disarm the regime's militant groups, reeducate and monitor.
- **Basij & Herasat Dismantlement Program:** Close down university-based and mosque-linked surveillance networks.
- **Counterintelligence Surge Teams (CST):** Sweep ministries, telecom firms, and military units.
- **Aerospace & Naval Transfer:** Secure drone stockpiles, IRGC aircraft, mines, radar.
- **Joint Airspace Monitoring Protocol:** Coordinate early warning systems with allies.

PHASE A/B3: Days 41–100 | Institutional Establishment and Civilian Control

Strategic Focus:

- Build upon the current national security and defense institutions with a renewed vision and mandate. These institutes will build on the existing national security and defense infrastructure, but under a renewed vision, mandate, and chain of command aligned with democratic principles. While physical assets and organizational structures may be retained to ensure continuity and prevent a security vacuum, the names, missions, and functions of these institutions will be redefined to reflect a new era of civilian oversight and lawful governance. Personnel from legacy institutions—such as the IRGC—may be repurposed following rigorous vetting, retraining, and psychological evaluation, provided they were not involved in acts of repression. For example, technically skilled professionals who served in non-combat or non-abusive roles may be redeployed to support the Artesh or integrated into the newly established intelligence services. This selective reintegration process is designed to preserve valuable expertise while ensuring alignment with the values and mission of the transitional government.
- Establish a rule-of-law-based security doctrine
- Enable civilian oversight

Key Actions:

- **National Intelligence and Security Service & Iranian National Police Formation:**
 - Internal (counterintelligence, state security), External (espionage, proxy tracking), and Cyber Divisions.
 - Iran National Police is demilitarized and civilian-trained.
- **National Security Academy (NSA):** Rapid induction program; ethics, chain of command, global law.
- **Artesh Command Framework:** Artesh-led, accountable, zero political affiliation.
- **National Guard Activation:** Rapid-response civilian support and disaster unit.
- **Transitional Financial Intelligence Taskforce (TFIT):** Seize and reallocate assets of IRGC-linked conglomerates.
- **Security Transparency Dashboard:** Public-facing portal for arrests, vetting results, and tribunal outcomes.

PHASE A/B4: Days 101–140 | Global Integration and Legalization

Strategic Focus:

- Legalize and validate new structures
- Build international alliances and ensure transparency
- Public reconciliation and high-value prosecutions

Key Actions:

- **NSRB Oversight Activation:** National civilian board to audit all military/security bodies.
- **Civilian Security Forums:** Town halls for grievances, transparency, and accountability reports.

PHASE A/B5: Days 141–180 | Stress Testing, Trust Building, Final Transfers

Strategic Focus:

- Run simulations to validate reforms
- Reinforce public trust and readiness

Key Actions:

- **National Stress Test Series:**
 - o Cyberattack war game
 - o Civil unrest response drill
 - o Proxy insurgency simulation
- **National Intelligence Neutrality Directive:** the intelligence agency remains non-partisan
- **Veteran Classification Publication:** Names of all vetted actors categorized into retained, retired, prosecuted, or exiled.
- **Permanent Oversight Bodies:** Install independent civilian inspectors-general for all military/security units.

Strategic Outcomes by Day 180

- **Security Agencies:**
 - o The National Intelligence, Security Service, and Iranian National Police are fully operational.
 - o IRGC, Basij, Quds Force dissolved.
- **Military Forces:**
 - o Artesh and Transitional National Guard are functioning under civilian command.
 - o All borders secure; aerospace and navy integrated.
- **Public Institutions:**

- o Oversight bodies and public dashboards are functional.
- o Civilian-police engagement reestablished.
- **International Legitimacy:**
 - o UN-verified trials and reforms.
 - o Joint security cooperation with allies.
- **Stability Indicators:**
 - o No mass surveillance.
 - o Transparent justice.
 - o Civil-military separation upheld.

Recommendations

Establish Secure Satellite Communication Hubs In Exile And In Hidden Domestic Zones Pre-Collapse.

1. Justification: In transitional or collapsed states, conventional communication infrastructure is one of the first systems to be targeted or disrupted, either by regime loyalists, foreign adversaries, or opportunistic non-state actors. Secure, encrypted satellite communication hubs in exile and within Iran's borders ensure continuity of command, facilitate real-time coordination among transitional leadership, and prevent information blackouts. These hubs will serve as the backbone for command integrity, civil-military coordination, and public broadcasting in the critical first 72 hours after regime collapse.

Build A Trusted Diaspora Advisory Command (DAC) To Consult The STSC and Integrate Foreign-Vetted Personnel.

2. Justification: The Iranian diaspora includes a large cohort of security, intelligence, cyber, and legal professionals trained in NATO, U.S., and EU institutions. Their strategic experience, coupled with cultural fluency and national loyalty, make them uniquely positioned to fill immediate capability gaps in the transitional security and governance structure. The DAC provides a formalized, vetted advisory structure that leverages this pool without opening the transition to infiltration or disjointed influence. It also ensures lessons from Iraq and Afghanistan transitions—where local capacity-building was rushed—are applied prudently.

9. Asset Control

Overview:

This section outlines the strategic approach for Iran Asset Recovery during the transitional period, focusing on providing an actionable blueprint to enable a transitional authority or an international coalition to locate, secure, and repatriate Iran's stolen or endangered public wealth while preventing regime loyalists from using these assets to sabotage the transition.

The plan is predicated on a scenario following the June 2025 Israeli attacks and any subsequent collapse of central authority in Iran. It provides a comprehensive, detailed operational plan to secure, freeze, and recover all significant assets controlled by the Islamic Republic regime, with specific details for each category of assets and the mechanisms of their control, ownership, or transfer.

Importance of IAPI:

The recovery of the Islamic Republic's assets is crucial during the transition period to ensure the financial viability of a new governing authority. The repatriation of this wealth is essential for funding national reconstruction, stabilizing the economy, and providing essential services to the Iranian people. Crucially, securing these assets prevents former regime loyalists and their networks, particularly the IRGC and associated bonyads, from financing an insurgency, fomenting instability, or otherwise sabotaging a peaceful and democratic transition. This operation is a cornerstone of ensuring national security and establishing a foundation for legitimate governance and long-term economic prosperity.

9.1. Objectives

The objectives of this operational plan are clearly defined goals that are both strategic and measurable. The primary objectives are:

- **Locate and Secure Public Wealth:** To systematically identify, locate, and secure all significant assets, both domestic and international, that are under the direct or indirect control of the Islamic Republic regime and its key institutions.
- **Prevent Sabotage:** To neutralize the financial capacity of regime loyalists and prevent them from using these vast resources to undermine the transitional authority or instigate conflict.
- **Names and Sectors:** Bonyads and Setad control hundreds of companies across virtually every sector of the Iranian economy, including finance, construction, manufacturing, pharmaceuticals, and

telecommunications. Examples include the Sina Bank (Bonyad Mostazafan), Tadbir Group (Setad), and Sadra Iran Marine Industrial Company (Khatam al-Anbiya).

- **Ownership Layers:** Ownership is deliberately obscured through complex, multi-layered holding structures, where a parent bonyad owns a holding company, which in turn owns a portfolio of subsidiaries, making it difficult to trace ultimate beneficial ownership.
- **Enable Recovery and Repatriation:** To establish the legal and operational groundwork for the eventual recovery and repatriation of all stolen or misused public wealth for the benefit of the Iranian people.
- **Promote Accountability:** To preserve financial records, archives, and other digital evidence essential for future investigations into corruption, human rights abuses, and the regime's military and nuclear programs.

9.2. Key Priorities

The key priorities are the areas of focus that will guide resource allocation to ensure the successful achievement of the objectives.

- **Priority 1: Speed and Secrecy in Initial Operations:** The highest priority is the rapid execution of the initial asset seizure and freezing operations (H-Hour to H+72) with maximum operational security. This is critical because any delay or information leak would allow regime insiders to transfer liquid assets (cash, crypto, electronic funds) and destroy incriminating records, rendering subsequent recovery efforts exponentially more difficult and less fruitful.
- **Priority 2: Securing Physical and Digital Infrastructure:** The immediate physical control of critical economic and administrative locations (e.g., Central Bank, bonyad headquarters, data centers) is a top priority. This is to prevent looting by the public, sabotage by loyalists, and the destruction of crucial evidence and institutional records needed for governance and future prosecutions.
- **Priority 3: International Legal and Diplomatic Action:** A concurrent priority is the immediate activation of international legal mechanisms and diplomatic channels. This is essential because a significant portion of the regime's wealth is held offshore, often through complex ownership structures. Swift notification to international bodies like FATF, Interpol, and partner nations is required to freeze these assets before they can be moved to non-cooperative jurisdictions.
- **Priority 4: Establishing Legitimacy through Communication:** A proactive and transparent public communication strategy is a vital priority. This is necessary to build domestic and international support

for the transitional authority, prevent public panic, manage expectations regarding the recovered wealth, and counter disinformation from regime remnants.

9.3. Assumptions

The viability of this plan rests on several key assumptions, which are the conditions that should be satisfied for the plan to work.

- **Scenario Assumption:** The plan operates under the assumption of a collapse of central authority in Iran following an external attack or people's uprising event, creating a window of opportunity for a transitional authority to act.
- **Operational Control:** It is assumed that a nascent transitional authority, supported by either cooperative elements of the regular military (Artesh) or an international coalition, can establish physical control over key locations in Tehran and other major cities.
- **International Cooperation:** The plan assumes the political will of key international partners (e.g., the United States, the European Union, the United Kingdom, Switzerland, Turkey, and the UAE) to act swiftly on notifications to freeze assets and provide intelligence support. It also assumes that international sanctions frameworks can be repurposed to support the new authority.
- **Insider Cooperation:** It is assumed that a certain number of technocrats, bank officials, and bureaucrats within the targeted organizations will be willing to cooperate in exchange for amnesty or other incentives, providing crucial intelligence on asset locations and ownership structures.
- **Existence of Records:** The plan assumes that despite potential efforts at destruction, significant digital and physical records of asset ownership, financial transactions, and corporate structures will still exist and be accessible within the secured facilities.

9.4. Actions

The actions are the specific tasks required to execute this operational plan. They are sequenced to maximize effectiveness in a post-collapse environment.

Foundational Action: Identification and Description of Assets

This phase involves the detailed cataloging of all known significant assets controlled by the regime.

Financial Assets

Domestic Bank Accounts:

- **Names of Banks:** Central Bank of Iran (CBI), Bank Melli, Bank Saderat, Bank Mellat, Bank Tejarat, Bank Sepah. These institutions are used to hold the state's primary accounts, process oil revenues, and finance government operations. Parastatal entities like bonyads also hold vast portfolios in these banks, often in complex, layered accounts to obscure ownership.
- **Estimated Balances:** While precise figures are unattainable, estimates place tens of billions of dollars in accessible foreign currency reserves within the CBI and other state-owned banks. Domestic currency (Rial) accounts held by bonyads and Setad are estimated to be in the trillions.
- **Account Structures:** Use of layered accounts, nominee accounts held by trusted individuals, and inter-bank transfers designed to obfuscate the ultimate beneficiary.

Offshore Accounts:

- **Jurisdictions:** United Arab Emirates (Dubai), Turkey, Switzerland, Luxembourg, Malaysia, China (Hong Kong), and various Caribbean nations.
- **Front Companies:** Extensive use of front companies in trading, construction, and consulting sectors, registered in the above jurisdictions, to hold accounts and conduct international transactions. Notable examples include companies linked to the IRGC's Khatam al-Anbiya and subsidiaries of bonyads.
- **Known Intermediaries:** A network of trusted businessmen, dual nationals, and family members of senior officials act as signatories and beneficial owners for these offshore accounts.

Known Cash Reserves and Gold Holdings:

- The Central Bank of Iran's treasury in Tehran is the primary repository for the nation's gold reserves and physical foreign currency.
- Significant undeclared cash and gold holdings are believed to be stored in secure vaults controlled by the bonyads (especially Bonyad Mostazafan) and the IRGC, outside of the official state system.

Cryptocurrencies or Other Digital Assets:

- The regime has utilized cryptocurrencies like Bitcoin (BTC) and Monero (XMR) for sanctions evasion and illicit financing.

- Mining operations have been established within Iran, and assets are held in a combination of domestic and international exchanges, as well as private, un-hosted wallets that are difficult to trace.

Physical Assets

Real Estate Portfolios:

- **Properties and Locations:** Bonyad Mostazafan is Iran's largest property holder, controlling vast portfolios of commercial, residential, and agricultural land, much of it confiscated post-1979. This includes prime real estate in Tehran, Isfahan, and other major cities, as well as significant holdings abroad, particularly in Europe and the Middle East, held through front companies. Setad (EIKO) also controls thousands of properties seized by court order.
- **Valuation:** The total value of real estate controlled by bonyads and Setad is estimated to be in the hundreds of billions of dollars.

Oil, Gas, and Petrochemical Infrastructure:

- **Facilities:** All major oil fields, refineries (e.g., Abadan, Isfahan), petrochemical plants (e.g., Bandar Imam), and export terminals (e.g., Kharg Island) are under state control via the National Iranian Oil Company (NIOC).
- **Pipelines and Storage:** The national pipeline network and all strategic storage facilities are critical state assets. The IRGC, through Khatam al-Anbiya, has significant influence and control over the construction and security of this infrastructure.

Power Plants, Telecom Networks, Transport Hubs:

- Major power generation facilities, the national electricity grid, and the Telecommunication Company of Iran (TCI) are controlled by state-owned or IRGC-linked entities. TCI, for instance, is majority-owned by a consortium linked to Setad and the IRGC.
- Transport hubs like Imam Khomeini International Airport and the ports of Bandar Abbas and Chabahar are under state control, with the IRGC having a pervasive presence in their security and operations.

Corporate Holdings

Major Public and Private Companies:

Subsidiaries Abroad and Shell Companies:

- Numerous subsidiaries and shell companies are maintained in Europe (especially Germany), the Middle East (UAE, Turkey), and Asia for sanctions evasion, procurement of dual-use technology, and investment of surplus capital. These are often presented as legitimate, independent businesses.

Databases and Registries:

- Control over critical national databases, including the National Organization for Civil Registration, the Real Estate Registration Organization, and corporate registries. These are invaluable for identifying individuals, assets, and corporate networks.

Proprietary Technology:

- Patents and proprietary technology developed by defense-related companies (controlled by the Ministry of Defense and Armed Forces Logistics) and knowledge-based companies funded by the bonyads.

Archives:

- Vast archives containing evidence of corruption, records of the nuclear and military programs, intelligence files, and documents related to international illicit activities. These are held by various ministries, the IRGC, and bonyads, and are at high risk of immediate destruction.

Foundational Action: Identification of Key Organizations

The plan targets all major organizations controlling strategic resources.

Table 1: Key Financial and Economic Organizations

Organization Name	Description	Estimated Worth / Economic Clout	Key Sectors of Operation
Bonyad Mostazafan (Foundation of the Oppressed)	A massive parastatal conglomerate (bonyad) formed from confiscated assets of the former monarchy. Reports directly to the Supreme Leader.	Estimated at over \$20 billion. One of Iran's largest economic players.	Real Estate, Construction, Finance (Sina Bank), Manufacturing, Beverages, Logistics.
Setad Ejraiye Farmane Emam (EIKO - Execution of Imam Khomeini's Order)	A parastatal holding company controlled by the Supreme Leader, built on systematically seizing assets from religious minorities, dissidents, and Iranians abroad.	Estimated as high as \$95 billion. A secretive economic empire.	Pharmaceuticals (Barekat), Finance, Real Estate, Telecommunications, Energy.
Astan Quds Razavi	A bonyad managing the shrine of Imam Reza in Mashhad, but also a massive business conglomerate with vast land and industrial holdings. Reports to the Supreme Leader.	Estimated in the tens of billions of dollars. Dominates the economy of northeastern Iran.	Agriculture, Food Processing, Real Estate, Automotive, Financial Services.
Khatam al-Anbiya Construction HQ (KAA)	The primary engineering and construction arm of the Islamic Revolutionary Guard Corps (IRGC). Acts as a massive government contractor.	Awarded government contracts worth billions annually. Controls a significant portion of Iran's infrastructure development.	Oil & Gas, Petrochemicals, Pipelines, Dams, Roads, Telecommunications.

Organization Name	Description	Estimated Worth / Economic Clout	Key Sectors of Operation
National Iranian Oil Company (NIOC)	The state-owned enterprise under the Ministry of Petroleum responsible for all of Iran's oil and gas production and sales.	Controls assets worth hundreds of billions of dollars. The financial lifeblood of the state.	Oil & Gas Exploration, Production, Refining, Marketing.

Foundational Action: Identification of Key Individuals and Roles

This involves targeting the key personnel controlling the above organizations. The following table provides examples; a full, classified list must be developed and continuously updated.

Name	Position / Role	Organization	Connections to Assets
Parviz Fattah	Head of Setad (EIKO); Former Head of Bonyad Mostazafan	Setad (EIKO), Bonyad Mostazafan	As chief executive, has ultimate signatory and operational control over the domestic and international assets of these entities. His family members are also suspected proxies.
Hossein Dehghan	Head of Bonyad Mostazafan	Bonyad Mostazafan	Former Minister of Defense with deep ties to the IRGC. Controls the foundation's vast real estate and corporate portfolio.
Ahmad Marvi	Custodian of Astan Quds Razavi	Astan Quds Razavi	Appointed by the Supreme Leader, he controls all religious endowments and the massive business empire attached to the shrine.

Name	Position / Role	Organization	Connections to Assets
Abdolali Ali-Asgari	CEO of Tadbir Group (Setad's primary holding company)	Setad (EIKO)	Manages the day-to-day operations of Setad's corporate empire and its network of subsidiaries.
Saeed Mohammad	Former Commander of Khatam al-Anbiya HQ	Khatam al-Anbiya (KAA)	Oversaw the IRGC's massive construction and infrastructure projects, likely with access to associated slush funds and front companies.
Family members of Senior Officials (e.g., Khamenei, Larijani families)	Proxies, beneficial owners	Various	Used as proxies to hold assets, particularly real estate and corporate shares, both in Iran and abroad (e.g., Canada, Germany) to circumvent sanctions and obscure ownership.

Preliminary Action: Vulnerability Assessment

This assessment identifies the primary risks to the assets during a period of instability.

- **Risk of Looting:** High risk of widespread looting of physical assets, particularly from the offices of bonyads and the residences of regime officials, by a population impoverished and angered by decades of corruption. This can lead to the loss of not only material wealth but also critical documents and records.
- **Risk of Sabotage:** High risk of deliberate sabotage by regime loyalists, especially within the IRGC. This includes the destruction of critical infrastructure (oil pipelines, power plants), the erasure of digital databases, and the burning of archives to cripple the incoming transitional authority and conceal evidence of past crimes.
- **Risk of Illicit Transfer:** The highest and most immediate risk. In a crisis, regime insiders will immediately attempt to transfer liquid assets (electronic funds, cryptocurrency) to pre-established offshore accounts. They will also attempt to smuggle out high-value physical assets like gold, cash, and

bearer bonds. Known incidents of asset flight occurred during the 1979 revolution and have continued through systematic sanctions evasion schemes.

- **Risk of Personnel Defection (with Assets):** A significant risk involves key personnel (e.g., bank managers, IT administrators, corporate officers) who possess the knowledge and access codes to control assets. While some may cooperate, others may flee the country, taking their knowledge with them or using it to "ransom" assets for personal gain.

Sequenced Recovery Measures

This section outlines the sequenced operational measures for the recovery plan.

Phase 1: Immediate Measures (H-0 to H+72)

This phase is focused on securing assets and preventing immediate loss.

- **Immediate Securing of Physical Locations:**
 - o **Objective:** To establish a physical cordon around all critical economic and administrative centers to prevent looting, sabotage, and the removal of documents or assets.
 - o **Target List (Priority 1):**
 1. Central Bank of Iran (Tehran) - Main building and treasury vaults.
 2. Bonyad Mostazafan Headquarters (Tehran).
 3. Setad (EIKO) Headquarters (Tehran).
 4. National Iranian Oil Company (NIOC) Headquarters (Tehran).
 5. Major State Bank Headquarters (Bank Melli, Saderat).
 6. Key Data Centers for civil registration and financial networks.
 - o **Execution:**
 - Deploy pre-designated units of the regular military (Artesh) or coalition forces with clear rules of engagement.
 - Establish a multi-layered security perimeter. The inner layer secures all entrances and exits, while the outer layer manages public access and prevents crowds from forming.

- Simultaneously, "inside teams" composed of vetted technocrats and security personnel will enter the facilities to secure server rooms, file archives, and executive offices. All personnel will be prevented from leaving until cleared.
- **Digital Asset Backup and Forensic Preservation:**
 - IT teams will immediately begin creating forensic images of all critical servers and databases.
 - Network access to the outside world will be severed to prevent remote wiping of data.
 - All available digital records will be preserved as evidence for future legal action.
- **Legal Orders and International Notifications:**
 - The transitional authority will issue an immediate emergency decree freezing all accounts associated with the targeted organizations and individuals within the Iranian banking system.
 - Simultaneously, pre-drafted notifications will be sent via the most rapid diplomatic channels to the Financial Action Task Force (FATF), Interpol (Red Notices for key individuals), the World Bank StAR Initiative, and the governments of all jurisdictions known to hold Iranian assets, requesting an immediate freeze on all related accounts and properties.

Phase 2: Mid-Term Measures (Days +3 to +30)

- **Establishment of the Asset Recovery Task Force:** Formalize the creation of a dedicated task force with sub-committees for forensic accounting, legal affairs, international diplomacy, and physical security.
- **Forensic Audits:** Begin a full-scale forensic audit of the secured institutions to map out the full extent of their holdings, identify illicit transactions, and trace the flow of funds.
- **Whistleblower Program:** Launch a public campaign encouraging insiders to provide information on hidden assets, offering financial rewards and amnesty where appropriate.

Phase 3: Long-Term Measures (Month 2 Onwards)

- **International Legal Action:** Initiate legal proceedings in foreign jurisdictions to recover frozen assets. This will involve hiring international law firms and working closely with the justice departments of partner nations.

- **Asset Management and Disposition:** Develop a transparent framework for managing the recovered assets. This may include creating a national wealth fund to use the assets for reconstruction and social programs.
- **Prosecutions:** Use the preserved evidence to initiate domestic prosecutions of individuals involved in corruption and the theft of public wealth.

9.5. Recommendations

These are advisory suggestions that provide strategic direction for the operation.

- **Recommendation 1:** Establish a Unified Command Structure: Create a single, unified Asset Recovery Task Force, reporting directly to the head of the transitional authority. This task force must be empowered with executive, legal, and operational authority to act decisively and cut through any bureaucratic red tape.
- **Recommendation 2:** Develop and Implement a Proactive Public Communication Strategy:
 - o **Objective:** To build domestic and international legitimacy, prevent panic, and counter disinformation.
 - o **Key Messages:** Emphasize that the operation is targeting stolen "public wealth," not private property. Regularly communicate progress and highlight how recovered funds will be used to benefit the people (e.g., restoring pensions, funding hospitals, public transport, ...).
 - o **Channels:** Use all available media to disseminate information. Establish a dedicated website to serve as the official source of information, providing updates and debunking false rumors.
- **Recommendation 3:** Leverage Diaspora Expertise and International Cooperation:
 - o **Diaspora Expertise:** Actively recruit and vet experts from the Iranian diaspora with experience in international finance, forensic accounting, and law. Create a formal advisory council to assist the task force.
 - o **International Cooperation:** Formalize partnerships with international bodies like the World Bank/UNODC Stolen Asset Recovery (StAR) Initiative, FATF, and Interpol. These organizations can provide technical assistance, training, and a global platform for coordinating legal and diplomatic efforts.

9.6. Expected Outcomes

These are the clearly defined results that stem from the successful execution of the plan's actions.

- **Outcome 1:** The successful prevention of large-scale asset flight and the physical and digital securing of the majority of the former regime's domestic economic infrastructure within the first 72 hours.
- **Outcome 2:** The legal freezing of a significant portion (estimated in the tens of billions of dollars) of the regime's offshore assets within the first month.
- **Outcome 3:** The preservation of critical evidence needed to support future domestic and international legal proceedings against corrupt officials.
- **Outcome 4:** Increased public trust and confidence in the transitional authority, demonstrated by its decisive action to reclaim national wealth and hold the former regime accountable.

9.7. Monitoring and Evaluation

This section outlines the metrics and processes to track progress and ensure accountability.

Metrics for Success:

- Financial:
 - o Total dollar value of domestic bank accounts frozen.
 - o Total estimated value of international assets frozen.
 - o The quantity of physical gold and cash secured from vaults.
- Operational:
 - o Number of high-priority physical sites successfully secured.
 - o Percentage of critical databases forensically imaged and preserved.
 - o Number of Interpol Red Notices issued and acted upon.
- Legal:
 - o Number of formal asset recovery cases filed in foreign jurisdictions.

- o Number of domestic indictments prepared based on recovered evidence.

Review Process:

- The Asset Recovery Task Force command will hold daily operational briefings for the first 14 days.
- A weekly progress report will be submitted to the leadership of the transitional authority.
- A monthly public report will be issued via the official website to maintain transparency and public support, outlining the total value of assets secured and the progress of recovery efforts.

10. Energy

Objective:

This Emergency Phase plan outlines a strategic approach for stabilizing, restoring, and reforming Iran's critical oil, gas, electricity, and nuclear infrastructure over the first 180 days following the fall of the Islamic Republic. Designed to be implemented by a vetted Transitional Energy Command Unit (TECU), the plan integrates security, governance, technical, and geopolitical risk management elements across multiple phases.

The core objectives are:

1. Prevent sabotage, chaos, and operational collapse in the energy sector.
2. Restore and secure domestic electricity and fuel flows across all provinces.
3. Resume export operations to generate revenue for national recovery and ensure international confidence in Persian Gulf energy stability.
4. Establish the foundation for long-term institutional transition, regulatory reform, and public trust through transparency and phased handover to a restructured Ministry of Energy (MOE).

Key Priorities:

1. **Establish Transitional Energy Command Unit (TECU):** Centralize control of energy institutions under a vetted and secure operational body to manage the entire emergency phase.
2. **Secure and lock down physical and digital control systems:** Rapidly isolate SCADA, dispatch, and fuel infrastructure networks to prevent sabotage or hostile takeover.
3. **Stabilize domestic electricity and fuel flows:** Prioritize hospitals, water systems, and critical urban infrastructure; initiate modular power and voucher-based reforms as stopgaps.
4. **Reintegrate and restructure the energy workforce:** Vet and redeploy mid-level technical staff while launching diaspora reintegration to restore institutional capacity.
5. **Transition from TECU to Ministry of Energy (MOE):** Merge MoP and MoE into a unified structure with clear regulatory, operational, and innovation divisions by the end of Phase 5.

6. **Begin infrastructure upgrades and legal reforms:** Launch upgrades to aging refineries and power plants to improve fuel quality, reduce blackouts, and restore safe operations. Simultaneously, establish a legal review body to evaluate and renegotiate regime-era energy contracts to align with international norms.
7. **Reframe nuclear oversight under civilian and international norms:** Suspend operations, secure materials, initiate inspections, and conduct contamination and storage safety audits.
8. **Build international investor and institutional trust:** Coordinate observer access, release reform roadmaps, and launch the Iran Energy Dialogue Forum.

Assumptions:

1. Basic security and territorial control have been achieved in most energy-producing regions
2. International technical and financial support is available
3. Regime-aligned actors in the IRGC, Basij, and Harasat can be neutralized quickly
4. Mid-level engineers and technicians are willing to cooperate with TECU
5. Targeted sanctions relief is expected to begin within the first 90 days through diplomatic channels.

Phase 0: Pre-Entry Coordination (Before Day 1)

- **Form Transitional Energy Command Unit (TECU):** A high-trust command body composed of experts in oil & gas, electricity, cybersecurity, strategic planning, and economic stabilization. TECU will serve as the central node for all planning, operations, and policy control. Establish a tiered field structure under TECU, including Regional Command Units (RCUs) to coordinate implementation at the provincial level, ensure rapid deployment, and manage site-specific operations.
- **Legal empowerment:** A formal, written, and signed directive from Crown Prince Reza Pahlavi authorizes TECU to assume immediate executive control of energy institutions post-regime.
- **Identify and vet internal technocrats and Engineers:** Extensive mapping down to 4th-rank technocrats within the Ministry of Petroleum (MoP) and the Ministry of Energy (MoE); Using intelligence and insider inputs, flag regime-linked or IRGC-aligned personnel for dismissal while quietly identifying competent, apolitical personnel suitable for retention under TECU supervision.

- **Develop critical asset maps and SOPs:** Prepare pre-written operational procedures for refinery lockdowns, SCADA isolation, personnel dismissal, and site transition protocols.
- **Secure logistics and communications:** Set up hardened, encrypted comms (satellite, ground-based) for TECU and rapid-deployment teams. Establish staging points in neighboring countries.
- **Create International Coordination Unit (ICU):** ICU will liaise with U.S. Dept. of Energy, EU external action services, Persian Gulf energy ministries, IEA, OPEC, IMF, World Bank, and others to coordinate technical aid, fuel stabilization, and international credibility.
- **Conduct strategic volumetric analysis of national refining capacity:** Prepare a full assessment of Iran's petroleum refining infrastructure to determine real-time operational output versus nominal rated capacity, with emphasis on gasoline, diesel, and jet fuel.
 - o Identify and map supply–demand gaps across urban, military, and critical services.
 - o Evaluate the technical and operational feasibility of restoring or maximizing the domestic supply within 30 days of transition.
 - o Shortlist external procurement options from regional allies to bridge anticipated shortfalls during the stabilization phase.

Phase 1: Emergency Seizure & Lockdown (Days 1–10)

- Immediately dismiss/detain 1st–4th ranks at MoP and MoE headquarters. Orders executed with military escort under TECU directive. Frozen access to payroll, bank accounts, and control systems. Wherever operationally necessary, temporary freeze-in-place orders may be used to retain technical continuity at critical sites for 48–72 hours, while full vetting is completed. This is a stopgap only—most senior ranks are IRGC-affiliated and will not be retained.
- Seize and isolate all Harasat units embedded within energy institutions. Disarm and detain personnel; confiscate surveillance hardware and encrypted archives. Issue blackout on any further internal intel reporting chains.
- **Lock down SCADA and digital control systems:** Change all root access credentials. Isolate networks from external servers. Manual fallback protocols initiated where automation is compromised.
- **Activate Civil-Military Coordination Protocol:** TECU and security forces coordinate on securing physical energy infrastructure, enforcing curfews, and protecting returning personnel.

- **Launch Energy Financial Stability:** Begin immediate freeze and audit of regime-linked energy export accounts, domestic subsidies, and sovereign fund diversions.
- Establish a pattern of regular communication (for example: daily morning briefing and update) between a designated subcommittee of the TECU and managerial/technical leadership of the oil, gas, and energy assets around the country.

Phase 2: Stabilization & Triage (Days 11–40)

- **Conduct national technical audit:** Initiate a multi-disciplinary audit of all energy facilities, including damage reports, capacity status, personnel loyalty assessment, and infrastructure integrity checks.
- **Restore priority energy flows:** Reestablish electricity and fuel delivery to all provinces. Prioritize hospitals, water systems, and urban centers. Initiate public messaging campaigns to explain fuel pricing realities and prepare for subsidy reform. Launch targeted pilot programs using smart fuel vouchers in selected urban areas to manage consumption and protect vulnerable households.
- **Begin cautious restaffing via vetted mid-level engineers, specialists and staff.** All appointments are subject to Emergency Vetting Commission protocols.
- **Import mobile power generation units:** Lease or purchase modular gas turbine units and emergency fuel depots from regional allies to plug temporary supply gaps.
- **Suspend and review existing contracts:** Freeze all active oil/gas contracts and supplier agreements initiated in the last five years. Begin legality review under transitional legal framework.
- **Launch Environmental & Safety Rapid Response Team** to handle immediate environmental hazards and facility safety risks.

Phase 3: Operational Continuity & Trust Building (Days 41–100)

- **Establish Institutional Security Units:** Dismantle Harasat presence and replace with neutral security arms accountable to TECU and a forthcoming civilian oversight authority.
- **Launch public transparency dashboard:** Publish daily updates on fuel output, refinery capacity, blackout zones, and audit summaries to rebuild public trust and reduce misinformation.
- **Begin structural bundling pilots:** Initiate pilot programs to structurally redefine MoP and MoE.

- **Initiate Whistleblower & Loyalty Programs** to encourage employee cooperation and retain critical expertise.
- **Coordinate international observer access:** Facilitate entry for IEA, IAEA, World Bank, and insurers to verify control, enhance global confidence, and support external credit flows.
- **Initiate Judicial and Regulatory Reform Taskforce** for transparent governance, compliance, and international alignment.
- **Initiate Post-Regime Nuclear Energy Evaluation Taskforce:** Establish a specialized technical and legal taskforce under TECU oversight to assess the future of nuclear energy in Iran in alignment with national needs and international expectations.
 - Coordinate with the IAEA to facilitate full inspections and monitoring of nuclear facilities, including Natanz, Fordow, and Isfahan sites.
 - Reassess the operational safety and strategic value of the Bushehr Nuclear Power Plant in coordination with international safety standards.
 - Suspend all nuclear activities indefinitely, pending national strategic review and international consultation.
 - Engage regional and global stakeholders to transparently evaluate whether nuclear energy serves Iran's future energy mix, or if alternate strategies (renewables) provide better outcomes.
 - Secure and safeguard nuclear materials under international supervision to prevent leakage, theft, or misuse during the transition.
 - Conduct air, soil, and groundwater contamination testing within a 50–100 km radius of major enrichment and suspected storage sites to assess environmental and public health risks. Initiate coordination with IAEA to explore secure dry cask storage and interim containment strategies for any exposed nuclear materials or reactor waste, particularly at Bushehr and Isfahan.
 - Investigate the handling, movement, and storage protocols of enriched uranium, particularly in the final years of the regime, to determine whether international safety standards were followed and to identify any additional testing or remediation needs.

Phase 4: Transition & Institutional Transfer (Days 101–130)

Following the initial 100-day stabilization period, the focus shifts toward formal institutional restructuring, workforce stabilization, and laying the groundwork for national reform. This phase marks the strategic handoff of operational control from the Transitional Energy Command Unit (TECU) to the newly created Ministry of Energy (MOE).

The transition is phased to preserve continuity, minimize operational risk, and avoid political or bureaucratic bottlenecks.

- **Stage the merger of MoP and MoE into MOE:** Launch the legal and administrative merger in two phases. Phase 1 includes establishing a joint coordination office with shared governance; Phase 2 (within 60 days) activates full operational divisions: Oil & Gas, Electricity, Renewables & Nuclear, and Strategic Planning & Regulation.
- **Appoint interim leadership:** Identify leadership from a pool of vetted local technocrats and diaspora experts. Assign co-lead roles with local professionals to avoid integration backlash. TECU retains oversight during the transition.
- **Finalize refinery audits and initiate upgrades:** Complete detailed audits of national refineries. Begin modernization of refineries at key sites to reduce pollution, improve fuel quality, and meet international safety and efficiency standards.
- **Operationalize diaspora reintegration taskforce:** Define selection criteria, secure short-term housing and salaries, and initiate the first cohort of diaspora engineers, economists, and planners. Pair each with local counterparts.
- **Cyber-physical system transfer:** Transition SCADA and cybersecurity control to MOE regional command centers under a phased access model. Introduce zero-trust protocols and retain TECU as a cybersecurity backstop.

Phase 5: Infrastructure Rehabilitation & Legal Reset (Days 131–160)

This phase initiates infrastructure upgrades and regulatory reboot. Activities shift toward modernization of core assets, pilot renewables, contract reform, and environmental recovery, setting the tone for a credible and rules-based energy sector.

- **Prepare grid stabilization pilots:** Focus on reinforcing transmission reliability and reducing diesel dependence in critical provinces. Begin site selection for potential future clean energy pilots after Phase 6.
- **Thermal plant retrofitting:** Start phased upgrades at older gas-fired plants to improve efficiency and load-following. Use feasibility assessments from Phase 4 to guide contractor mobilization.
- **Grid reinforcement (staged):** Begin route studies, right-of-way security assessments, and procurement processes for the national 500kV transmission backbone. Physical construction begins in late Phase 6 or Year 2.
- **Contract Review Tribunal:** Stand up an independent body with legal experts and international observers to review and renegotiate regime-era energy contracts. Establish fast-track dispute resolution and investor protection principles.
- **Strategic Petroleum Reserve (SPR):** Finalize site selections and secure funding commitments. Begin earthworks and fuel logistics planning; physical construction follows donor agreement.
- **Anti-corruption and integrity programs:** Launch MOE's internal oversight office.
- **Environmental remediation scale-up:** Expand testing and cleanup around nuclear, petrochemical, and enrichment sites.

Phase 6: Economic Opening & Regulatory Alignment (Days 161–180)

This final transition phase focuses on legal and market readiness to reintroduce Iran as a credible energy actor in the international system. Regulatory structures are piloted, investment groundwork is laid, and the energy governance model is made public.

- **Draft Emergency Energy Charter:** Release an interim charter outlining rules on market access, regulatory independence, and emissions targets. The Full Energy Act will be developed over 12 months through consultative processes.
- **Stand up Independent Energy Regulatory Authority:** Empower a provisional body to issue interim tariffs, oversee grid pilots, and ensure non-discriminatory access. Staffed with vetted experts and supported by international advisors.

- **Electricity pilot market (staged):** Launch limited demand response and time-of-use simulations for government and commercial users. Begin national AMI (Advanced Metering Infrastructure) roadmap development.
- **Iran Energy Dialogue Forum:** Reframe the summit as a platform for transparency and engagement. Share technical audit results, outline investment pathways, and solicit feedback. Avoid premature capital solicitation.
- **Revise and Publish National Energy Reform Roadmap:** Release a 2-year action plan covering reforms, incentives, budget allocations, and market transition steps.
- **Launch MOE Emergency Innovation Unit:** Create a rapid-response innovation team to support near-term recovery challenges—such as leak detection, grid repair analytics, and dispatch optimization—through applied technologies and diaspora talent.

Recommendations

- **Establish a standing Energy Emergency Council reporting directly to national leadership:** A high-level council—composed of TECU leadership, select MOE transition officers, and national security advisors—should be created to ensure fast decision-making, resource prioritization, and deconfliction across sectors (e.g., energy, defense, finance, environment).
- **Formalize international technical and financial partnerships within the first 60 days:** Engage and sign working agreements with the international agencies and institutes, and regional allies to secure emergency credit lines, technical assistance, and external validation of Iran’s energy recovery efforts.
- **Prepare early legal architecture for a future transparent energy sector:** Begin drafting the foundational legal instruments—such as an Energy Reform Act and Independent Regulator Charter—to shape the long-term energy market. These efforts will help attract credible investment and assure the public of fair governance.
- **Launch a national public education campaign on energy realities and reform:** To maintain public trust and prevent unrest, a targeted media campaign should inform citizens about the state of the energy system, subsidy transitions, and the long-term benefits of reform. Messaging must be transparent, consistent, and apolitical.
- **Prioritize coordinated energy diplomacy for targeted sanctions relief:** Within the first 90 days, launch a coordinated diplomatic effort—centered on transparent energy sector reform and nuclear

cooperation—to unlock targeted sanctions relief. This should focus initially on unfreezing energy revenues held abroad, securing humanitarian energy exemptions, and facilitating technical trade essential for infrastructure recovery.

Expected Outcomes

- **Operational continuity of energy supply across Iran:** Restoration of electricity and fuel flows to all provinces, with priority to hospitals, water systems, and critical services.
- **Secured control of energy institutions:** Full seizure of physical and digital infrastructure, including SCADA systems, oil terminals, and power plants, with IRGC-linked personnel removed.
- **Revenue generation from stabilized exports:** Restart of export operations from key terminals and refineries, securing short-term revenue for national stabilization and international credibility.
- **Public confidence in transitional governance:** Daily communications, visible energy improvements, and the dismantling of regime-linked security forces build legitimacy and national trust.
- **Institutional foundation for reform:** Merged and restructured Ministry of Energy (MOE) prepared to take over from TECU, with legal review mechanisms, staffing plans, and infrastructure upgrades in motion.

Monitoring & Evaluation

Metrics for Success:

- **Electricity and Fuel Flow Restoration:** Daily megawatt output and provincial fuel supply benchmarks, with 70% baseline service restoration targeted by Day 45.
- **Personnel Vetting and Replacement:** Percentage of critical posts refilled through Emergency Vetting Commission, with biweekly reports on staffing gaps.
- **Infrastructure Recovery:** Facility-level audit dashboards tracking functional recovery, outages, and technical upgrade status.
- **SCADA and Cybersecurity Hardening:** Network integrity reports confirming full root access control and elimination of foreign-linked vulnerabilities.
- **Public Trust and Stability:** Monitoring public sentiment via hotline volume, social media trends, and crowd-size data in key regions. Tracking participation in fuel voucher pilots and feedback loops.
- **Diaspora Integration Metrics:** Number of returnees onboarded, assigned, and retained within the TECU and MOE system.

Review Process:

- Daily Situation Reports compiled by TECU regional command centers and aggregated at HQ.
- Weekly National Energy Briefings shared with the Crown Prince's Transitional Authority and international liaisons.
- Monthly Independent Oversight Summaries to be released publicly, covering restoration, safety, and staffing KPIs.

Anticipated Political Challenges

Challenge 1: Resistance from entrenched regime-linked personnel at the provincial level

Many mid- and upper-level energy officials have personal or financial ties to the Islamic Revolutionary Guard Corps (IRGC). Removing them may trigger local sabotage or bureaucratic delays.

→ **Mitigation:** Immediate dismissal of top two ranks with simultaneous deployment of TECU-trained replacements backed by visible enforcement units.

Challenge 2: Populist backlash against international coordination or diaspora leadership

Anti-reform factions may frame the return of diaspora experts or coordination with international agencies as foreign interference, aiming to delegitimize transitional leadership and inflame nationalist sentiment.

→ **Mitigation:** Emphasize national ownership of reforms, with diaspora leadership framed as patriotic service. Appoint vetted local experts to key positions alongside diaspora professionals to ensure continuity and trust. Maintain transparency in selection processes, publicize stories of successful cooperation, and use targeted media campaigns to counter regime narratives and promote unity.

Challenge 3: Sabotage and espionage during early SCADA or facility handovers

IRGC remnants may exploit digital or physical access points to sabotage key infrastructure during the transition window.

→ **Mitigation:** Isolate all SCADA systems on Day 1, purge foreign-linked VPNs, and deploy plainclothes counter-sabotage units with rapid intervention authority.

Challenge 4: Opposition to transparency and audit-driven accountability

Regime beneficiaries and corrupt actors may obstruct or discredit TECU's transparency efforts (e.g., public dashboards, contract reviews).

→ **Mitigation:** Tie transparency to national dignity and recovery. Empower public watchdog groups and international observers to amplify legitimacy.

Challenge 5: Delayed international financial support

Uncertainty over legal recognition or geopolitical risk may slow the release of frozen assets or emergency credit.

→ **Mitigation:** Coordinate early with international partners. Secure pre-drafted credit instruments and public commitments during pre-entry (Phase 0).

11. Industry

Emergency Phase Transition Plan (Days 0–180): Industry, Production, and Economic Infrastructure

Objective:

This Emergency Phase plan provides a national strategy for restoring industrial output, securing critical supply chains, and laying the groundwork for long-term manufacturing and export-led growth in the aftermath of regime collapse. It prioritizes security, workforce stabilization, infrastructure continuity, and governance reform across Iran's core and enabling industries.

The plan will be coordinated by a Transitional Industrial Recovery Authority (TIRA) operating in collaboration with local technical teams, international advisors, and vetted diaspora professionals.

The plan covers three functional layers:

- **Tier 1:** Immediate recovery and protection of vital production systems (food, health, defense-related manufacturing)
- **Tier 2:** Stabilization and restart of foundational sectors with economic and employment impact (construction materials, automotive, mining)

- **Tier 3:** Coordination and planning for high-tech and value-added sectors to enter full recovery in Phase 2 (post-180 days)

Key Priorities

1. **Establish Transitional Industrial Recovery Authority (TIRA):** Central body with oversight over all industrial sites, manufacturing zones, and nationalized economic infrastructure.
2. **Secure and assess Tier 1 industries (Food, Pharma, Agro):** Ensure continuity of food production, distribution, medical supply chains, and fertilizer access within 2 weeks.
3. **Conduct national industrial asset census:** Map and assess industrial parks, refineries, plants, and major Small and Medium-sized Enterprises zones. Identify sabotage, looting risks, and restart potential.
4. **Launch Industrial Workforce Stabilization Plan:** Vet and rehire skilled workers, engineers, plant managers, and factory operators; prevent black market diversion.
5. **Restore electricity and water to Tier 1 and Tier 2 clusters:** Coordinate with TECU and municipalities to prioritize high-employment and food/pharma-linked industrial zones.
6. **Initiate legal reform and inventory cleanup:** Freeze regime-linked industrial assets. Launch review of IRGC-controlled factories, state holdings, and monopoly abuse.
7. **Create Emergency Import Facilitation Framework:** Work with international partners to ensure the import of critical inputs: active pharmaceutical ingredients, wheat, medical supplies, fertilizer, machine parts, and clean packaging materials.
8. **Stand up Supply Chain Risk Control Unit:** Monitor bottlenecks, hoarding, and sabotage risks across transportation, agro-logistics, and industrial inputs.
9. **Prepare Transitional Industrial Law:** Set legal foundation for factory property rights, temporary nationalization, dispute resolution, and re-privatization roadmap.

Assumptions

- Territorial and energy security are largely stabilized (per TECU Phase 1–2 completion).
- Domestic fuel and electricity flows are resuming in 70%+ of provinces.
- The transitional authority has initial public legitimacy and international recognition.

- IRGC and Bonyad-linked industrial assets have been partially frozen or secured.
- Short-term import credit lines or barter arrangements are available with neighboring countries and Western allies.

Phase 0: Pre-Entry Coordination (Before Day 1)

- **Form the Transitional Industrial Recovery Authority (TIRA)** under the directive of Crown Prince Reza Pahlavi.
- **Develop Tiered Industrial Prioritization Map:** Classify industrial clusters into Tier 1, 2, and 3.
- **Create Emergency Supply Chain Surveillance System:** Map the movement of wheat, APIs, medical goods, and other essentials.
- **Coordinate with TECU and Emergency Water Unit** to ensure industrial cluster readiness for phased energy restoration.
- **Coordinate with international partners for rapid import of essential items** and bridge inventory (medicines, food inputs, seeds, agricultural chemicals, etc.)

Phase 1: Emergency Seizure & Lockdown (Days 1–10)

- Seize and secure major production facilities previously operated by IRGC-linked foundations (Khatam al-Anbia, Bonyad-e Mostazafan, EIKO). Detain or suspend senior leadership and replace with vetted local professionals.
- Protect Tier 1 facilities (wheat mills, dairy, pharma plants, poultry feed processors) with military security and local workforce support.
- Deploy Rapid Inventory & Capacity Teams to assess functionality of core agro-processing and pharmaceutical lines.
- Seize and safeguard customs warehouses, industrial input depots, and black-market medical storage.
- Ban the export of critical health and food items until national stabilization.

Phase 2: Stabilization & Triage (Days 11–40)

- **Restore and restart Tier 1 production lines:** flour, rice packaging, edible oil, dairy, vaccines, insulin, IV fluids, antibiotics, poultry and cattle feed, seed processing, etc.
- **Stabilize critical packaging sectors (plastic, aluminum, cardboard)** to prevent bottlenecks in food/pharma delivery.
- **Begin plant-level audits for Tier 2 sectors:** cement, steel, construction materials, auto parts, fertilizer.
- **Launch Emergency Workforce Retention Scheme:** temporary wage support for returning skilled labor in Tier 1–2 industries.
- **Initiate national machine tool registry and reactivation program:** map CNC, extruders, injection molders, kilns, and packaging equipment that can be restarted.

Phase 3: Industrial Continuity & Public Confidence (Days 41–100)

- **Activate National Industrial Dashboard:** daily and weekly production stats for critical goods.
- **Launch Pharmaceutical GMP Compliance Unit** in partnership with WHO or EMA technical advisors to accelerate restoration of trust in medicine quality and safety.
- **Finalize emergency tenders** for parts, seeds, and chemicals to fill production gaps.
- **Stand up the Public Procurement Review Board** to prevent price manipulation, political favoritism, or crony contracts.
- **Expand diaspora deployment** to pharma, agro-processing, construction material, and logistics clusters.
- **Begin rebranding and sanitation of products** previously branded under regime labels (medicines, fertilizers, food staples).

Phase 4: Institutional Activation (Days 101–130)

- **Launch the Transitional Ministry of Industry, Trade, and Production:** Merge regime-era ministries (Industry, Mines), Bonyads, and key holding companies into a single interim structure focused on industrial stabilization, legal reform, and reactivation.

- **Initiate National Industrial Re-Registration:** Place all public, private, and semi-public (IRGC-linked) firms under transitional legal protection. Begin asset verification and provisional licensing under the Emergency Privatization Transition Board.
- **Expand Tier 2 Activation:** Reopen cement, copper, urea fertilizer, auto parts, and ICT assembly clusters based on audit status and energy availability. Prioritize job preservation and key inputs for broader recovery.
- **Activate National Strategic Industries Taskforce:** Convene vetted local and diaspora experts to define reindustrialization pathways for priority sectors — automotive, petrochemicals, mining, defense, and ICT.

Phase 5: Regulatory & Legal Reset (Days 131–160)

- **Launch Transitional Industrial Courts:** Begin legal proceedings on property disputes, monopoly dissolution, and worker reinstatement. Ensure transparency and judicial integrity.
- **Issue the Industrial Compliance Blueprint:** Publish interim standards covering emissions, water use, safety, labor rights, and anti-corruption, aligned with IPP principles and export market requirements.
- **Expand Coordination with TECU and Energy Teams:** Integrate industrial recovery plans with fiscal stabilization and utility access across major clusters.
- **Deploy Industrial Watchdog Units:** Field teams to monitor implementation, prevent sabotage or re-monopolization, and collect feedback from industrial stakeholders.

Phase 6: Investment Readiness & Transition Completion (Days 161–180)

- **Publish the Clean Industry Investment Registry:** Launch a transparent, publicly accessible list of restructured industrial assets, such as manufacturing plants, processing units or infrastructure, with legal status, compliance level, and investment-readiness tags.
- **Draft Emergency Industry Investment Law Package:** Propose reforms on bankruptcy, joint ventures, foreign direct investment, labor protections, and post-conflict privatization pathways.
- **Consolidate the 2-Year Modernization Roadmap (placeholder):** Finalize internal draft integrating energy access, skilled labor pipeline, small and medium enterprises development, export targeting, and industrial resilience. Public release scheduled after Day 180.

Recommendations

- **Establish National Industrial Emergency Council chaired by the Crown Prince's delegate:** This council will include representatives from the Transitional Industrial Recovery Authority (TIRA), the interim leadership of the Ministry of Industry, Trade, and Production (MITP), the Transitional Energy Coordination Unit (TECU), and designated international observers.
- **Prioritize Tier 1 continuity in public messaging:** Daily updates, press briefings, and transparency to counter rumors, corruption, or regime counter-narratives.
- Pre-approve import corridors for agro and health inputs under humanitarian protocols.
- Publish a rebranding campaign to distinguish clean, post-regime production from corrupt legacy brands.

Expected Outcomes

- No disruption in staple food, medicine, or supplies.
- Visible economic activity in urban and rural production zones within 30–45 days.
- Growing public trust in transitional governance through transparency and stabilization.
- Partial activation of heavy industry, construction materials, and agro-processing by Day 90.
- Legal and institutional groundwork laid for full industrial revival in Years 1–2.

Monitoring & Evaluation

Metrics for Success:

Industrial Output Recovery:

- % of production capacity restored by Tier 1 and Tier 2 sectors
- Number of active industrial sites re-licensed and re-operational under provisional permits

Workforce Continuity & Confidence:

- % of skilled workforce reactivated and retained in critical facilities
- Number of retraining and co-leadership initiatives launched with diaspora professionals

Export & Logistics Reactivation:

- Export volume of key goods vs. baseline pre-collapse figures
- The number of cross-border logistics corridors stabilized and was monitored

Governance & Transparency:

- Number of privatization audits completed
- Volume of recovered industrial assets from IRGC-linked entities
- Registry entries in the Clean Industry Investment Portal

Public Engagement & Communication:

- Number of town halls, stakeholder roundtables, and local-diaspora coordination sessions

Review Process:

- Biweekly reporting to the Crown Prince's Transitional Council
- Public performance dashboards are updated at 30, 90, and 150 days to build public trust
- External technical audits at Days 60 and 180, conducted by international observers
- Feedback from industrial unions, integrated quarterly into revised policies

Anticipated Political Challenges

Challenge 1: Resistance from IRGC-linked industrial monopolies

- **Risk:** Efforts to audit, freeze, or privatize regime-linked conglomerates (e.g., Khatam al-Anbiya) may trigger obstruction or covert sabotage.
- **Mitigation:** Legal asset freeze orders, visible international support for clean privatization, and security deployments at sensitive plants.

Challenge 2: Public backlash over privatization or diaspora involvement

- **Risk:** Populist actors may frame privatization as foreign theft or diaspora co-leadership as elitist favoritism.
- **Mitigation:** Public communication campaigns emphasizing national ownership, jobs, and public benefit; pair diaspora with domestic counterparts; prioritize transparency.

Challenge 3: Smuggling, looting, or illicit markets during transition

- **Risk:** As legal systems reset, illicit trade in fuel, steel, and medicines may rise.
- **Mitigation:** Customs task force under ISTF with border coordination; fast-track industrial zoning, police presence; tech-enabled tracking.

Challenge 4: Skilled flight or brain drain continues

- **Risk:** Remaining experts may emigrate due to uncertainty, hampering restarts.
- **Mitigation:** Offer 12-month transitional retention contracts; coordinate with the Ministry of Labor and Education to reskill and stabilize.

Challenge 5: Legal uncertainty delays private investment

- **Risk:** Absence of commercial court reform, bankruptcy laws, or JV frameworks may deter diaspora and FDI capital.
- **Mitigation:** Draft temporary legal guarantees under MITP with transitional parliamentary oversight; publish timelines for full regulatory reset.

Challenge 6: Bureaucratic inertia from former regime-affiliated managers

- **Risk:** Some mid-level administrators may slow implementation or sabotage reforms.
- **Mitigation:** Use vetting and loyalty review; pair transitional leadership with local counterparts on interim contracts; rotate regional leadership as needed.

12. Environment

Overview:

This document outlines a strategic framework for environmental governance during the emergency phase of Iran's post-regime transition. It focuses on the stabilization of critical ecosystems, the restoration of core environmental governance functions, and the urgent mitigation of acute pollution threats with direct risk to public health. The plan also aims to lay the foundation for long-term reform by engaging the public, restoring institutional legitimacy, and mobilizing international cooperation. Given the acute state of water bankruptcy in Iran and its urgent implications for national stability, a dedicated "Water" section has been developed separately, while remaining closely coordinated with the environmental transitional plan.

Importance of Environmental Management

Environmental management is a pillar of national recovery and security during the post-regime transition. Decades of mismanagement, corruption, and destructive policies have pushed Iran to the brink of ecological collapse, manifesting in water scarcity, polluted air and soil, land subsidence, deforestation, wetland loss, and biodiversity decline. These systemic failures threaten public health, undermine food and water security, and weaken the social fabric of the nation. Addressing these challenges is essential not only to alleviate humanitarian risks but to restore public trust and uphold the integrity of the nation's natural heritage. Moreover, an effective path to environmental recovery can catalyze renewed engagement with the international community, opening access to technical expertise, climate and environmental funding, and regional cooperation on transboundary challenges.

Objectives

- **Objective 1: Stabilize critical ecosystems and contain environmental collapse.**

Implement emergency legal, logistical, and enforcement measures to mitigate the ongoing degradation of high-risk ecosystems, including wetlands, forests, river basins, and coastal zones.

- **Objective 2: Restore essential environmental governance functions.**

Reactivate the Department of Environment and provincial offices, preserve core technical personnel, and ensure continuity in any existing environmental monitoring, pollution control, and protected area management.

- **Objective 3: Protect public health through urgent pollution response.**

Deploy immediate interventions to address critical air and water pollution, conflict-related contamination, and hazardous waste in affected communities.

- **Objective 4: Lay the groundwork for long-term environmental governance reform.**

Initiate participatory processes to draft environmental legislation recommendations to establish integrated environmental governance mechanisms and align future policies with principles of ecological justice and sustainable development.

- **Objective 5: Rebuild international environmental cooperation.**

Re-engage with global institutions and regional partners to access technical assistance, unlock emergency funding, and coordinate responses to shared ecological threats.

Key Priorities

Priority 1: Establish emergency environmental governance and assessment capacity.

- Form the Transitional Environmental Emergency Task Force (TEETF) to assume operational oversight, coordinate response efforts, and facilitate rapid national assessments of ecological damage, pollution hotspots, and associated public health risks. TEETF will coordinate closely with TWGS on shared mandates, including water quality monitoring, groundwater oversight, and environmental impact assessments, to prevent duplication and ensure cohesive recovery planning.

Priority 2: Stabilize critical ecosystems and prevent irreversible ecological loss in high-risk areas.

- Direct emergency resources toward protecting the country's most endangered ecosystems, aiming to maintain ecological resilience and avoid long-term national and regional consequences.

Priority 3: Restore institutional functionality and preserve environmental capacity.

- Maintain the core operations of the Department of Environment and regional offices by retaining vetted technical staff and protecting monitoring infrastructure.

Priority 4: Address environmental risks to public health.

- Prioritize pollution control, access to clean water, and air quality improvements in high-risk urban and industrial areas.

Priority 5: Rebuild public trust and reestablish international cooperation.

- Initiate a national communication campaign to promote transparency and civic engagement in environmental recovery. Engage with international institutions to facilitate technical cooperation, donor engagement, and multilateral environmental diplomacy in support of environmental recovery efforts.

Assumptions

- **Assumption 1: Transitional political authority will be coherent, functional, and recognized.** A centralized and minimally stable political structure must exist to issue executive decrees, mobilize national institutions, and enforce environmental emergency measures.
- **Assumption 2: Core environmental institutions and vetted mid-level managers will remain available and willing to serve.** Environmental professionals, particularly mid-level technical staff in the Department of Environment and universities, must be present and willing to support the transition.
- **Assumption 3: International organizations will be positioned to engage rapidly and constructively.** It is assumed that key international actors, including UN agencies, regional environmental organizations, and donor institutions, will be positioned to rapidly initiate cooperation, provide technical assistance, and support financing mechanisms once a transitional framework is in place.
- **Assumption 4: The public will respond positively to transparent communication and opportunities for civic participation.** A basic level of societal cohesion and public trust is assumed to exist or be rapidly restorable, enabling effective outreach, volunteer mobilization, and local engagement in emergency environmental efforts.
- **Assumption 5: Immediate legislative and executive authority will be granted to authorize emergency measures.** The transitional government will be able to secure legal instruments to impose moratoria, declare emergency zones, and restructure institutional mandates as needed.

Actions

Phase 0 – Before Day 1

- **Assemble a Transitional Environmental Emergency Task Force (TEETF):**
Establish an inclusive core of technocrats, environmental professionals, and scientists to maintain readiness to assume control of environmental governance structures, draft immediate stabilization protocols, and identify priority ecological zones.
- **Develop a Preliminary National Ecological Triage Map:**
Using existing satellite data, NGO reports, and academic research, the TEEG will produce a triage map of Iran's most endangered ecosystems, including wetlands, forests, and biodiversity hotspots, to enable the transitional government to deploy resources selectively where collapse is imminent and recovery is still feasible.

- **Identify International Environmental Agencies for Emergency Assistance:**

Identify key international environmental agencies and regional multilateral institutions to coordinate emergency assistance when conditions allow. These agencies will be critical for deploying rapid technical missions, supplying equipment, and unlocking multilateral environmental funds immediately after regime change.

Phase 1 – Emergency Response & Stabilization (Days 1–10)

- **National Environmental Emergency:**

Issue an executive emergency decree placing key critical ecosystems under immediate legal protection. This decree empowers rapid response, halts extractive activities, and signals national prioritization of ecological survival.

- **Environmental Governance Capacity:**

Reaffirm and maintain the operational structures of the Department of Environment (DoE) and provincial environmental offices. Retain technical and mid-level staff to ensure continuity in any ongoing efforts of environmental monitoring, protected area management, and pollution control. Conduct rapid vetting to identify and suspend individuals with proven records of corruption or politically motivated environmental negligence.

- **High-Risk Activities:**

Suspend all industrial deforestation, sand mining, and hunting licenses in priority zones, and—in coordination with the Transitional Water Governance Sector (TWGS)—deep-well groundwater drilling, pending further evaluation.

- **Secure Strategic Environmental Assets:**

Deploy security and enforcement teams to protect strategic sites and prevent looting of equipment and vandalism of monitoring stations.

- **Emergency Water and Air Pollution Response:**

Support TWGS-led efforts to mobilize potable water delivery, mobile water purification units, and water tankers to high-risk urban centers and impose high-pollution emergency controls in cities facing critical smog levels.

- **Air-quality Emergency Measures:**

Institute temporary traffic restrictions in severely affected cities to reduce urban emissions. Halt the

burning of high-emission fuels in power plants and industrial boilers, particularly in areas with acute pollution episodes.

Phase 2 – Rapid Assessment & Pollution Response (Days 11–40)

- **Immediate Field Assessment:** Initiate rapid environmental field surveys of high-priority regions to generate fast-turnaround reports on ecological function, contamination, immediate needs, and restoration potential. Incorporate basic climate risk screening to identify regions facing compounding vulnerabilities due to desertification, water scarcity, or heat stress.
- **Emergency Pollution and Conflict Waste Cleanup:** Launch a rapid environmental assessment to identify health-threatening conflict and industrial pollution. Initiate emergency cleanup of pollution hotspots to prevent secondary health crises.
- **Enforce Emergency Protections for Persian Gulf Fisheries:** Halt operations of foreign trawlers and establish temporary marine protected zones using naval and local maritime enforcement, and temporarily suspend new industrial fishing licenses in coastal areas to protect depleted marine biodiversity pending further assessments.
- **Environmental Public Communication:** Launch a national public information campaign to reassure citizens about the government's commitment to urgent environmental protection. Promote transparency on environmental risks, encourage civic participation in conservation efforts, and build public trust in the transitional government's environmental response.

Phase 3 – Institutional Coordination & Reform Planning (Days 41–100)

- **Strategic Projects Assessments:** In coordination with TWGS and relevant sectoral agencies, review all major infrastructure and development projects to identify those lacking valid Environmental Impact Assessments or requiring reassessment. Conduct necessary evaluations and recommend suspension, revision, or continuation based on ecological integrity and public health considerations.
- **Regional Basin Councils:** Create six local "Water and Ecosystem Councils" in key watersheds (mirroring Iran's river basin divisions). These councils, with local authority and stakeholder representation, will manage resources locally and ensure response efforts suit regional conditions, serving as a bridge between national policy and local action.
- **Legal and Institutional Reform:** Convene a temporary commission to develop draft recommendations for modern environmental legislation. Priority areas should include formal recognition of water rights

and basin-level resource management, in coordination with TWGS, public participation mechanisms, and the integration of sustainable development principles.

- **International Partnerships and Consultation:** Develop a roadmap for long-term engagement with critical international institutions and initiate bilateral dialogues with neighboring countries on sustainable transboundary water management. Facilitate visits by international observers and experts from countries with advanced sustainability experience to assess ecological challenges and support financial and technical assistance efforts.

Phase 4 – Strategic Infrastructure, Intelligence & Accountability (Days 101–180)

- **Forest Protection:** Impose an immediate nationwide ban on commercial timber cutting in high-value forests, and ramp up ranger patrols.
- **National Environmental Intelligence Platform:** Create an open-access system to collect, analyze, and share real-time environmental data from satellites, sensors, and local reports. This platform will enhance transparency, support evidence-based policymaking, and rebuild public and international trust in environmental governance.
- **Environmental Investment Strategy Plan:** Prepare a strategic plan identifying urgent ecological restoration needs, environmental infrastructure priorities, and funding opportunities to attract international donor support, technical assistance, and diaspora contributions.
- **Environmental Truth and Accountability Commission:** Create a formal investigatory body to start documenting ecological crimes and corruption under the former regime, focusing on wetland destruction, unlawful industrial licenses, and the IRGC's role in water diversion, deforestation, and environmental damage.

Recommendations

- **Recommendation 1:** Embed environmental recovery within the broader national stabilization agenda. The environmental crisis must be addressed as a matter of national security and sovereign responsibility, linked to public health, social cohesion, and regional security. Integration with other sectors, such as infrastructure, public health, and agriculture, will be essential.
- **Recommendation 2:** Establish a fast-track coordination mechanism for implementing emergency environmental actions. To avoid institutional fragmentation and bureaucratic delays during the transition, a clearly mandated environmental coordination body should be empowered to lead and

oversee the implementation of urgent environmental stabilization measures across ministries, provinces, and technical sectors.

- **Recommendation 3:** Ensure early budgetary and political capital is allocated to environmental recovery. Initial financial resources and political bandwidth should be allocated to environmental response, not only to enable implementation, but to signal seriousness of intent to domestic and international audiences.
- **Recommendation 4:** Institutionalize data transparency and shared situational awareness. A central platform for environmental data and reporting must be operational to support coordinated action, improve decision-making, and build domestic and international trust in the transitional government's environmental stewardship.
- **Recommendation 5:** Deliver early and visible results to reinforce public trust. Target high-impact, rapidly achievable interventions that demonstrate visible impact, signal a clear break from past failures, and establish early credibility with the public. All emergency interventions should be guided by principles of environmental justice, ensuring that historically neglected communities receive equitable attention, resources, and representation in recovery planning.

Expected Outcomes

- **Outcome 1:** Emergency environmental governance activated and operational.
- **Outcome 2:** Critical ecosystems placed under legal protection, with initial stabilization underway.
- **Outcome 3:** Immediate pollution threats addressed in select high-risk areas.
- **Outcome 4:** Continuity of environmental institutions maintained, with reform planning initiated.
- **Outcome 5:** Re-engagement with international institutions and donors underway.
- **Outcome 6:** Public legitimacy strengthened through visible action and inclusion.
- **Outcome 7:** Strategic frameworks for long-term environmental transition initiated.

Monitoring and Evaluation

Metrics for Success:

- Percentage of identified high-risk ecological zones placed under emergency legal protection.

- Number of completed rapid environmental assessments.
- Scope and frequency of emergency environmental interventions, such as water provision, air quality measures, and waste clean-up operations.
- Functional continuity of national and provincial environmental institutions (measured by staffing levels, operational capacity, and service delivery).
- Number of formal engagements initiated with international environmental agencies and donors.
- Public communication reach, media coverage, and level of community participation in early civic environmental initiatives.
- Completion status of foundational documents: Environmental Intelligence Platform roadmap, investment strategy plan, and legal reform draft framework.

Review Process:

- The Transitional Environmental Emergency Task Force (TEETF) will provide monthly internal progress reports and quarterly public briefings to maintain transparency.
- An independent evaluation mechanism, composed of national experts and international observers, will validate results and ensure credibility in reporting.
- Progress data and outcomes will be made publicly accessible via open reporting platforms in line with global standards on environmental transparency and accountability.

Anticipated Political Challenges

Challenge 1: Institutional fragmentation and unclear authority during the transition.

Overlapping mandates and lack of clarity across transitional institutions may delay coordination and enforcement.

- Mitigation Strategy:

Activate the Transitional Environmental Emergency Task Force (TEETF) as the central coordinating body, working through the Department of Environment, ministries, and provincial governance structures to streamline implementation.

Challenge 2: Sociopolitical sensitivities in historically marginalized, discriminated, and ecologically distressed regions. In provinces with histories of marginalization and severe environmental degradation, where past

environmental injustice has been most acute, new recovery initiatives may be met with skepticism, driven by fears of renewed exclusion.

Mitigation Strategy:

Empower the proposed Regional Basin Councils as decentralized and inclusive platforms for environmental implementation. These councils must include locally respected environmental experts and public representatives to ensure legitimacy and local ownership of environmental recovery. Implementation of early wins should be prioritized in historically underserved provinces to demonstrate good faith.

Challenge 3: Resistance from entrenched interests tied to environmental exploitation.

Elements tied to the former regime, including military-industrial entities and politically connected contractors, may resist the enforcement of environmental regulations to protect illicit economic interests.

Mitigation Strategy:

Utilize the proposed legal and technical audit mechanisms to investigate and suspend activities that violate environmental regulations or pose clear conflicts of interest. This mechanism should be empowered with legal authority to halt non-compliant projects and initiate corrective action.

Challenge 4: Fiscal constraints and competing national recovery demands.

The transitional government may face pressure to prioritize immediate infrastructure and economic needs, diverting attention and resources away from environmental recovery efforts.

Mitigation Strategy:

The proposed Environmental Investment Strategy Plan should be developed in the first 180 days to attract early international and diaspora support. In parallel, integrate environmental recovery into broader national stabilization frameworks, such as public health and infrastructure, to justify cross-sectoral budget allocations.

Challenge 5: Limited cooperation on transboundary environmental issues.

Regional tensions may hinder early cooperation in managing shared water resources and ecosystems.

Mitigation Strategy:

Pursue technical cooperation through multilateral frameworks and existing UN environmental platforms as outlined in the International Partnerships roadmap.

Challenge 6: Security risks limiting field access.

Unrest or sabotage may obstruct field operations in high-risk or remote areas.

Mitigation Strategy:

Coordinate with provincial security units to safeguard personnel and use remote monitoring tools via the National Environmental Intelligence Platform, where access is constrained.

13. Water

Introduction

Iran is facing a severe stage of water bankruptcy. This plan outlines a set of brief immediate measures to manage and stabilize the country's water sector amid regime collapse. The objective is to protect essential water services, prevent water-related territorial instability during the transition, and establish a sustainable development framework for future water resources management. It addresses urgent threats, promotes equitable water distribution, and initiates essential reforms under the Transitional Water Governance Sector (TWGS), backed by civil society, the transitional government, independent experts, and international partners.

Objectives

- Ensure uninterrupted access to safe drinking water and basic sanitation for all citizens during the 180-day transition period.
- Secure, protect, and rapidly stabilize critical water infrastructure across the country.
- Establish transparent, accountable, and participatory interim governance (TWGS) for the water sector.
- Lay the technical, legal, and financial foundations for long-term sustainable and equitable water resources management, aligned with international best practices and human-rights standards.
- Foster public trust and civic engagement through clear communication, data transparency, and inclusion of local expertise and civil society.

Phase 0: Pre-Entry Coordination (Before Day 1)

- **Establish Transitional Water Governance Sector (TWGS):** Form a body of experts and technocrats, legally empowered to oversee the water sector.
- **Internal Coordination:** Establish robust communication networks with internal managers and administrators to ensure a smooth transition in the water sector.
- **International Coordination:** Identify key international agencies and contacts for rapid engagement, ensuring timely access to humanitarian and technical assistance when conditions allow.
- **Security Preparation:** Establish secure communication networks and logistical staging points.

Phase 1: Emergency Seizure & Lockdown (Days 1–10)

- **Institutional Control:** Promptly dismiss senior water sector officials tied to corruption, and safeguard key water facilities from sabotage.
- **Infrastructure Security:** Deploy security teams to protect key dams, pipelines, water transfer pipes, and pumping stations in vulnerable regions (e.g., Khuzestan, Central Plateau, Urmia Lake watershed, etc.).
- **Emergency Operations:** Prioritize water supply for hospitals first, followed by drinking water for urban and rural populations, and then provide water resources for essential irrigation activities.
- **Financial Freeze:** Suspend water-related permits, contracts, and subsidies pending rapid audits to halt corruption, while maintaining essential operational expenditures.
- **Groundwater Protection:** Suspend all new groundwater well drilling pending a comprehensive, expert-led assessment of aquifer conditions and the development of a sustainable national management strategy.
- **Organizational Structure:** Maintain the existing organizational structures of the entities fully or partially responsible for the water sector, such as the Ministry of Energy, the Department of Environment, the Supreme Water Council, and the Ministry of Jihad-e-Agriculture in the short term, while preparing a roadmap for future, comprehensive institutional reform.
- **Maintain Key Personnel:** Retain mid-level management personnel in water-related ministries and departments, unless evidence of corruption or conflicts of interest is confirmed.
- **Public Communication:** Initiate national communication to inform the public of stabilization measures, encourage civic cooperation, and build trust.

Phase 2: Stabilization & Assessment (Days 11–40)

- **Reinstate Critical Services:** Prioritize restoring access to drinking water and sanitation facilities. Implement interim agricultural water allocations based on the technical assessment of available resources.
- **Import Key Agricultural Goods:** Align agricultural import policies with immediate water availability, reducing stress on critical water resources and supporting national food security.

- **EIA Requirement:** Perform a nationwide audit of major water infrastructure projects to identify those lacking valid Environmental Impact Assessments (EIAs) or requiring reassessment.
- **Emergency Supply:** Deploy mobile water purification units and water tankers in severely impacted areas such as Sistan and Baluchestan.
- **Personnel Engagement:** Engage and collaborate with experienced engineers, specialists, and technical advisors to strengthen operational capacity.
- **Infrastructure Assessment:** Initiate preliminary assessments of critical water infrastructure to identify urgent needs and priority areas for immediate technical or financial support.

Phase 3: Operational Continuity (Days 41–100)

- **Institutional Security Reform:** Replace regime-aligned security with vetted units under TWGS oversight.
- **Transparency Dashboard:** Issue weekly public updates on water supplies, reservoir levels, and rehabilitation efforts to foster trust and make the national water data repository accessible for public use.
- **IRGC Project Review:** Suspend all major projects under the IRGC Khatam-al Anbiya organization pending comprehensive expert audits.
- **Environmental Compliance Measures:** Suspend water infrastructure projects lacking valid Environmental Impact Assessments, pending formal review.
- **Anti-Corruption Measures:** Publicly disclose water allocations, halt politically driven projects, and initiate documentation of suspected corruption cases in the water sector for future legal action by independent judicial authorities.
- **International Consultation:** Arrange visits from international observers (e.g., UN, World Bank) and water management experts from countries with advanced water sector expertise, such as the USA, Australia, and Israel, to secure financial and technical support.
- **Conflicts of Interest:** Through comprehensive audits, dismiss personnel with conflicts of interest due to profiting from water infrastructure projects or affiliations with military organizations.

Phase 4: Strategic Planning and Institutional Transition (Days 101–180)

- **Governance Transition Roadmap:** Collaborate with key agencies and stakeholders to draft a national water governance roadmap that pilots reduced agricultural self-sufficiency, introduce administrative decentralized management under central oversight, ensure stakeholder participation, transparency, and environmental accountability, laying the groundwork for future legislation and organizational changes.
- **Institutional Reform Planning:** Draft proposed structural changes for water-related ministries and agencies to improve efficiency, transparency, and accountability, without implementing changes prematurely.
- **Economic Purposes:** Foster collaboration among foreign policy agencies, economic ministries, and tourism organizations to develop plans for transitioning from high water-intensive jobs to low or non-water-intensive employment opportunities.
- **Suggestions for Future Constitutional Reform:** Suggest excluding the concept of “self-sufficiency” in food and agricultural products from the written future constitution to improve protection of surface and groundwater resources.
- **Groundwater Management Strategy:** Finalize the national assessment of aquifer conditions and develop a roadmap for sustainable groundwater use to guide future legislation and regulation.
- **Environmental Restoration Priorities:** Identify and document priority ecosystems for post-transition recovery, including Lake Urmia, and degraded watersheds and wetlands, supported by baseline data and restoration concepts.
- **Water Balance Compilation:** Conduct a preliminary basin-level water balance assessment to inform immediate allocation and long-term planning efforts.
- **Legal Framework Drafting:** Develop recommendations for modern water legislation, including provisions on water rights, basin-level management, and public engagement, to support the development of modern environmental and water laws.
- **International Partnership Framework:** Develop a roadmap for long-term engagement with international partners and neighboring countries on transboundary water management, climate resilience, and infrastructure financing.

- **Regional Water Cooperation Scoping:** Initiate technical consultations and diplomatic groundwork for future cooperation with neighboring countries, laying the foundation for structured negotiations on shared water management.
- **National Data Platform Design:** Initiate design and piloting of a centralized, open-source water data system to support future evidence-based decision-making.
- **Procurement Audit:** Launch an initial review of procurement practices in the water sector to identify corruption risks, institutional weaknesses, and areas requiring future transparency safeguards.
- **Water Tariff and Subsidy Review:** Commission a technical analysis of current tariff systems and subsidy policies to highlight inefficiencies, fiscal risks, and equity concerns, informing the design of long-term affordability and sustainability reforms.
- **Investment Strategy Brief:** Prepare a strategic investment briefing outlining critical infrastructure needs, financing opportunities, and priority projects to attract the private sector, donor support, international assistance, and diaspora engagement.

Cross-Cutting Measures

- **Counter-Sabotage Operations:** Deploy inspectors, Police, and security forces, and rapid response teams to detect and prevent infrastructure sabotage.
- **Crisis Preparedness:** Conduct regular scenario-based drills for drought, dam failure, cyberattacks, and disease outbreaks.
- **Economic Stabilization:** Secure international emergency funds to maintain critical water services in coordination with financial transition authorities; temporarily subsidize operations to avoid service disruption.

Strategic Communication

- **Public Outreach:** Implement proactive public communication through regular media interviews, emphasizing transparency and accountability.
- **Community Engagement:** Encourage public participation by establishing channels for reporting issues, promoting water conservation, and supporting localized distribution efforts.

Political and Security Challenges

Iran's turbulent political scene can influence every step of this plan. Power brokers in the interim government-opposition coalitions, ethnic-based movements, and returning expatriates may all want a say over who runs provincial water sectors, dam operations, and emergency funds. Since water control brings both prestige and revenue, these appointments may be fiercely contested, and some factions could even exploit local service disruptions to embarrass their rivals. Long-standing tensions between the capital and outlying regions may add another layer of risk. Provinces such as Khuzestan have long argued that other provinces take their water while ignoring local needs. If early allocations appear unfair, street protests could reignite within weeks, affecting the stability of the transitional government in the short term. External pressures will also complicate the transition. Turkey, Iraq, Afghanistan, etc., share water resources with Iran and may leverage cross-border flows to gain political concessions or deals. Meanwhile, lingering banking restrictions or sanctions could delay donor funds and international support.

A further, politically charged concern is the country's long-standing commitment to food and agricultural self-sufficiency. Decades of state messaging have equated domestic grain production with national pride, but the water bankruptcy makes that goal increasingly unrealistic. Farmers and provincial officials may resist any shift toward importing agricultural products or moving to less-thirsty crops, framing it as a betrayal of sovereignty. Infrastructure sabotage also looms as a real threat in the power vacuum. Disgruntled insiders, organized crime, or extremist factions could target dams, pumping stations, or control systems to gain leverage or discredit the transition authorities. A single deliberate breach or cyberattack could trigger cascading water shortages and public panic. The TWGS will therefore need rapid-response protection units, robust backup systems, and community-based monitoring to detect and neutralize sabotage attempts before they escalate. Finally, remnants of the old establishment—military-linked contractors, managers who once held lucrative desalination, dam constructions, or pipeline deals, and corrupt procurement networks—may look for ways back in. They may spread disinformation or stir local grievances to regain influence. If the TWGS fails to show transparent tendering and honest communication, public frustration could erode its legitimacy and open the door to these actors.

Expected Outcomes

- Continuity of safe drinking water and sanitation services for the population throughout the 180-day transition.
- No major water-related public-health outbreaks or infrastructure failures attributable to mismanagement.

- Verified security and operational status of at least 90% of strategic dams, reservoirs, conveyance systems, and treatment plants.
- A publicly accessible transparency dashboard delivering weekly updates on water supply metrics and key governance decisions.
- Completion of a draft National Water Governance Roadmap, groundwater sustainability strategy, and modern water-rights legal framework ready for legislative adoption.
- Documented audits of legacy projects and procurement practices, with priority corruption cases referred to the judiciary.
- Collaboration with international partners for memoranda of understanding and funding agreements for priority rehabilitation and capacity-building projects post-transition.

14. Healthcare

Healthcare Policy

1. Objectives

- Minimize disruption to Iran's existing healthcare provision and financing system
- Introduce targeted supply-side reforms to immediately enhance affordability and access

2. Key Priorities

- **Collect Insurance Premiums:** The government should continue to collect premiums for SSI (Social Security Insurance) and IHI (Iranians' Health Insurance) to the extent possible. This will lower the chance that the healthcare system will experience a funding shortfall (or reduce its severity in the event it occurs).
- **Maintain Current Subsidies:** To minimize disruptions in the delivery of healthcare services in the short term, the government will maintain the subsidies that it currently provides to the healthcare system (costing ~ 1.5% of Iran's current GDP). These include subsidies to providers, premium-reduction subsidies to individuals purchasing IHI, and government contributions to SSI and other eligible insurance plans.
- **Inject Emergency Funds If Necessary:** The government should be prepared to provide additional funding on an emergency basis to the healthcare system in case its ability to collect premiums in the short term is severely disrupted.

3. Assumptions

- The country's banking and payments system remains sufficiently operational.
- The government will have the ability to borrow funds or release frozen assets in order to provide emergency support to the healthcare system in the event of a severe loss in the government's tax/premium collection capacity.
- The government maintains the ability to enforce location restrictions as they apply to physicians' practice.

4. Actions

- **Halt Enforcement of IMC Price Controls:** The Iranian Medical Council (IMC) acts as an industry cartel that sets minimums for what private providers can charge. Halting the enforcement of those minimums can immediately make healthcare more affordable for millions of Iranians.
- **Eliminate Pharmaceutical Import Tariffs:** These tariffs are usually around 3–4% for drugs without a domestic equivalent and 15–20% for those with a domestic equivalent, but can reach up to 100% in certain cases. Their removal will immediately lower the prices for consumers and alleviate the persistent drug shortage problem that Iranians have experienced under the Islamic Republic.
- **Lift the After-Hours Practice Ban on New Medical Faculty:** The removal of this anti-competitive law will increase the supply of available physicians and enhance affordability and access.
- **More Flexible Practice Locations:** The government will allow physicians to practice freely in all areas for which they meet the current point requirements (i.e., areas with similar levels of economic development). This will allow the supply of physicians to adjust more swiftly to shifting needs while also preventing the urban-rural disparity in healthcare access from rising abruptly. Less restrictive location regulations will also be easier for the government to enforce and allow it to focus its limited enforcement capacity during the transition where it matters most (e.g., rural areas that suffer from severe underdevelopment).

5. Anticipated Political Challenges

Implementing the supply-side reforms outlined in the previous section will likely invite some resistance from special-interest groups. However, the transition period also offers a unique opportunity to overcome such resistance and shift the status quo, considering that:

- The current pharmaceutical oligopoly in Iran is largely under the control of regime-connected figures. As those figures lose their political influence in a post-IR Iran, the removal of protectionist regulations should become easier.
- IMC and similar interest groups will likely find it more difficult to organize and mount political pressure campaigns in the immediate aftermath of a regime change. They will also have a more difficult case to make to the government for the enforcement of their priorities when the transitional government has limited resources and more urgent tasks to deal with.

Healthcare Operations

This document lays out a sequenced, evidence-based roadmap for restoring essential health services in the first 180 days following a regime collapse in Iran. The plan is divided into four phases — each with clear objectives, priorities, actions, and risk-mitigation measures — culminating in the institutionalization of emergency structures into permanent health-sector governance. It is devised based on the worst-case scenario preparedness and benefits from the scientific evidence of other countries' crisis management outcomes.

Emergency Phase Transition Plan (Day 0-180) — Overall Objective

Sequencing relief, stabilization, and institutionalization across a 180-day horizon protects life while signaling a credible pathway toward a sustainable national health service. Such staging mirrors the “emergency-to-early recovery-to-development” framework recommended by WHO and OCHA for complex crises [1].

Preparedness Phase (Day 0 → before Day 1)

Overview

A brief pre-Day-1 window is reserved for constituting two core bodies: the Oversight Committee (OC)—a non-political governance board—and the Disaster & Mass-Casualty Programme (DMCP), an operational trauma-surge cell. Both must align with the WHO Emergency Medical Team (EMT) minimum standards so that incoming foreign teams can plug into Iranian command structures [1]. Evidence from Syria and Libya shows that regions that formed emergency health command posts within 72 hours recorded markedly lower trauma mortality [2][3].

Importance

Transparent, centralized coordination cuts duplication and deters diversion of scarce supplies—a recurrent problem documented in the Syrian conflict, where treatment gaps and medicine shortages accounted for tens of thousands of indirect deaths [2]. Libyan civil-war analyses likewise indicate that early establishment of field command posts reduced case-fatality ratios despite higher injury volumes [3].

Objectives

- The OC sets policy and accountability mechanisms.
- The DMCP drafts triage algorithms, evacuation routes, and surge-staff rosters.

- A nationwide map of ICU, dialysis, and operating-room capacity forms the baseline for a live trauma dashboard.

Key Priorities

- Appoint technically competent OC members, including Iranian diaspora clinicians, and provincial physician leaders from Iran.
- Compile a live inventory of trauma beds and cold-chain nodes to feed an open-data dashboard.
- Pre-stage field-triage modules, trauma kits, and satellite phones at regional airports.

Assumptions

- Core road corridors remain open or can be protected under security arrangements.
- WHO, ICRC, and Red Crescent partners will provide immediate in-kind trauma and IPC support.
- Major public hospitals are structurally intact but need utility restoration.

Actions

Within 24 hours, an executive decree establishes the OC and DMCP with explicit emergency powers; the former Ministry of Health crisis room is reopened as a single coordination node; and fast-track contracts offer hazard pay indexed to inflation for EMS, ICU nurses, and biomedical professionals.

Recommendations

Form an external advisory board of Iranian diaspora experts working closely with Iran's academic experts to guarantee alignment with best practice and bolster international credibility. Adopt the WHO EMT verification checklist as the audit tool for domestic surge teams [1].

Expected Outcomes

By Hour 72, the OC publishes its first situation report; the DMCP holds a national contact roster for trauma facilities; and EMS dispatch lines are live in every provincial capital.

Monitoring & Evaluation

Daily situation reports track ICU beds, blood products, essential medications, and EMS response times, while weekly red-team drills stress-test communications. All data feeds an open-access dashboard to foster public trust.

Political Risks & Mitigation

Competing factions may attempt to capture the OC. Live-streamed deliberations, UN observers, and community-health liaison officers who speak local dialects can blunt these efforts and expand legitimacy beyond the capital.

Phase 1 (Days 1-30) — Medication Flow, Hospital Operations & Infection Control

Overview

The first 30 days focus on reopening hospitals, restarting medicine flows, and deploying infection-prevention teams to communities; logistics outranks long-term reform during this “golden month.”

Importance

Cross-country reviews show medicine stock-outs in the first two weeks of an emergency correlate with sharp spikes in avoidable mortality and antimicrobial resistance [4]. Rapid restoration of surgical capacity also deters clinician flight, as observed in post-2011 Syria [2].

Objectives

- Deliver WHO essential medicines to all 31 provinces, prioritising ICUs and dialysis units.
- Restore baseline services—clean water, power, obstetrics, and surgery—in at least 85 % of public hospitals. Postponing elective surgeries to make operating rooms available for emergency cases.
- Activate infection-prevention teams in communities and camps to monitor disease outbreaks and clusters.

Key Priorities

- Use military and postal fleets for a central “push” distribution model until private wholesalers revive.
- Ensure power and water restoration to flagship referral hospitals as a confidence signal.

- Deploy mobile IPC units with chlorine generators and PPE to high-density communities, camps, and shelters.

Actions

Conduct a 72-hour national warehouse inventory, publish gap lists, and issue blanket purchase orders financed by a pooled donor fund. Provide mixed civil-military escorts for convoys through insecure corridors.

Recommendations

Embed electronic stock-tracking into the OC dashboard; sign rapid-procurement MoUs with Persian Gulf and other international humanitarian agencies; and leverage Iran's postal service and private service providers for last-mile delivery of chronic-disease medicines.

Expected Outcomes

By Day 30, 85 % of hospitals are restocked, EMS covers every provincial capital, and the prohibited black-market medicine prices fall, improving equity.

Monitoring & Evaluation / Political Risks & Mitigation

Daily dashboards track stock levels; third-party monitors such as MSF publish shadow audits. Public heat-maps of deliveries discourage accusations of bias, while emergency customs decrees streamline inspection for WHO-prequalified cargo.

Phase 2 (Days 31-90) — Mental Health Surge, Insurance Continuity & Workforce Allocation

Overview

With immediate mortality curves flattening, the system pivots to psychosocial care, financial protection, and equitable staffing. This phase deploys province-wide Mental Health and Psychosocial Support (MHPSS) teams, launches an Emergency Health-Voucher System (EHVS), and activates a GIS-enabled human-resource registry. To ensure accessibility and sustainability, MHPSS services are further strengthened by integrating 24/7 peer support networks, AI-powered triage tools, and clinician-led supervision systems that dramatically expand the country's reach and capacity for mental, emotional, and social wellbeing.

Importance

Long-term studies of Bosnian war survivors show that untreated trauma triples later disability claims, burdening fragile insurance schemes [5]. Early insurance continuity also reduces catastrophic out-of-pocket

spending, as demonstrated by Rwanda's community-insurance scale-up [9]. However, in many post-crisis contexts, the scarcity of mental health professionals constrains service availability just as population-level psychological need spikes.

Scalable, AI-augmented peer support models address this bottleneck by offering around-the-clock care for low-acuity emotional needs, such as grief, family stress, trauma recovery, and reintegration challenges. Properly trained and clinically supervised peer responders—augmented by natural language processing tools for triage and suicide detection—can extend clinician reach, lower system burden, and provide culturally resonant care at scale.[11]

Objectives & Key Priorities

- Place at least one lead MHPSS team in every province to coordinate service delivery along with the local professionals.
- Operationalize the EHVS to subsidize essential care for six months.
- Use the digital registry to ensure 90 % of the population lives within 30 minutes of EMS or urgent care.
- Train and deploy peer support responders using a 100-day structured curriculum, modeled after the Supportive Academy framework.
- Integrate AI-powered triage and suicide risk detection tools into MHPSS workflows to support faster, safer escalation decisions.
- Embed emotional wellbeing protocols across frontline healthcare and humanitarian response teams.

Actions & Recommendations

Train three-person psychosocial teams (psychiatry specialist/resident, social worker, local nurse) to leverage cultural legitimacy; roll out biometric EHVS cards with mobile-money reimbursement; and publish hardship-bonus postings for underserved districts. Establish a nationwide peer-support infrastructure, operational 24/7 through chat and phone-based access points. Deploy AI-supported triage engines that classify the severity of distress and escalate high-risk users (e.g., suicidality, psychosis, trauma flashbacks) to clinicians in real-time. Build and launch a national suicide prevention hotline capable of routing calls/texts through AI-powered urgency filters to either trained peers or on-call clinicians. Embed PHQ-9 and GAD-7 assessments into digital and in-person support workflows to enable longitudinal mental health tracking. Coordinate with the Oversight Committee to monitor ethical use of AI, supervision coverage, and feedback loops.

Expected Outcomes / Monitoring & Evaluation / Political Risks & Mitigation

By Day 90, national MHPSS coverage is achieved, workforce inequity drops 30 %, and over 70 % of voucher claims pay within seven days. Oversight by the Red Crescent prevents provincial power plays, while mass-media public education campaigns destigmatize mental health care. 24/7 peer support channels are live in all provinces, and suicide hotline services are fully operational. Escalation rates and intervention success are tracked using validated tools and AI-derived emotional pattern monitoring

Phase 3 (Days 91-120) — Urgent-Care Network & Electronic Health Infrastructure

Overview

Phase 3 institutionalizes 24/7 urgent-care centres (UCCs) and rolls out the National Electronic Health-Operations System (EHOS) to modernize data flow and enable predictive analytics. Citizen apps or SMS channels push outbreak alerts and locate nearby services.

Importance

Studies indicate a staffed UCC can cut non-emergency ED visits by 17-40 %, easing tertiary-hospital overload [6][7]. Systematic reviews also show electronic health records halve laboratory redundancy and significantly reduce medication errors [8].

Objectives & Key Priorities

- Ensure 90 % of the population lives within 20 minutes of an operational UCC.
- Achieve live data connectivity from 80 % of facilities.
- Stand-up mirrored, secure servers and distribute QR-coded health IDs.

Actions & Recommendations

Refurbish or erect modular UCCs with point-of-care diagnostics; deploy tele-health pods in sparsely populated areas; build EHOS on open-source DHIS2 (District Health Information Software 2) / OpenMRS (Open Medical Record System); and publish anonymized datasets to crowd-source outbreak detection.

Expected Outcomes / Monitoring & Evaluation / Political Risks & Mitigation

By Day 120, 80 % of facilities report electronically, and citizens receive SMS alerts within 10 minutes of outbreak verification. Encrypted cloud backups guard against cyber attacks, while paper-digital hybrids cover low-connectivity districts.

Phase 4 (Days 121-180) — Reassessment & Reinforcement of OC, DMCP, Supply Chains & Digital Systems

Overview & Importance

The final phase converts emergency scaffolding into permanent institutions. Comparative evidence from Estonia and post-genocide Rwanda shows that post-crisis gains survive when embedded in clear legal mandates backed by stable financing, quadrupling five-year sustainability [10][9].

Objectives & Key Priorities

- Conduct independent audits of the DMCP, OC, and national supply chains.
- Table a Transitional Health-Governance Bill enshrining OC independence and setting accreditation standards.
- Expand EHOS to chronic-disease and maternal modules, and run a national DMCP chemical/biological drill.

Actions & Recommendations

Finalize long-term data-hosting agreements; build a national cyber-security operations centre for health data; and launch an online public consultation to shape post-transition health priorities.

Expected Outcomes / M&E / Political Risks & Mitigation

By Day 180, the OC is legally recognized, digital platforms handle at least 80 % of national health operations, and EMS is codified within civil-protection law. A public 180-Day Report will feed into a national academic and public health conference, while staggered funding asks tied to audited milestones minimize fatigue and data-privacy clauses shield against partisan capture.

15. Macroeconomic and Financial Stabilization

The Macroeconomic and Financial Stabilization section outlines the core strategies for restoring Iran's economic functionality during the transitional period. It focuses on reasserting control over fiscal institutions, stabilizing the banking system and monetary framework, and rebuilding the integrity of financial markets. These efforts are essential to prevent economic collapse, maintain fiscal and monetary stability, preserve consumption and investment, and create the foundation for credible reform and long-term recovery.

This section is organized into three interrelated areas—fiscal policy, banking and monetary stabilization, and financial market restructuring. While each area requires targeted interventions, they share a common goal: restoring public and investor confidence in the state's ability to manage the economy. The subsections below lay out clear objectives, priorities, and actions, along with monitoring mechanisms to ensure effective implementation and accountability.

It is important to note the Central Bank of Iran (CBI) performs two critical and distinct roles that are particularly relevant during the transition period. First, as the monetary authority, the CBI is responsible for conducting monetary policy, managing inflation, stabilizing the exchange rate, and regulating the banking sector. Second, and less commonly seen in advanced economies, the CBI also acts as the fiscal agent and account holder of the Treasury, responsible for processing government payments, disbursing subsidies and pensions, and maintaining the operational flow of public expenditures. This dual role means that control over the CBI is not only essential for macroeconomic stabilization but also for ensuring the continuity of basic state functions and household consumption. In the following sections, references to the CBI will depend on the context: its fiscal agent role is discussed under Fiscal Policy, while its monetary authority role is examined under Stabilizing Banks and Money. In the short run, immediately following the collapse of the regime, these dual roles are not expected to change dramatically and will remain in place until the necessary steps are taken to modernize both fiscal operations and monetary policymaking under a future constitutional framework.

Fiscal Policy

Overview

This transition plan outlines the strategic approach for stabilizing Iran's fiscal policy during the transitional period, focusing on securing control over public finances, maintaining essential government functions, and reestablishing administrative and international legitimacy. The plan aims to implement immediate, actionable steps that preserve core state outlays, prevent institutional collapse, and create the fiscal space necessary for recovery and reform.

Importance of Fiscal Policy Stabilization

Stabilizing fiscal policy is crucial during the transition period, as it enables the government to maintain regular payments, fund critical services, and assert sovereignty over national resources. Without clear fiscal control, disruptions to pensions, subsidies, and administrative operations could erode public confidence and exacerbate economic instability. A credible and functional fiscal framework is also a prerequisite for reengaging with international institutions and unlocking frozen assets.

Objectives:

- Establish economic and administrative stability.
- Assert state sovereignty.
- Preserve basic functions during Iran's transitional phase.

Key Priorities:

- Control fiscal and monetary institutions.
- Securing essential public spending.
- Streamline the administrative state as much as feasible.
- Reestablish basic international economic relations.

Assumptions:

- Widespread political consent for the transitional government.
- Sufficient support among middle managers of ministries and agencies.
- No credible alternative entity to challenge international legitimacy.

Actions:

Economic Stabilization:

- **Control Fiscal Institutions:** Secure the Central Bank of Iran (CBI) role as the fiscal agent and account holder of the Treasury to maintain regular government payments and preserve private consumption (~50% of GDP), including through public subsidies on essential goods.
- **Capital Controls on Public Institutions:** Temporarily imposed to prevent capital flight and secure assets of former regime affiliates.
- **Domestic Debt Issuance:** Issue bonds through local financial institutions to cover short-term budgetary gaps.
- **Support Existing Pensioners:** Ensure minimal disruption for current pensioners, prepare for a Fully Funded Defined Contribution (FDC) system

International Relations:

- **Seek International Recognition and Access to Frozen Assets:** Secure formal recognition of the transitional government by key global actors (e.g., the U.S., EU, China, IMF, UN) as a prerequisite for

unlocking \$120–150 billion in frozen reserves and initiating access to international funding (e.g., IMF lending programs).

- **Deploy Emergency Funds Strategically:** Use recovered assets to stabilize the financial sector, finance urgent government operations (including pensions and subsidies), and restart oil and gas exports to restore fiscal capacity.
- **Re-engage with Global Standards and Institutions:** Begin formal negotiations with international financial institutions and regulatory bodies (e.g., IMF, World Bank, FATF) to rebuild credibility and reenter the global financial system. Engage with the three major credit rating agencies (CRAs) – Fitch, Moody's, and S&P – to obtain sovereign credit ratings. This process requires certain legal and institutional reforms, including dismantling ideological institutions, as will be discussed in more detail in the next subsection.

Administrative Streamlining:

- **Downsize Ideological Institutions:** Dismantle or significantly reduce the scope of entities tied to the former regime to ease fiscal burdens and signal institutional reform. This includes dismantling the Exchange High Council of Iran (SEHC) and phasing out mandatory adherence to Islamic finance frameworks, which have constrained market development and transparency.
- **Consolidate and Reform State-Affiliated Entities:** Merge redundant or parallel ministries and agencies to improve administrative efficiency. In particular, Bonyads—quasi-state foundations with vast untaxed holdings—must be downsized, brought under formal oversight, and subjected to taxation to ensure fiscal accountability.
- **Defer Major Structural Reforms:** Postpone deep constitutional or systemic overhauls until a legitimate, democratically elected government is in place and empowered to undertake such changes with broad-based political support.

Recommendation:

Act swiftly, prioritizing:

- Securing fiscal control.
- Seeking international recognition.
- Initiating modest but credible administrative reforms.

- Monitor financial stability and public sentiment closely to adjust policies as needed.

Expected Outcomes:

- Prevent economic collapse, stabilize inflation, and maintain public confidence.
- Unlock critical funds and trade opportunities by reestablishing international engagement.
- Reduce costs and lay the groundwork for long-term governance reforms through administrative streamlining.

Monitoring and Evaluation:

- **Budget Execution and Fiscal Balance:** Monitor revenues, expenditures, and the overall fiscal balance on a monthly basis, including the use of domestic debt instruments and emergency funds.
- **Government Payment Continuity:** Track the timeliness and completeness of key government payments, including wages, pensions, and subsidy transfers.
- **Public Sector Spending Efficiency:** Measure the share of spending allocated to essential functions versus legacy or ideological institutions, and assess the pace of administrative consolidation (e.g., ministry mergers, Bonyad reforms).
- **Access to External Resources:** Monitor progress toward unlocking frozen assets and securing short-term financing from multilateral institutions.

Stabilizing Banks and Money

Overview:

This transition plan outlines the strategic approach for stabilizing banks and money during the transitional period, focusing on reestablishing monetary authority, stabilizing bank operations, restoring public and foreign confidence, safeguarding financial integrity, and deploying emergency liquidity as needed. The plan aims to implement actionable steps that facilitate a smooth transition while addressing immediate challenges.

Importance of Stabilizing Banks and Money

Stabilizing Banks and Money is crucial during the transition period, as it ensures economic stability, access to financial services, and boosts public confidence, which are essential for national recovery and growth.

Without re-establishing the central bank's authority and maintaining banking operations, savings erode, capital flight accelerates, inflation surges, and trust from both domestic investors and the international community collapses.

1. Objectives

- a.** Assess banks' health and deploy emergency liquidity support.
- b.** Maintain banking operations and payment system continuity.
- c.** Restore confidence among the public and foreign counterparties in Iran's banking system, and safeguard financial integrity.

2. Key Priorities

- a.** Reestablish operational control over the Central Bank of Iran and national payment systems to ensure continuity of banking services and prevent financial disruption.
- b.** Restore monetary policy credibility by empowering an independent central bank to address inflation and transition to a flexible exchange rate regime.
- c.** Safeguard financial system integrity through temporary capital controls and asset freezes targeting politically exposed persons and regime-linked entities.
- d.** Mobilize external financial resources by securing international recognition and access to frozen assets to stabilize the financial sector and rebuild confidence, including through reestablishing links to global financial systems such as SWIFT and compliance with FATF standards.

3. Assumptions

- a.** Functioning transitional authority with control over key institutions (Central Bank of Iran (CBI), the Ministry of Economy and Financial Affairs (the Treasury), major banks).
- b.** Relative stability with no active war and a peaceful or contained transfer of power, preserving core infrastructure.
- c.** Access to financial infrastructure, including payment systems, CBI facilities, and communications.
- d.** Openness to international engagement, including potential recognition by major powers.

- e. The path to sanctions relief or legal access to frozen assets is available or negotiable.

4. Actions

Leadership and Institutional Control

- Appoint a new CBI Governor, an interim Treasury Secretary, and caretaker administrators for public and private banks.
- Secure physical and administrative control over the Central Bank of Iran and the national payment infrastructure.
- Establish a financial stabilization task force to coordinate banking operations, liquidity management, and public communication.

Monetary and Banking System Stabilization

- Grant the CBI operational independence to set interest rates, manage liquidity, and implement anti-inflation policy.
- Restricting liquidity growth (M2) by limiting the growth of the banking sector's balance sheet and eventually raising interest rates to counter inflationary pressures.
- Reform the Foreign Exchange Market by consolidating the current multiple exchange rates into a dual-rate system as a transitional step. This approach can help stabilize the currency and prioritize essential imports in the short run, while maintaining capital controls to preserve reserves.
- Maintain uninterrupted banking and payment services to support private consumption and public sector operations.
- Issue domestic bonds via local financial institutions to address short-term budget deficits.

Financial Integrity and Controls

- Provide 100% deposit insurance for retail and commercial accounts for the first 100 days, with withdrawal limits.
- Implement temporary capital controls to restrict outbound financial flows.
- Freeze large foreign currency accounts linked to regime affiliates, public institutions, and politically connected persons.

- Flag and scrutinize high-value transactions (e.g., above \$1 million).
- Prohibit insider transfers and fire sales of assets by regime-linked entities.
- Coordinate with foreign jurisdictions (e.g., China, UAE) to freeze and protect Iranian public assets abroad.

5. Recommendations

- Act swiftly to establish control over fiscal and monetary institutions to prevent systemic collapse.
- Prioritize leadership appointments in financial institutions to signal stability and technocratic governance.
Use capital controls and asset freezes strategically to safeguard national wealth while allowing time for legal investigations.
- Focus early actions on deposit guarantees and payment system continuity to maintain public confidence.
- Seek international recognition (from the US, EU, China, IMF, UN) to unlock access to \$120–150 billion in frozen reserves.
- Use emergency funds to stabilize the banking system, support fiscal operations, and reinstate trade in oil and gas.
- Begin diplomatic engagement with multilateral institutions to rebuild Iran's credibility in global financial markets.
- Defer large-scale structural or constitutional reforms until a democratically elected government assumes office.
- Downsize ideological or parallel institutions to signal reform and reduce fiscal burdens.
- Continuously monitor public sentiment and financial conditions to recalibrate measures in real time.
- Hiring external auditors to conduct a comprehensive audit of financial institutions and their financial statements and meanwhile placing a regulatory capital forbearance policy.

- k. Tasking CBI with a dual mandate: price stability and financial stability. Anchoring its policies around the three main pillars of modern central banking governance: independence, transparency, and accountability, supported by regular public reporting.

6. Expected Outcomes

- a. Stabilized banking operations and uninterrupted financial services.
- b. Reduced inflation and currency volatility through credible monetary policy.
- c. Increased public confidence in financial institutions via guarantees, transparency, and leadership change.
- d. Prevented capital flight and asset stripping through targeted controls and asset freezes.
- e. Secured access to financial resources by protecting public assets and reengaging internationally.
- f. Established groundwork for long-term reform under future elected leadership.

7. Monitoring and Evaluation

Metrics for Success:

- Appointment and activation of key leadership positions (CBI Governor, Treasury Secretary, bank administrators)
- Inflation rate and policy rate changes.
- Growth of money supply (M2)
- Growth of the banking system's balance sheet.
- Exchange rate volatility
- Percentage change in volume of bank deposits
- Operational status of bank branches, payment system, and ATMs
- Outbound capital flow volume
- Value of regime-linked assets secured domestically and abroad

- Progress in unlocking and utilizing frozen foreign assets

Review Process:

- Weekly transition authority meetings with published agendas and decisions
- Regular public disclosure and leadership appointments, mandates, and transitions
- Monthly monetary and financial stability reports from the CBI and treasury
- Periodic public updates on banking access, deposit insurance, and reform progress
- Monthly tracking of frozen assets abroad and progress on international legal cooperation

8. Anticipated Political Challenges

Challenges:

- Resistance from former regime loyalists
- Bureaucratic inertia and institutional fragmentation
- Lack of political consensus on reform priorities
- Public distrust and political volatility
- Interference in technocratic institutions

Mitigation Strategies:

- Secure institutional control and physical access
- Appoint clear and credible transitional leadership
- Establish a centralized economic command structure
- Build political and public communication channels
- Deter structural reforms and focus on stabilization consensus

Stabilizing Financial Markets

This transition plan outlines the strategic approach for stabilizing Iran's financial markets during the transitional period, focusing on preventing systemic disruption, restoring transparency, protecting national wealth, and rebuilding investor confidence. The plan aims to implement actionable steps—such as targeted market closures, foreign exchange reform, and phased reopenings—while addressing immediate risks of capital flight, asset mispricing, and institutional breakdown.

Importance of Stabilizing Financial Markets

Stabilizing the financial market is crucial during the transition period, as it ensures effective capital allocation, investor confidence, and the emergence of real and meaningful prices, all of which are essential for restoring economic stability and enabling national recovery and growth. Without stabilization, market volatility, distorted pricing, and capital flight could undermine broader reform efforts and delay economic normalization.

1. Objectives

- a.** Prevent systemic disruption in financial markets.
- b.** Ensure accountability and investor protection.
- c.** Stabilize and rationalize the foreign exchange market.
- d.** Reopen and normalize financial markets.

2. Key Priorities

- a.** Prevent market disruption by temporarily closing vulnerable market segments (e.g., equity and corporate debt markets) to avoid panic-driven selloffs and insider asset stripping.
- b.** Conduct audits, reassess asset valuations, and strengthen governance, disclosure, and regulatory frameworks before market reopenings.
- c.** Reopen financial markets selectively, beginning with the Treasury market under transparent issuance procedures, followed by phased equity and debt market reopenings tied to reform benchmarks.

3. Assumptions

- a.** Functioning transitional authority with control over financial regulatory institutions, including the Securities and Exchange Organization.
- b.** Relative stability with no active war and a peaceful or contained transfer of power, preserving core infrastructure.
- c.** Sufficient physical and digital control of financial infrastructure, including the Tehran Stock Exchange, trading systems, and market data platforms.
- d.** Availability of technocratic expertise to conduct audits, manage capital controls, and oversee market reform.
- e.** International channels are open for coordination on asset freezes, capital monitoring, and eventual reintegration into global markets.

4. Actions

- a.** Appoint new leadership at key financial market institutions, including the Tehran Stock Exchange, Securities and Exchange Organization, and Capital Market Development Fund, to ensure credible oversight and policy alignment.
- b.** Temporarily suspend trading on the Tehran Stock Exchange (TSE) for 90–180 days to prevent panic selloffs and enable audits.
- c.** Close the corporate debt market for 100 days due to illiquidity and lack of pricing integrity.
- d.** Conduct independent audits and valuation reassessments of listed companies and publicly traded financial instruments.
- e.** Implement a dual exchange rate system, with a managed rate for essential imports and a floating rate for other transactions.
- f.** Enforce capital controls to prevent outflows linked to former regime affiliates or illicit wealth holders.
- g.** Resume Treasury market operations within 30 days, prioritizing short-term instruments and requiring full disclosure of yields and maturities.

- h.** Establish investor protection rules before market reopenings, including enhanced disclosure, governance standards, and insider trading restrictions.
- i.** Set benchmarks and conditions for phased market reopenings, linked to transparency, legal reform, and audit completion.
- j.** Coordinate with international financial institutions and market regulators to align post-transition reforms with global standards.

5. Recommendations

- a.** Act swiftly to suspend vulnerable markets to prevent disorderly selloffs and preserve asset value during the early transition period.
- b.** Prioritize transparency and legal safeguards before reopening any financial markets to ensure integrity and investor protection.
- c.** Use the Treasury market as a credibility anchor, reopening it early under strict disclosure and pricing standards.
- d.** Phase reopenings based on verifiable benchmarks, such as completion of audits, establishment of investor protections, and regulatory readiness.
- e.** Maintain capital controls until asset tracing and legal reviews are complete, especially for politically exposed persons and regime-linked entities.
- f.** Engage international partners to align financial reforms with global standards and attract future capital inflows.
- g.** Defer complex financial liberalization or structural reforms until a constitutionally elected government is in place.
- h.** Communicate consistently and publicly to manage expectations and build trust with domestic and international investors.

6. Expected Outcomes

- a.** Avoided financial market collapse through timely closures and capital flow controls. Preserved national wealth by preventing insider selloffs and illicit capital outflows.

- b. Restored investor confidence via enhanced transparency, regulatory safeguards, and credible leadership.
- c. Stabilized foreign exchange flows through a dual-rate system and targeted FX market reforms.
- d. Improved market integrity through audits, legal reform, and governance restructuring.
- e. Phased return to market functionality, beginning with the Treasury market under credible pricing and disclosure.
- f. Strengthened international credibility, laying the foundation for post-transition capital market reintegration.

7. Monitoring and Evaluation

Metrics for Success:

- Appointment and public disclosure of new leadership at TSE, Securities and Exchange Organization, and related bodies
- Operational status of key market infrastructure (trading platforms, data systems) and market segments (TSE, corporate debt, Treasury)
- Completion of external audits and asset valuation reviews
- Adoption of investor protection and disclosure regulations
- Daily exchange rate spread between official and floating rates
- Volume of FX transactions processed under each rate
- Volume of outbound capital transactions blocked or reviewed
- Number and value of accounts frozen or flagged for legal action
- Progress in legal review of regime-linked financial holdings
- Trading volume and participation after phased reopenings
- Bond yield curve publication and market responsiveness

Review Process:

- Weekly transition authority meetings with published agendas and decisions
- Regular public disclosure and leadership appointments, mandates, and transitions
- Regular bulletins on market conditions, policy changes, and reopening timelines
- Monthly transparency reports on audit progress, capital control enforcement, and FX operations.
- Third-party audits of valuation, financial disclosures, and regulatory compliance
- External advisory board to review market reopening conditions and benchmarks
- Standardized internal reporting from market institutions to the transitional authority
- Investor engagement sessions to gather input and communicate reform milestones

8. Anticipated Political Challenges

Challenges:

- Resistance from Former Regime Loyalists
- Bureaucratic Inertia and Institutional Fragmentation
- Lack of Political Consensus on Reform Priorities
- Public Distrust and Political Volatility
- Interference in Technocratic Institutions

Mitigation Strategies:

- Secure institutional control and physical access
- Appoint clear and credible transitional leadership
- Establish a centralized economic command structure
- Build political and public communication channels
- Deter structural reforms and focus on stabilization consensus

Privatization

Overview

While immediate privatization of assets owned by the government and semi-government organizations may not be feasible in the emergency phase following the fall of the Islamic regime, it is critical that the transitional government establish a clear and effective framework to stabilize these assets and prepare them for eventual reform.

1. Objectives

The focus during this interim period must be on

- Securing public property
- Restoring transparency
- Ensuring operational continuity

These steps are essential not only for rebuilding trust in public institutions but also for laying the groundwork for long-term economic recovery and sustainable privatization.

2. Key Priorities

The following measures should be taken promptly:

- Taking control of assets, safeguarding, and recordkeeping
- Removing political appointees from SOEs and appointing interim management
- Maintaining the operations of productive enterprises
- Hiring accounting/auditing firms to oversee past transactions, monitor ongoing finances and perform full risk assessment
- Assessing liabilities and preserving enterprise value
- Defining a prioritization framework for privatization

3. Assumptions:

- Mostly peaceful transition

- Minimal physical damage to the economic infrastructure

4. Actions:

- Create a comprehensive list of SEOs, including all government and semi-governmental organizations, foundations, religious endowments, and related entities.

Assert full administrative control over SEO assets

- Physical Property
- Digital Records
- Financial Holdings
- Corporate Shares
- Other Investments

Establish a transparent and centralized system of recordkeeping to protect assets, prevent misappropriation, and facilitate future restructuring.

Remove key leadership positions (political appointees) within SOEs and public institutions and sever their influence. This ensures restoring professional integrity.

Appoint interim management teams, composed of qualified technocrats, industry experts, and neutral civil servants. Their primary responsibility is to maintain institutional stability and transparency until permanent, merit-based leadership structures can be implemented.

- Maintain the operation of Entities with positive economic output without any disruption.
 - Mandate the interim management to maintain production levels, fulfill existing contracts, and safeguard employment during the emergency phase. Doing so will help minimize economic shocks, maintain public confidence, and reassure domestic and international partners that the country's economic infrastructure remains functional despite the political transition.
- Appoint independent and reputable accounting firms—domestic and international—to oversee past and future transactions.
- Mandate the accounting firms to conduct forensic audits of major SOEs and foundations to uncover past corruption, embezzlement, fraudulent contracts, dangerous exposures, or illicit asset transfers.

- Mandate accounting firms must provide real-time oversight of financial operations during the transition to detect and prevent ongoing mismanagement. Their work will support accountability, inform future legal action, and lay the groundwork for permanent transparency mechanisms.
- Mandate accounting firms to identify the full extent of liabilities held by SOEs, with the aim of preventing the government from inheriting bottomless financial exposure. Their mandate should be to chart a path forward that preserves the operational and economic value of these enterprises while minimizing future fiscal risk to the state.
- Develop a strategic framework and priority list to guide the order and method of privatizing state-owned assets. This framework should prioritize enterprises based on their potential to maximize economic value, minimize disruption to the economy, and avoid rewarding or embedding loyalists of the former regime. Privatization should be carried out in a transparent, phased, and deliberate manner that supports the broader goals of economic renewal and justice.

Pensions

Objectives

- Ensure minimal disruption for current pensioners
- Implement reforms to improve the governance and fiscal sustainability of the current system before the eventual transition to a Funded Defined Contribution (FDC) system

Key Priorities

- **Collect Pension Contributions:** The government should continue to collect contributions to the existing pension funds (including SSO, CSPF, etc.) to the extent possible. This is necessitated by the pay-as-you-go (PAYG) nature of those funds, where payments to current pensioners are financed by the contributions of current workers.
- **Support Existing Pensioners:** Maintain the payment flow and make the necessary adjustments for inflation.
- **Inject Emergency Funds If Necessary:** The government should be prepared to provide additional funding on an emergency basis to the pension system in case its ability to collect contributions in the short term is severely disrupted.

Assumptions

- The country's banking and payments system remains sufficiently operational.
- The government will have the ability to borrow funds or access frozen assets (at least partially) in order to provide emergency support to the pension system in the event of a severe loss in the government's tax collection capacity.

Actions (Recommended by The World Bank)

- End All Lending to the Government: Pension funds should not be used as lenders of last resort to the government, but act in the best interest of their beneficiaries.
- **Halt Asset Transfers Made in lieu of Government Debt Payments:** The Islamic Republic has developed a habit of transferring unprofitable public companies at highly inflated valuations to pension funds instead of honoring the government's debt obligations to those funds. This process must be immediately stopped.
- **Reinstate the High Council for Social Security:** The High Council for Social Security was a tripartite body made of government representatives, worker representatives, and employer representatives that was abolished in 2010. It was tasked with appointing the Board of Directors of the SSO. Reinstating the Council will enhance independent oversight over the activities of the SSO.
- **Require Relevant Expertise for Board Membership:** Newly appointed board members of the SSO and the other funds currently supervised by the Ministry of Cooperatives, Labor, and Social Welfare (MCLSW) will be required to possess relevant expertise and follow fiduciary obligations to plan beneficiaries.

Monitoring and Evaluation (Recommended by The World Bank)

- The first external audits of the pension funds currently under the supervision of the MCLSW (SSO, CSPF, AFPF, and RNPF) will be conducted at the earliest opportunity (if possible, by international accounting firms) and repeated on a periodic basis.
- The central bank will become the independent custodian of those funds "to ensure the physical and legal integrity of the assets and to oversee the transactions of the assets manager" (World Bank, 2003).
